The Seljuk kingdom was therefore the germ of the future Ottoman empire. We also find that the buildings erected by the Seljuks of Rūm (*i.e.* the kingdom of Konia) are the first which exhibit the union of Persian and Syro-Egyptian influences still distinct and even widely differing in these buildings. These are the influences the fusion of which with the constructive traditions of Byzantine architecture produced the striking art of the Turkish buildings of Brūsa, Adrianople, and Constantinople. For this reason we should study them first. We find, in fact, in the buildings of Konia, Syrian features in the porches, the small columns joined together, the niches, the stalactites, and those long girths ornamented with eight-rayed half-stars which we see so frequently in buildings of the 13th cent. in Syria, and especially at Damascus. However (what we do not find in Syria, while the buildings of Konia and its neighbourhood show us numerous examples of it), there are various applications of enamelled earthenware and brick to the interior decoration of the buildings, and even to some interior elevations of them, such as that of the inner court of the Sircheli Madrasa at Konia. This, with its enamelled facings, seems to be a Persian building transplanted bodily to Konia, although the porch of its exterior façade is entirely of stone, and of a very decided Syrian style.

When the Turkoman tribes arrived in Asia Minor after a long sojourn and long wanderings in Persia, they imported thither the industries necessary to the life of nomad communities: saddlery and the manufacture of cloths, of carpets, and of embroideries. This art of the nomads has influenced in a very high degree not only the extremely original decoration of the mosque of Inje-Minareli at Konia, but still more the striking north gate of the great mosque of Divrigi, the complicated ornamentation of which is distributed over the whole façade in an arbitrary and unsymmetrical way (cf. Saladin, *Manuel*, fig. 335). Some of these mosques, like that of Ala-ud-din at Konia, or that of Echrif-Rūm-Jami at Beishehr, or, again, that of Houen at Kaisarīya, are arranged on plans with aisles like the ancient mosques of Egypt or of the Maghrib. Others are *madrasas* with their *līwāns* arranged crosswise, *e.g.* the Sircheli Madrasa at Konia, the Ibrāhīm Bey Madrasa at Akserai, the *madrasas* of Sivas and of Erzerum, etc. We find caravanserais also as in Persia, but with an entirely different plan. These caravanserais rather recall the plan of the Roman or Byzantine *castellum*, comprising, as they do, storehouses, dwelling-rooms, and stables. One of the most imposing of these buildings is the Sultan Khan, north-east of Konia, all the details of which have been carried out with remarkable skill. Its enclosure is strengthened by enormous buttresses, which reveal more decidedly than usual its defensive character, but a magnificent porch which adorns the entry prevents it from presenting too forbidding an appearance. This doorway is still quite Syrian in character; nevertheless we can already trace in it the chief tendencies which, modified and brought to perfection by the architects of the Green Mosque at Brūsa and of the Bayazidīya of Constantinople, evolved those splendid porches of the most ancient Turkish mosques. In the middle of the court a small square building serves as a mosque, representing the *Khuda Khane* of the Persian mosques. The interior decoration of this caravanserai is reduced to its most simple expression, as befits a building erected for public use. But these caravanserais no longer follow the Persian plan at all, while on the other hand the *madrasas* or mosque-*madrasas* still draw their inspiration from it. But at Erzerum, for example, the plan of the madrasa is doubled by a long nave, at the end of which is a tomb (Imaret Ulu Jāmi' or Chifte Minaret; cf. Texier, *Arménie, Perse, et Mésopotamie*), and assumes almost the appearance of a church-nave preceded by a hall surrounded with dwelling-rooms. In this case we must trace in it a Byzantine tradition.

As to the mausoleums, or tombs, they share as much in the Persian as in the Armenian tradition (cf. the tombs of Akhlat; see Lynch, *Travels in*

Armenia, ii. 181 f.). It is certain that Armenia also exercised a very strong influence on Seljuk architecture. The chief reasons for this will be found in the present writer's *Manuel*. We might, therefore, sum up the character of Seljuk art by describing it as a mixture of Persian, Syrian, and Armenian art. The fact is completely explained by the geographical position of Konia (Iconium). We may remark, moreover, that as we travel northwards the Seljuk buildings assume an uncouth and heavy style of decoration which seems to be strictly due to the predominance of Armenian influence; on the other hand, the more we approach the south, the more Syrian influence reveals itself by its refinement, distinction, and exactitude. The harmonious collocation of forms of stone architecture and of enamelled decoration did not at once reach complete perfection. It is easy to understand that brick architecture and stone architecture, which proceed from entirely different starting points, and consequently have quite distinct characters, could be harmonized only after many bungling attempts and trials. One of the most interesting of these is that made by the architects of the Ottoman sultans at Brūsa. The Yeshil Jāmi', or 'Green Mosque,' presents, in fact, a very homogeneous exterior harmony of marble architecture: a great porch opens on a façade pierced with windows and grooved with niches; the porch is still the Seljuk porch, but simplified, corrected, and admirably crowned by a kind of half-dome in stalactites; the latter is encircled by very fine arabesques, which are themselves set, as is the entire porch, in a majestic door-frame decorated with sculptures and inscriptions in magnificent characters. The interior is completely decorated with faience mosaics of the greatest beauty. The *miḥrāb*, entirely of enamelware, is very lofty, and the general impression made by it recalls a little that of a great Seljuk doorway; the walls are decorated with a ceramic panelling surmounted by a magnificent frieze, and the inner wall of the mosque opposite the *miḥrāb*, which is generally bare of decoration, here assumes a singular importance by reason of two great *līwāns* on the ground floor, and a fine alcove on the first floor, all entirely executed in very beautiful enamelwork. The plan of this mosque at Brūsa, although rendered totally different from those which we have already studied by a very skilful use of large cupolas, recalls, although in an imperfect manner, the cruciform plans of the *madrasas*, because of these two lateral *līwāns* which flank the chief cupola. This enamel decoration is still Persian in its workmanship and suggestion, and even the first secular buildings of Constantinople, such as the Chinli Kiosk, built at the Seraglio in 1466, in their plan and appearance are still altogether Persian.

At the time of the occupation of Constantinople by the Turks, however, the influence of the Byzantine buildings immediately made itself felt on the productions of the Sultans' architects who built for them their first mosques. Thus the mosque of Sultan Bayazid, commenced in 1497, reproduces on a small scale the plan of St. Sophia at Constantinople, *i.e.* its main characteristic is a great cupola resting on pendentives, supported in front and behind by two large demi-cupolas of equal radius. But this mosque is already distinguished from the mosques of Brūsa by a correction in the plan, and in the general arrangement of the outer and inner parts, a correction which shows an art already completely master of its methods. This art, now that it has been able to borrow from Byzantine art the chief element of structural arrangement, may be regarded as complete, for till the conquest of Byzantium the mosques did not possess that character of boldness, exactness, and definiteness which an architectural work must possess in order to rank among works of art. As long as the plan is undetermined, the work of architecture cannot be considered as complete.

The Turkish mosque consists, then, of a praying place properly so called—a large rectangular hall covered by an enormous cupola supported by two large demi-cupolas. The *miḥrāb* of marble or of enamel-work faces the entrance. Coloured panes set in plaster traceries light the mosque. The Turkish mosques are much the best lit of all, even when nearly all their glass panes are preserved, which is not often. In front of the mosque is a court surrounded by porticoes; in the centre a fountain, the φιάλη of the Byzantine churches, and commanding the four corners of the court, gigantic minarets like monolithic pillars crowned by a pointed roof. Such is the type of the Ottoman mosque from Bosna-Serai to Cairo.

From this time Ottoman art made giant strides, and the wonderful great mosques, the outlines of which still in our day adorn the capital of Turkey, are erected one after another. Such are the mosque of Muhammad II.; that of Sultan Selim; the Sulaimanīya, or mosque of Sulaimān the Magnificent, with its court surrounded with porticoes, its four minarets, its colossal dome supported by four enormous pillars, its great antique columns of porphyry and syenite seized from the Imperial palaces, its coloured panes and its enamel-work; the mosque of Shahzada; that of Sultan Ahmad, the largest of all; and the Jāmi' of Yeni Valideh, one of the finest.

Sulaimān's architect, the celebrated Sinan, is the builder of the finest mosques raised during the reign of the great legislator, but his masterpiece is perhaps not at Constantinople; it is possibly his last work, the Selimīya of Adrianople, which is the most perfect of all, with the extreme simplicity of its plan, the harmony of its proportions, and the perfection of its outline. Unfortunately the decadence of this fine art was rapid; contact with Western art was fatal to it. Already in the mosque Nur-i-Osmanīya (1748–55) we see the introduction of European elements into Ottoman architecture. That intermixture, which perhaps in skilful hands might have been able to bring about a happy modification of Turkish art, was left in the hands of second-rate French or Italian architects. These, by their unskilfulness, rapidly brought about the decay of that art which had produced such great masterpieces.

A few words remain to be said on other architectural works. The Ottomans built numerous schools, madrasas, and monasteries, or *takīyas*. These are generally occupied by dervishes of the Mevlevi order, who played such an important part at the commencement of the history of the Ottoman empire, and do so still in a quiet way, since it is their Grand Master who at the consecration of each Sultan girds the new sovereign with the Prophet's sabre in the old mosque of Ayyūb. Frequently the architecture of these buildings is affected by local traditions, and their case differs from that of the mosques which from the commencement of Sulaimān's reign were all erected on plans derived more or less directly from the types invented by Sinan.

The tombs of sovereigns and of great personages are influenced more or less, as regards their plan, by the use of the cupola. To give a list of them here would be tedious. We shall mention especially those which are near St. Sophia, those of the sultans Selim, Murad, and Muhammad IV., that of Sultan Ahmad, and, above all, those of Sulaimān and Roxalana, near the Sulaimanīya. Turkish tombs are often simplified to mere stelæ, but it

also happens that these stelæ, passing through stages of increasing richness of decoration, are evolved into monuments luxuriantly gilded and carved, which are sheltered under kiosks or cupola-crowned pavilions.

From their ancient nomad life the Turks have preserved a love of nature and of gardens; they regard the houses or palaces they erect only as transitory dwellings. Except the palaces of the sultans, it is rare to see in Turkey houses other than those of wood, or with wooden frameworks; such is, at any rate, generally the character of the Turkish house. Even when rich or luxurious, it is only a transient decoration; and this feeling seems to be essentially Muhammadan, for we find it in all the countries of Islām, where men build only for themselves, not for their children. At the zenith of their splendour the Ottomans were great constructors of buildings for public use—fountains, caravanserais, bridges, aqueducts, reservoirs, roads, *imārets*, or kitchens for the poor, and hospitals and shelters for the sick or for pilgrims. The sultans, their ministers, and persons of position vied in strenuous rivalry in erecting during their lifetime such buildings as might perpetuate their memory. The study of Ottoman art has been, so far, merely superficial; but it cannot fail to afford great interest from the parallel suggested between the magnificence and wide scope of the conceptions of the Ottoman architects and the splendour and energy which characterize the history of the Ottoman sultans. We might say that the characteristic of Persia is elegance, that of Syria and Egypt wealth, that of Moorish art abundance, and even redundance, and that of Turkey force—characteristics which are found both in the history and in the art of these nations.

This study of the Turkish buildings would be incomplete if unaccompanied by a chronology, which is accordingly appended (including the Seljuk buildings from which, without a doubt, Ottoman art is derived).

Hijra.	Christian Era.	
555	1160	Palaces of the Seljuks at Konia.
613	1216	Tash madrasa at Ak-shahir.
614	1217	Shifaiah madrasa at Sivas.
617	1220	Mosque of Ala-ud-din at Konia.
627	1229	Caravanserai of Sultan Khan.

1141	1728	Fountains of Bāb-i-Humayūn, Azab Kapū, Top Hane at Constantinople.
1161	1748	Mosque of Nur-i-Osmaniya at Constantinople.

5. The Indian School.—Islām, as it spread westward, had transformed everything in its passage. We have seen that in converting Persia it had not been able to effect a thorough conversion to the new doctrine, since the Muhammadans of Persia differ so strongly from those of Turkey, Arabia, and the Maghrib, that the former and the latter form, so to speak, two distinct sects, Shī'ites and Sunnites, each of which considers itself the only orthodox party. Similarly the Muhammadan art of Persia differs more fundamentally from the arts of other Muslim countries than the latter differ among themselves. We shall see that in India Islām had difficulty in taking artistic shape, and in creating devices and forms whose Islāmic character might differentiate them from those consecrated to other religions. We shall also see subseqnently that in the far East, in China, Muhammadan art tends to disappear entirely under the effect of the strong originality of the Chinese character. In that country there is an 'influence of the mass,' as chemists would say. In India and in China the Muhammadan is only in a minority; he disappears in the crowd, and despite his stubbornness of principle he submits to circumstances without being able to defend himself against them or to escape them.

The first Muhammadan conquest of India dates from A.D. 712. The first Indo-Muhammadan kingdom was in the 10th cent. A.D., that of Ghazni, which united under one sway the Panjāb, Multān, Gujrāt, and Kaśmīr up to the Ganges. Delhi became the capital of the Afghan House of Ghor after the destruction of Ghazni (A.D. 1152). It was sacked in 1398 by Timur. Bābar (1494–1530), his great-grandson, founded a stable empire on the ruins of the ancient Muhammadan kingdoms of India. It was then that, under the dynasty of the Great Mughals, was set up one of the most remarkable régimes and civilizations of Muhammadan history. Up to the time of the Great Mughals the reaction of the native element against Islām had been so powerful that the art devoted to Muhammadan buildings had, in spite of all, preserved a marked local character. Bābar and his successors, by admirable general organization, unity of policy, and remarkable administrative ability, bestowed on their Empire a transient homogeneity, which forms its most striking characteristic, and which is reflected even in the buildings that they have left.

Accordingly, previous to the time of the Great Mughals, the Muhammadan buildings of India exhibit, in proportion as we approach the early times of the Hijra, features of increasing importance, borrowed from local traditions and from native art. From these the Muhammadans eliminated all representations of men and animals. Among them we find traditions of the Jain style of construction, the piling up of materials, corbellings, methods borrowed from timber-work, ceilings with simple or superimposed panels.

With the Great Mughals, on the contrary, we see the distinct impress of Persian influence which, commencing under Bābar, continued under Akbar, to become dominant under his successors.

Fergusson, the best historian of the Muhammadan architecture of India, proposes the following classification of the Muhammadan styles of that country:

(1) Style of the Ghaznavids.
(2) Pathan style (Northern India, 1193–1554).
(3) Style of Jaunpur (1394–1476).
(4) Style of Gujrāt (1396–1578), derived almost exclusively from the architecture of the Jain buildings.
(5) Style of the buildings of Malwa (from 1401 to the Mughal conquest), allied to that of Delhi.
(6) Style of Bengal (1203–1576).
(7) Style of Kalburga (1347–1525).
(8) Style of Bijapur (1489–1660), which exhibits an almost exclusively Persian character.
(9) Style of Golconda (1512–1572), in which decadence already appears.
(10) Mughal buildings, on which nearly all these different schools are based, especially those which have undergone the influence of Persian art. The chief monuments are at Fathpur, Agra, and Delhi.
(11) Buildings in Sindh, of a Persian character.

(12) Buildings of Oudh (1756–1847).
(13) Buildings of Mysore (1760–1799).

In all these different countries, as elsewhere, the Muhammadans have left mosques, *madrasas*, and tombs. It is naturally in these buildings that we ought to look for Muhammadan characteristics, and yet in the early Indian mosques like that of Ajmīr (A.D. 1200) and the Mosque of Kutab at Delhi, though the façade overlooking the large court is furnished with pointed window-bays, more or less recalling Western Muhammadan art, the interior of the building possesses an exclusively Hindu character. As Fergusson says with so much accuracy, it is a screen in the pointed style before a Jain temple. Historians agree in saying that these two mosques and many others were built of fragments which were taken from pagan temples. Cunningham discovered in the mosque of Kutab at Delhi an inscription stating that twenty-seven pagan temples were despoiled in order to provide materials for them. Thus, to quote Fergusson again (on the plan of the mosque of Ajmīr, *Indian and Eastern Architecture*, 1899, p. 129),' If we refer to the plan of Vimala-Sah at Mount Ābū, and remove in our thought the principal cell and its porch in the centre of the court and the constructions in front of it from the side of the entrance, keeping only the portico which surrounds the court and that at the back with the cupolas, we have the type of the plan of the mosque, provided the back-wall be turned towards Mecca.' Later on the mosque becomes gradually free from Hindu forms, and under the Mughals all its features are Persian, a little softened, however, by the tendency of the Hindu genius to curve the lines. The public buildings, caravanserais, and bungalows, dams, bridges, and reservoirs also reveal the magnificence of the Muhammadan rulers of India. Historians have depicted for us the splendour of their State ceremonials, with a lavish expenditure of details which makes an indelible impression.

We have already spoken of the early mosques of India, that of Ajmīr and that of Delhi. We speak of the buildings of Ghazni only by way of making the record complete, for they have an almost exclusively Persian character. By the side of the mosque of Kutab at Delhi rises the tomb of the Sultan Altamsh (1235), the pointed arches of which are still dressed with horizontal joinings, while the overhanging stones at the corners are roofed with courses of corbelling. Consequently the local tradition still persists behind this pointed decoration. The doorway of Ala-ud-din at the same mosque already contains a much greater number of Western elements, and the arches are dressed with *voussoirs*. But the small columns of the principal porch and a thousand details exhibit the tenacious life of the local traditions.

After the reign of Ala-ud-din the style of building becomes more severe (tomb of Tughlaq at Delhi, and the tomb of Shīr-Shah at Sasseram in Shahabad). At Jaunpur the mosques are great vaulted halls, but the porticoes preserve a Jain appearance. The mosques of Gujrāt, while retaining the features of the local style, display a remarkable spaciousness of conception. In Bengal, brick architecture assumes a majestic type, which is extremely striking, as in the mosque of Khedim-ar-Rassul at Gur. The Adina mosque at Malda has an almost Western plan; it is the same at Kalburga, where vaulted construction almost entirely replaces that by corbellings. At Bijapur the Persian style dominates, but possibly the first sultan of Bijapur, who was a son of Sultan Murad II., contributed to this artistic revolution by summoning experienced architects from Turkey and Persia; such is the opinion of Fergusson—s correct one in the present writer's judgment. The masterpiece of the architects of Bijapur is the tomb of Mahmud, with its enormous cupola of 40 metres in interior diameter, and 55 metres in height under the crown.

The buildings of Sindh are also in the Persian style, but of brick, with bulbous domes. In the 16th cent. appear the buildings of the Great Mughals, and it is in them that we may say that Persia played in relation to the Muhammadan art of India, the same part which the Italy of the quattrocento and of the Renaissance played in relation to France and Spain. The buildings under the reign of Bābar (d. 1530) are few, but in a chaste and graceful style. Under Akbar architectural style assumes a remarkable force and magnificence, keeping all the while its great originality. Here Persian grace and elegance, destined to preponderate under Akbar's successors in the buildings of Agra and Delhi, mingle with the strength of the Pathan and Jain styles. This is noticeable in the wonderful buildings of the Fathpur-Sikrī palace, tomb, and mosque. This last, which possesses a triumphal gate in the grand style and of an almost exclusively Persian aspect, is situated in the background of a rectangular court, surrounded with porticoes. This mosque is of triple formation. In the centre is a praying-place under a cupola like that of the Juma mosque at Iṣfahān; on each side is a porticoed mosque, possessing a kind of closed *maqṣūra* as a *miḥrāb*. Do not these three sanctuaries placed side by side suggest a trinitarian idea, that of the old Hindu Trinity? The great mosque of Agra, also built by Akbar, already shows an increased tendency towards the Persian style; similarly the tomb of Akbar at Sikandra, with its Persian porches. If the tomb of Itmād-ud-daula at Agra, possibly a little Jainesque in appearance, has purely Persian details (arches, windows, ornaments), the Tāj Mahal, erected by Shāh-Jahān at Agra in memory of his wife, the Empress Mumtāz-i-Mahal, is itself purely Persian as a whole and in details (built between 1630 and 1647). Twenty thousand artizans worked on it for seventeen years. But what interests us more than the particulars of its cost in time and money, is to see in what a masterly fashion the architect of this imposing building has been able, while preserving Persian devices and details invented, arranged, and reduced to rules for the use of brick and enamelled earthenware, and while transferring these forms to marble architecture, to deduce from them effects so novel and so striking that the Tāj Mahal rightly passes for one of the most wonderful buildings in the world. On a large platform measuring 95 metres each way rises the Tāj, the pointed and slightly bulbous dome of which is about 210 ft. in exterior height. This cupola crowns the hall containing the tomb, supported by four accessory halls and four great pointed porches on the four sides. The whole building is of marble, inlaid with the rarest kinds of hard stones, black or coloured marbles, with parts gilded. In the interior the hall of the tomb, which holds only an imitation of the sarcophagus, is decorated even more luxuriantly than the exterior of the building.

The Tāj forms the centre of a plan in which gardens, terraces rising one above another, porches, pavilions, basin-shaped reservoirs, and marble aqueducts combine into a whole of wonderful beauty and harmony.

The decorations of the palace of the early Mughals were in a style befitting their power and splendour, and the remains of their palace at Delhi still exhibit portions admirable from an architectural point of view. Unfortunately, this wonderful efflorescence of art was only temporary;

the mausoleums of Golconda already seem heavy, badly put together, incoherent. After the power of the Mughals was shattered in consequence of the death of Aurangzīb, several kingdoms rose on its ruins, and this confusion was immediately reflected in the most thorough disorder of architectural tendencies. Decadence had set in beyond hope of cure.

It is not necessary to mention any Chinese mosques here. Nothing in their decorations presents any feature whatever which differs in character from the purely Chinese style. We shall conclude this account with a short chronological list of the buildings of India.

Hijra.	Christian Era.	
	10th cent.,	Buildings of Ghazni.
	11th cent.,	Mosque of Kutab at Delhi.
606	1209	Mausoleum of Alamuk at Delhi.
723	1323	Mausoleum of Tughlaq at Delhi.
748	1347	Mosque of Kalburga.
760	1358	Mosque of Khedim ar-Rassul at Gur.
829	1426	Great mosque of Ahmedabad.
929	1522	Tomb of Shīr-Shah at Shahabad.
952	1545	Bābar summons pupils of the celebrated Turkish architect Sinan to India.
962	1554	Tomb of Humayun at Delhi.
964	1556	Akbar makes Agra one of the most beautiful cities of India.
968	1560	Akbar founds Fatḥpur-Sīkrī and its mosque.
1036	1626	Tomb of Mahmud at Bijapur.
1040	1630	As the result of a conference, the architect Isa Muhammad is commissioned to build the Tāj Mabal at Agra.
1138	1725	Buildings of Jaipur.

H. SALADIN.

ARCHITECTURE (Muhammadan in Syria and Egypt).—**1. Mosques.**—The mosque dates from the beginnings of Islām. The simplicity of Muslim worship demanded a simple plan, which was settled as early as the first centuries of the Hijra. It consisted of a large square court (*ṣaḥn*), surrounded with porticoes (*riwāq*), which were covered with a flat roof (*saqf*) supported by arches (*ṭāq*), with stone (*ḥajar*) columns (*'āmūd*) or brick (*libn*) pillars (*rukn*). The elements of this plan seem to be borrowed, on the one hand, from the Persian palaces of the Achæmenian type, perhaps, but indirectly, from the Egyptian palaces, and, on the other hand, from the Christian churches of Egypt and Syria.

Like the church, the mosque is oriented, but in the direction of Mecca (*qibla*), towards which, in accordance with a rule in the Qur'ān (*Sur.* ii. 139), Muslims turn for prayer. The real orientation therefore depends on the latitude. In Syria it is to the S., in Cairo to the E. or rather E.S.E. In order to accommodate the crowd of worshippers, the portico on the *qibla* side is extended, and admits of a larger number of aisles than the other three. It is called *al-īwān al-qiblī*, 'the oriented hall,' in popular language *līwān qiblī* or simply *līwān*. This prayer-hall is often divided into two parts by a railing of carved wood, the *maqṣūra*. On the side facing the court it contains the platform (*dikka*) for the clerics (*muballigh*) who repeat the words of the *imām*. At the back of the prayer-hall opens the niche (*miḥrāb*), indicating the direction of Mecca (*qibla*), with the pulpit (*minbar*) at the side, from which the high priest (*imām*) and the preacher (*ḫaṭīb*) preside at prayer and divine service.

This arrangement presents clear analogies to that of primitive churches. The court surrounded by porticoes, the centre of which is occupied by the basin for ablutions (*mīḍā'*), recalls the *atrium*, which was also surrounded by porticoes, and adorned with a centre-basin for ablutions. The prayer-hall corresponds to the body of the church, the railing is a sort of rood-screen, and the *miḥrāb* a miniature apse. Lastly, the minaret (*manāra, ma'dhana*), perhaps derived from the steeple, and provided with galleries for the call to prayer (*'adhān*), became the visible outward sign of the mosque. Like the primitive steeple, it has no fixed position, and is built sometimes in a corner and sometimes against a face of the building. These analogies are easily explained. The conquering Muslims, finding a more advanced art among the conquered peoples, took possession of it, and began by transforming a large number of churches into mosques. We may mention two famous buildings of this kind: the great Mosque at Damascus and the al-Aqṣā Mosque at Jerusalem, which at the first glance betray their Christian origin.

The style and methods of construction were modified during the course of time, particularly as to choice of materials, gateways, façades, and minarets, profile outline of the interior arches and decoration; but the general plan of the mosque remained the same until the Ottoman conquest.

The classical and primitive name of the mosque was *masjid*, 'place of prayer.' The Qur'ān does not contain any other expression, and the ancient writers designate by that name every mosque, large or small. But towards the 4th cent. of the Hijra, on account of the progress of culture and of architecture, the mosque divided in a fashion into two. The *great Mosque*, in which the congregation of worshippers (*jamā'a*) attended the Friday service (*jum'a*), took the name of *masjid al-jamā'a*, or *m. lil-jum'a*, or *m. jāmi'*. Very soon it was called simply *al-jāmi'*, 'the great Mosque.' Since that time the word *masjid* has been reserved for mosques of the second rank, the number of which is constantly diminishing. No great Mosques continue to be called *masjid* except those of Mecca, Medīna, and Jerusalem (al-Aqṣā). Tradition, following the Qur'ān, calls them by this name, and it has thus remained popular.

This evolution of terms traceable in literature is reflected in the inscriptions, which furnish definite, official, and dated evidence. The great Mosque of Aḥmad ibn Ṭūlūn, built in Cairo in 265 (879), still bears the name of *masjid* in its dedicatory inscription. But two centuries later the Mosque of the Nilometre, built in Cairo in 485 (1092), is called *jāmi'* in its three foundation inscriptions.

2. Madrasas.—When diffusing the Shī'ite heresy in Egypt and Syria, the Fāṭimid khalīfs did not modify the general mosque-plan; we meet with it again especially in those which they built in Cairo. But soon after their time the movement of religious ideas and the political situation created by the Mongol invasions and by the dismemberment of the khalīfate of Baghdad called forth in the Muslim East an orthodox or *Sunnite* reaction, directed specially against 'Alid or Shī'ite sects and dynasties. This religious (Ash'arite) and political (Sunnite) reaction caused a series of reforms in all domains

of civilization. One of the most important was the extension of the *madrasa*. Originating in Khorasan about the beginning of the 4th cent. A.H., the madrasa was at first simply a private school of religious sciences, *i.e.* of tradition, exegesis, and law, according to the Sunnite rites. But in the 5th cent. A.H. the Seljuk sultans of Baghdad, having become powerful vassals of the Abbāsid khalīfate, and the official protectors of Sunnism and Ash'arism, transformed the madrasa into a State institution, intended to produce a select body of officials for all branches of administration. From that time the madrasa became a powerful centre of religious and political propaganda, the school of official Sunnism, and almost a government institution. It was in this form that it was introduced into Syria in the 6th cent. A.H. by the Sunnite Atābeks, particularly Nūr-ad-dīn; then into Egypt by Saladin.

If the madrasa differs from the mosque in its character and purpose, its origin and history, it is also distinguished from it by its plan. When Saladin introduced it into Egypt, this plan was already settled: a small square court with open top (*ṣaḥn* or *qā'a*), enclosed by four high walls, with four halls (*līwāns*) in the form of a Greek cross, opening on to the court by a high arch (*'aqd*), and, in the outer corners of the building, offices for the attendants and the work of the establishment. This symmetrical plan with four branches was admirably suited for the *quadruple madrasa*, i.e. the school devoted to the four chief Sunnite sects (*Ḥanafite*, *Shāfi'ite*, *Mālikite*, and *Ḥanbalite*). Each sect was installed in one of the four *līwāns*, as is testified by the inscriptions in the large madrasa of the Sultan Ḥasan, built in Cairo in 764 (1363). This plan seems to have originated in Syria. It is found in a curious Syrian monument, of a far earlier date than the Syro-Egyptian madrasas, the *Qaṣr* of 'Ammān. Like the plan of the mosque, it combines elements of various origin: the *līwāns* are arched in the Persian style (Sasanian palaces), but their arrangement in a cross around a central court recalls the symmetrical plan with two axes of certain Byzantine and Syrian churches, which the Qaṣr resembles in many other architectural details.

Like the mosque, the madrasa became in time modified in its style and methods of construction. Thus, until the end of the 14th cent. A.D., its *līwāns* were covered with barrel-vaults (*qabu* or *'aqd*) of brick (*libn*), following the Persian and Byzantine methods (without centrings). The last large vaulted madrasa is that of the Sultan Barqūq, built in 788 (1386). Then the vaults were replaced by a flat wooden (*ḫashab*) roof (*saqf*) and ceilings whose rich polychrome decoration merely disguises a serious decadence in the art of building. The only vault that remained was that of the front arch of the four *līwāns* opening on the court, built with arch-stones. But, in spite of these modifications, the plan and general arrangement of the madrasa subsisted until the Ottoman conquest.

The Sunnite reaction gave rise to some institutions analogous to the madrasa, particularly the *dār al-ḥadīth*, the 'school of tradition' (Sunnite). But these establishments, not having the same political standing, remained in the background and created no type of architecture; or rather, being simply varieties of the madrasa, they adopted its general plan.

Under the Ayyūbids, who may have feared a troublesome return of the Shī'ite doctrines, the madrasa retained its character as a State institution with political tendencies. Its first result was to destroy the Fāṭimid school, the *dār al-'ilm*, a kind of academy with eclectic tendencies, where, along with Shī'ite doctrines, were taught the sciences inherited from Persia and ancient Greece. But Sunnism did not encounter the Shī'ite sects only. The Crusades had stirred up another opponent, the Latin kingdom of Jerusalem. Saladin and his successors, impeded by feudal administration and political decentralization, had weakened but not destroyed these foes, who finally fell before Baibars. On the ruins of Ayyūbid feudalism he founded the kingdom of the Mamlūks, a centralized State, defended by a regular army, and governed, from high to low, by a hierarchy of officials. With this powerful lever he overturned at once the Latin kingdom and the fortresses of the Assassins, the last bulwark of Shī'ite heresy in Syria. He afterwards established his prestige in the eyes of the Muslim masses by welcoming to Cairo the wreck of the khalīfate of Baghdad, which had been overturned by Hūlāgū (1258). In re-establishing, for his own benefit, the duality of the spiritual and temporal powers, he re-tied the thread broken by the Mongol invasion, and completed the work begun by the great Sunnites of the preceding century.

Then the struggle ended, and the militant spirit of Sunnism, inspired by the Holy War (*jihād*), became softened and turned towards pious works and contemplative study. The madrasa, having carried out its fighting rôle, had to lose for ever its original character and assume that of the mosque. All the large madrasas were then fitted up for the Friday service. The *līwān qiblī*, which was larger than the other three, served as prayer-hall and sheltered the pulpit and the *miḥrāb*. Last of all the minaret came to give to the madrasa the complete appearance of a mosque. But it had acquired such prestige that, instead of merging in the mosque, it threatened rather to supplant it. While the number of the great Mosques of classical plan continued to diminish, that of the madrasas of cruciform plan increased until the Ottoman conquest.

This evolution is reflected in linguistic usage also. The madrasas set apart for religious worship took the name of *madrasa lil-jum'a*; then they were called simply *jāmi'* like the great Mosques. Maqrīzī, who drew up his *Topography of Cairo* in the first quarter of the 15th cent. A.D., gives this name to the majority of the large madrasas of the Mamlūks. Finally, epigraphy officially established this use from the year 830 (1427). From that time the word *madrasa* fell into the background as the old word *masjid* had done. At the present day in Egypt it is applied exclusively to a civil and lay school; every great religious building is a *jāmi'*.

Thus the original mosque, the masjid, became subdivided into great Mosque (*jāmi'*) and small mosque (*masjid*). The madrasa, in its turn, subdivided into jāmi' and lay school. These two classes of jāmi' became blended in their purpose but not in their plans. They remained distinct until the Ottoman conquest, which caused the madrasa-plan to disappear. In Egypt and Syria the Ottomans continued to build jāmi's on the plan of the great Mosques, but modified under the influence of the Turkish school, whose mosques are built on the St. Sophia plan (the dome type).

3. Monasteries.—The Sunnite reaction, which brought the madrasa from Persia to Egypt, mingled during its course with tributaries of ancient origin, quite foreign to primitive Islām. One of the most important was *Ṣūfīism*, i.e. Eastern monasticism with mystic tendencies of Persian origin. The public building of Ṣūfīism is the Ṣūfī monastery, the *ḫānaqāh*, a Persian word which penetrated with the building first into Syria and then into Egypt, through Saladin, the founder of the first Egyptian ḫānaqāh. About that time it became

confused with the *ribāṭ*, an Arabic word denoting an ancient military settlement, which had also become, by a profound change of the original idea, a Ṣūfī monastery.

The ribāṭ and the ḫānaqāh flourished under the Ayyūbids, and then under the Mamlūks, but without creating any real type of architecture. These monasteries sometimes assume the plan of the great Mosque (monastery of the Emir Shaiḫū in Cairo, 756 [1355]), and sometimes that of the madrasa (monastery of the Sultan Baibars II. in Cairo, 709 [1310]). Like these two types, they possessed all the visible appliances for worship: minaret, prayer-hall, pulpit, and *miḥrāb*. But their dependencies, fitted up for cenobitic life, and arranged in long lines of cells, give a peculiar appearance to their plan. Several curious traces of them still survive, especially in Cairo, where the monastery of the Sultan Ināl (858 [1454]) affords the most complete specimen.

At the Ottoman conquest the ribāṭ and the ḫānaqāh gave way to the *takiyya*, the monastery of Turkish dervishes, the plan of which also came under the influence of the Constantinople school (porticoes with domes). We may mention, lastly, the *zāwiya*, a word which means, in the Muslim West, a cell, a hermitage, and then a real monastery, but which in Egypt is applied only to a very small mosque, an oratory, or a chapel.

4. Fountains and Schools. — Connected with these three great types—the mosque, the madrasa, and the monastery—are two secondary types, the *sabīl* and the *kuttāb*. *Sabīl* means 'road'; *fī sabīl allāh*, 'in the way of Allāh,' 'for the sake of God,' is said of every pious work, of the Holy War as well as of almsgiving, and especially of foundations for the free use of the public. Now, in the East water is a treasure; according to a saying attributed to Muhammad, to give a drink of water is one of the most meritorious charities. Every free foundation is a sabīl, but the sabīl *par excellence* is the *public fountain*.

In Syro-Egyptian architecture, the sabīl is rarely isolated. It is placed at the corner of a mosque, a madrasa, or a monastery, on the ground-floor, and can be recognized by its two large square windows at right angles, closed with beautiful bronze railings and decorated with charming carvings. Above the sabīl is situated the *primary school* (*kuttāb* or *maktab*), which is rendered conspicuous at a distance by its elegant loggia, open on both sides, in rows of arches on small pillars. This graceful *motif* of the *sabīl-kuttāb* subsisted until the Ottoman invasion. At that time the sabīl became separated, first along with the kuttāb, and then quite alone. Its style has degenerated down to our time, when the fountain displays all the false taste of the modern Turkish school.

5. Mausoleums.—For the obscure dead a grave is sufficient. The illustrious dead, not content with a tomb, require a mausoleum. As far back as it is possible to go, the Syro-Egyptian mausoleum possessed its own peculiar architectural form: a cubical hall, square in plan, covered with a dome. Is this type a distant recollection of the ancient Egyptian *mastaba*? It seems to be more directly connected with a Christian type, the *kalybe* (καλύβη), some traces of which still survive in Syria. The problem of building the dome on a square plan, outlined in these old Syrian kalybes, receives in Muslim architecture the most varied solutions, which reflect the successive efforts and inventions of the Persians, Romans, and Byzantines. The transition between the square and the circle is built of bricks dressed or arranged in corbels, of beams covered with stucco, of hanging arches in semi-cupolas, or of beautiful stone pendants like stalactites. The materials, proportions, outline of the square, of the drum, and of the dome, the decoration—all, in a word, that constitutes the style—changed from age to age, but the general plan remained the same until the Ottoman conquest.

The classical name of the mausoleum is *turba*. But as the dome was its most conspicuous feature, the name of the latter (*qubba*) was extended to the whole building. In literature and the Syro-Egyptian inscriptions these two words are indifferently applied to the mausoleum as a whole, *i.e.* the architectural envelope of the tomb, which itself is called *qabr* or *madfan* or *marqad* or *ḍarīḥ*, the last an Arabic word of Aramaic origin.

The mausoleum is often built by itself, isolated in a cemetery. Sometimes there are several together in a single enclosure (*ḥōsh*), but not forming an organic whole. Frequently the mausoleum of a great person is placed in the corner of a religious building which he has founded. Like the great Italian *condottieri* of the Renaissance, the Sultans and Emirs, former slaves who had risen to fortune, and who were always uncertain of the future, took care to provide for their own tombs beforehand.

This association creates three chief combined types: the *mosque-mausoleum*, the *madrasa-mausoleum*, and the *monastery-mausoleum*. We may mention in Cairo: the mosque of the Sultan Shaiḫ (823 [1420]), the madrasa of the Sultan Qāyt-Bāy (879 [1474]), and the monastery of the Sultan Faraj (813 [1411]), popularly called the tomb of Barqūq.

We find also more complicated types, *e.g.* the *monastery-madrasa-mausoleum*. We may cite those of the Sultans Barqūq (788 [1386]) and Ināl (858 [1454]). All these combined types contain the sahīl-kuttāh *motif*, and unite one or several minarets to one or several domes. They do not have special names. The inscriptions of these huge buildings, agreeing with the literary texts, refer to them sometimes under one name and sometimes under another, according to the part of the whole that they wish to emphasize.

Like all the types of Syro-Egyptian architecture, the turba disappeared after the Ottoman conquest. The name continued in use, but it refers to tombs of any kind. Since the 16th cent. A.D., Egypt and Syria have not had any mausoleums worthy of their past.

6. Holy places and pilgrimages.—In spite of the express intention of its founder, Islām at an early date adopted the worship of saints, and the belief in miracles accomplished by their intervention. This cult was too deeply rooted in the Oriental religions for Muhammad to make it disappear. In Syria, especially, the old pagan cults connected with local gods, which had resisted Christianity, lay hidden under Islām, which had to tolerate while apparently assimilating them. The tenacity of these local traditions explains the manifold origin of Muslim saints. Some of them are pagan gods, transformed by an association of ideas, beliefs, or mere words into Muslim saints; others are the great personages in the Qur'ān, Muhammad, Jesus, and the Jewish prophets; others again are heroes of history, conquerors, or famous sovereigns; and others, ascetics, monks, or scholars, celebrated during their life and canonized by the common people with their irresistible inclination towards the supernatural. All these saints have their sanctuaries (*mashhad*). The belief in miracles wrought by their intervention makes these sanctuaries places of pilgrimage (*mazār*).

The mashhad has not created any special type of architecture. As it is almost invariably erected at the grave of the saint, it takes the plan of the

mausoleum. From the architectonic point of view it is simply a variety of the turba, perhaps the oldest. It is found in all sizes, from the small chapel with a little dome, whitened with lime (*marabut, shaikh, walī, nabī, maqām*), to the large classical mausoleum; all have the dome on the square plan. The only one of these buildings that departs from the traditional plan is the famous Dome of the Rock, the Qubbat as-Sahra in Jerusalem, built by the Khalīf 'Abd al-Malik, in 72 (691), and many times restored since then. Its huge dome, on a circular plan, surrounded by a double octagonal enclosure, harbours, along with the famous rock, a whole cycle of Jewish and Christian legends. This circular-octagonal plan, which undoubtedly proceeded from that of the Christian building prior to the Qubba, is found again in a group of pre-Muslim Syrian churches (Bosra, Ezra, Qal'at Sim'ān, etc.). But apart from the Dome of the Rock and a few secondary buildings derived from it (Dome of the Chain in Jerusalem, mausoleum of the Sultan Qalāwūn in Cairo, etc.), it has not been adopted in Syro-Egyptian architecture.

Apart from the turba and the mashhad, the dome is used in only one instance in Syro-Egyptian architecture: a small dome, also called *qubba*, is erected in large mosques, at the back of the prayer-hall, in front of the *miḥrāb*. This ancient feature may probably again be a relic of the church, namely, the dome which certain basilicas erect at the crossing of the transept in front of the choir. This was the only place used for the dome in the great Mosques until the Ottoman conquest, which systematically introduced domes over the porticoes and the prayer-halls of the great Mosques, after the style of the Constantinople school.

MAX VAN BERCHEM.

ARCHITECTURE (Persian).—The account of the development of the architecture of Persia is almost synonymous with the land's own history. From the crude beginnings in early Median or pre-Median times, before the 7th cent. B.C., we may trace the evolution of the builder's art down to the Achæmenian period (B.C. 550–330), thence through the Seljuk and Parthian eras (B.C. 330–A.D. 224) and the following centuries of the Sasanian empire (A.D. 224–661). At the close of that period, in the 7th cent. A.D., Iran was completely changed by the Arab conquest and subsequent Muslim sway, from which epoch to the present time the history of Persian architecture forms a special branch of the study of the development of Muhammadan art.

1. Early Iranian and Median period (before B.C. 550).—Our knowledge of the architectural conditions during the early Iranian and Median periods is limited in extent, both because of the absence of historic remains surviving from that remote date, and because of the lack of definite descriptions in ancient texts that might serve to elucidate the subject. Nevertheless, from incidental allusions in the Avesta, from references in the Greek historians, and from chance statements in later writings from which deductions may be drawn, we are able to form some sort of a picture of the architectural status in ancient Media, or Western Iran, and in early Bactria, or Eastern Iran. Herodotus (i. 96–99) affirms that, down to the time of Deioces, the founder of the Median empire, the Medes used to live in villages, and that they were first gathered into cities by Deioces when he made Ecbatana his capital, and fortified it as his royal residence. From the conditions portrayed in the Avesta, so far as that work may be regarded as reflecting the age in question, and from the sight to-day of village after village of flat-roofed mud huts spread over much of the territory which once was ancient Media, we may infer that the primitive condition of architecture in that region of Iran was really represented by Herodotus' statement, and that the same was true of ancient Bactria. But this judgment must not be pressed too far; for, while the Avesta refers to habitations of so crude a sort that they might be removed or destroyed if a man died in them (*Vendīdād*, viii. 1–13), it also alludes to houses that were 'strong, well-built, lofty, handsome, shining and conspicuous, constructed with a special chamber, balcony, verandah, and enclosing wall, or erected with high columns, or with a thousand columns,' as we know from a number of passages from which the adjectives here given are drawn (cf. *Vend.* ii. 26; *Yasna*, lvii. 21; *Yasht*, v. 101). The columnar architecture referred to in the last two attributes anticipates by many years the pillared halls of the Persian kings at Persepolis.

The chief old Iranian terms for 'house,' apart from the Avesta *vaēsma*, 'abode' (*Yasht*, x. 86), and the old Persian *hadiš*, 'palace' (cf. the curious, though probably merely accidental, use of the linguistically cognate ἕδρανον to denote the palace of the Persian kings in Æschylus, *Persæ*, 4), are *nmāna* (Gāthic *demānā*) and *kata*, the latter, however, being the 'room' rather than the 'house' (the view that *kata* denotes 'underground house,' expressed, *e.g.*, by Geiger, is scarcely correct).

The houses, doubtless simple in construction, were built of wood (cf. *dāuru-upadarana*, *Vend.* viii. 1) or were sometimes mere felt-covered tents (cf. *nematō-aiwivarana*,' *ib.*), although the use of bricks and mortar, being mentioned in connexion with non-architectural construction (cf. *Vend.* vi. 51, viii. 8, 10), was doubtless common also in building houses. Besides the 'columns' (or 'pillars'), 'verandahs,' etc., already mentioned, the Iranian houses had both doors and windows (*Vend.* vii. 15, iii. 29, etc.), though how they were closed, we know no more than how the entire house was roofed. It may readily be supposed, nevertheless, that the roofs were of reeds or turf laid on beams, or even of simple sun-dried bricks, such as are still utilized in Iranian regions (cf. Geiger, *Ostiran. Kultur*, p. 219).

Turning from the Avesta to the description given by Herodotus (i. 98) of the fortified abode of Deioces at Ecbatana, we find a citadel that must have resembled an Assyrian or Babylonian *ziḳḳurat*. Its massive walls rose tier above tier in seven circles, and were crowned by battlements of various colours, white, black, red, blue, and orange (probably coloured gypsum and glazed tiles), while the ramparts of the topmost fortifications, where the palace stood, were decorated respectively with silver and gold. This description is probably not overdrawn if we may judge from the account which Polybius (x. 27) gives of the magnificence and gorgeous decorations of the temple of Aena or Anaias at Ecbatana (the goddess Anāhita in the Avesta) in the 2nd cent. B.C.; and the fact that we have no remains of such splendour is due not alone to the vandalism of Alexander, Antigonus, Seleucus Nicator, and Antiochus the Great, as described by Polybius, but also to the circumstance that the Medes probably constructed their buildings largely of wood, sun-dried bricks, and clay, even though they were lavish in adornment.

As to the architectural style of their palaces, it is probable that the Medes, like the Persians after them, were largely influenced by Assyrian, Babylonian, and Chaldæan models. Regarding their religious architecture, we know practically nothing beyond the description by Polybius, just referred to; it is a fact, moreover, that Zoroastrianism does not appear to have been favourable to temple-building, for the Persians had no temples in the Greek sense, as Herodotus (i. 130) expressly states; yet it is equally certain that they must have had some sort of a sanctuary to protect the holiest of their sacred fires, and such shrines are presumed

by the Pahlavi writers of a later date to have existed in those early times (cf. *Pahlavi Bahman Yasht*, iii. 30, 37, 40; *Zāṭ-sparam*, vi. 22, xi. 8–10; *Būndahishn*, xii. 18, 34, xvii. 7, etc.), so that it is possible that the temple at Ecbatana, as described by Polyhius, may have preserved some architectural features from ancient days. In the mortuary customs enjoined by their religion, moreover, the early Iranians, whether Medians or Bactrians, made use of temporary structures, called *dakhmas* (wh. see) in the Avesta (*Vend.* iii. 9, 13, vii. 54, vi. 44–51, etc.), on which to expose the dead, just as their modern representatives, the Parsis (wh. see) and Gabars (wh. see) still follow the custom in their 'Towers of Silence'; but what the shape of these receptacles may have been in ancient times is only a matter of inference.

2. Achæmenian period (B.C. 550–330).—With the victory of Cyrus of Persia over the Median king Astyages, the supremacy of N. Iran passed to S. Iran, and a new dominion, the sovereignty of the Achæmenians, or the combined rule of the Medes and Persians, came into being. The architectural remains, both religious and civil, which belong to this period are abundant, and they show the art of the builder in early Persia at its zenith. Terraced platforms of massive masonry and palaces of stone graced by halls with tall fluted columns, crowned by bull-headed capitals, were typical of the age.

Ecbatana, Pasargadæ, Persepolis, and Susa were the capitals of the Medo-Persian empire, and the chief seats, therefore, of architectural relics. The site of Ecbatana is now occupied by Hamadan; and there, or in its vicinity, are to be found portions of broken columns, and a few carved stones, remnants of walls that belonged to ruined structures, and may date back even to Median times. But as yet no systematic excavations have been carried on to determine their age, or tell whether extensive finds of a similar character may yet be made. If we leave Ecbatana out of account, the earliest remains of Achæmenian architecture are to be seen at Pasargadæ, the capital of Cyrus the Great, in the plain of the modern Murghab, between Iṣfahān and Shiraz. As we approach it from the north, we first pass the remains of a ruined platform on the crest of a range of low hills overlooking the plain. It was apparently designed to support an audience-hall of Cyrus, but was never completed. Spread over the surface of the plain itself traces of the royal city are to be seen. Nearest to the ridge is a single shattered wall of a massive stone building which must have been 40 ft. high by 10 ft. square, and which may have served as a shrine for the sacred fire, although some authorities (on less good grounds, it seems) believe that it was a princely tomb. A second group of ruins lies not far distant to the south, and comprises a high round column (not fluted), some angle-piers of an edifice that once surrounded a royal court, and a stone shaft consisting of three blocks, on the uppermost of which is inscribed in cuneiform characters, 'I Cyrus, the King, the Achæmenian.' A huge slab stands somewhat to the east of this group, and on its face is carved in low relief a winged representation of the Great King, above whose head was similarly inscribed the device of Cyrus just quoted, although the part of the stone containing it has been sawn off and lost within the last century. Still another collection of ruins lies somewhat to the south-east, and shows vestiges of pillars and stone door-sills grouped around a paved court that belonged to some edifice of Cyrus.

Most important of all the ruins is the tomb of Cyrus, which lies about a mile beyond in a south-westerly direction. It is known to be his mausoleum from descriptions in the classics. The structure resembles a small house, with a slightly pointed roof, and is made of a handsome white sandstone resembling marble. It stands high upon a sub-basement, built of the same material and consisting of a large foundation plinth, nearly 50 ft. long, 40 ft. wide, and 2 ft. high, surmounted by a series of six stone layers that form a pyramidal series of high steps approaching the mausoleum from every side. The mammoth blocks that make up the tomb itself were originally fastened together by iron clamps, but without the use of mortar; and so perfectly were they set that the structure still forms a compact whole, even though falling more and more into ruin. The sepulchre, measured from the outside, is about 20 ft. long, by 17 broad, and 18 high. A very low door in the western side serves as an entrance. The mortuary chamber measures 10½ ft. long, by 7½ ft. wide, and 8 ft. high (the exact measurements in metres may be found in Jackson, *Persia*, p. 288). It is needless to add that the chamber is now empty. In architectural style the tomb of Cyrus is thought to show Lycian influence, since somewhat similar burial edifices have been found in Asia Minor, the land first conquered by Cyrus after Media; but it may also be possible that the idea of such a vault for the dead may have owed something to the Avestan *kata*, 'house,' a temporary structure for the body before it was carried to the *dakhma*. Around the tomb, moreover, there once stood a decorative colonnade, as is clear from the fragments of columns still upright, and a few hundred yards beyond it are the vestiges of a platform on which was once erected a habitation for the Magian priests who were custodians of the tomb, as we know from Arrian (*Anabasis*, vi. 29. 7).

A single other vestige of Achæmenian architecture, religious in its character, is found at some distance to the N.W. in the same plain; it is in the form of the bases of two altars, used by the Magi in celebrating their sacrificial rites, as they did, in the open air.

Illustrations and descriptions of all the architectural monuments in the Murghab Plain are to be found in the works of Texier, Flandin and Coste, Ker Porter, Stolze and Andreas, Dieulafoy, Perrot and Chipiez, Curzon, and Jackson; and they convey a good idea of the architecture of Cyrue's capital.

Far grander than the ruined monuments of Pasargadæ are those of Persepolis, the capital of Darius, and Xerxes, and their successors. These tokens of a vanished empire are spread over a considerable area in the Plain of Murghab, some forty miles to the south of Cyrus's capital. The first vestiges of this important series are the traces of the lost city of Stakhra, indicated by some broken columns, remains of portals, and scattered fragments of building blocks at the site now called Stakhr or Istakhr. The southernmost point of this city is now marked by a small granite staging, some 40 ft. square and 7 ft. high, which the natives call *Takht-i Tā'ūs*, 'Peacock Throne,' or *Takht-i Rustam*, 'Throne of (the hero) Rustam.' A mile or so farther south rises the Platform of Persepolis itself, with its magnificent stairways and palace-crowned terraces, which the Persians call *Takht-i Jamshīd*, 'Throne of Jamshīd,' after the legendary king of that name, or *Chihil Minār*, 'Forty Pillars,' from the columns that remain standing. Although the site as a royal residence may date back to legendary times (cf. possibly *Būndahishn*, xxix. 14), we know from an inscription on the southern wall that it owed its origin as a stronghold to Darius I., apparently about B.C. 516–513, and it is generally believed that Greek designers were employed in its construction (see Justi, 'Gesch. Irans' in Geiger and Kuhn's *Grundriss*, ii. 448–449). Even when considered apart from the edifices that stood upon it, the platform is a remarkable piece of constructive

art. It measures over 1500 ft. from north to south, varying from 20 to 50 ft. in height, according to the elevation of the three main terraces, and it has an expanse running back eastward for nearly 1000 ft. until it merges into a low range of hills, called *Kuh-i Raḥmat*, 'Mountain of Mercy,' the spurs of which have been partly cut away to furnish material for its construction. By the aid of inscriptions, and judging from the position of the different ruins, the columns that remain standing, and the arrangement of the bases of those that have fallen, as well as from the outlines of the walls, portals, stairway approaches, and sculptured pediments, we are able to identify each of the buildings that once occupied this site. Opposite the Grand Staircase of approach at the northern end, is the Porch of Xerxes; 50 yards to the south stand the relics of the Audience Hall of Xerxes; still farther southward, and near a mound, are the better preserved remains of the Palace of Darius; while a short distance southward again, across a ruined courtyard, are some traces of a Palace of Artaxerxes III. Ochus, identified by an inscription on the stylobate. Directly behind this is the Palace of Xerxes himself, with a minor edifice still farther back, while at some distance northward is the great Hall of a Hundred Columns, erected by Darius, with a portico near its south-western corner, showing in stone the king seated on his throne of state. The destruction of these gorgeous buildings is attributed to the drunken act of Alexander the Great, when he burnt the citadel after his victory over the last Darius; but though the hand of the conqueror destroyed the beauty of the edifices and left them a ruin for all time, it could not obliterate those traces that still in after ages bear witness to their ancient glory.

Some further remains of royal architecture are to be seen at Persepolis and in its vicinity; they are the rock-hewn tombs of the Achæmenian kings. Three of these sepulchres are cut in the hills, behind the great platform already described. They are believed to be the mortuary chambers of Artaxerxes II. Mnemon (B.C. 404–358), of Artaxerxes III. Ochus (B.C. 358–337), and of Darius III. Codomannus (B.C. 335–330), if we are justified in regarding the unfinished grave as that of the last of the Achæmenians. More imposing in their situation and older in point of time are the four tombs carved in the rocky front of the necropolis cliff of Naksh-i Rustam, on the other side of the plain, about 6 miles north-west of the platform. These sepulchres, which were the model for the three later ones, are each hewn in the shape of an immense Greek cross, and sunk deep in the face of the rock. They are elaborately carved in architectural style to represent a façade decorated with bull-capped pillars, two on either side of the doorway, and surmounted in each case by an entablature richly sculptured with a bas-relief of the king, his subjects, and Ormazd. An inscription shows that one of these tombs was the sepulchre of Darius the Great; the other vaults, it is believed, belonged to Xerxes, Artaxerxes I., and Darius II. A few yards distant from the tomb last named there is a square stone edifice which closely resembles the rectangular structure at Pasargadæ, already mentioned, but well preserved, and, like the latter, probably a fire-shrine rather than a tomb. Near the base of the necropolis hill, but hidden from the shrine by a spur of the cliff, are the remains of two altars, hewn out of the living rock and serving as fine examples of the stonecutter's work for religious purposes in Achæmenian times. To the same age may likewise belong some rude cuttings in the rocks on the crest of the cliff, apparently designed as repositories for exposing the bodies of the dead in accordance with the ancient Zoroastrian custom, but the date is not certain. To a later age, however, we must assign the seven sculptures cut in the rock beneath the tombs themselves, since their subjects prove them to be of Sasanian origin. The list of Achæmenian tombs is to be supplemented by several other sepulchres, somewhat resembling those of Naksh-i Rustam, but probably dating from an earlier period than they or the Persepolitan tombs, and without inscriptions or ornamentation, excepting one which has a crude bas-relief. These are found near the village of Sahnah, between Hamadan and Kermanshah, at Holvan in Western Persia, and Takhrikah in Azarbaijan, as well as elsewhere (see de Morgan, *Mission scientifique en Perse*, iv. 292–302, and Justi, *op. cit.* ii. 455, 456).

The fourth and last of the great Achæmenian capitals was Susa, whose remains were first made known by Loftus in 1852, and were excavated with very important results by Dieulafoy in 1884, 1885, 1886, followed by de Morgan in 1897, 1898, 1899. The site which they occupy was the winter residence of the Achæmenian kings and the old seat of government of Elam. The ruins extend over several *tells*, or hillocks, between the river Chaur, or Jaur, and the Kerkhah, in the vicinity of the modern Dizful and Shuster. Four principal groups of remains are distinguishable, according to the results of the explorations that have been mentioned: They are, first, the *tell*, called the Citadel; second, the Royal City, where stood the palaces of the successors of Darius; third, the traces of the city itself; and, fourth, the vestiges of the inhabited town along the river's edge. If we may judge from the elaborate finds made by Dieulafoy, the Citadel and the Royal City must have made an imposing spectacle in the days of their pristine glory (see the plates in Dieulafoy, *L'Acropole de Suse*); and the same investigator's researches have revealed, among other ruins, the remains of the *apadāna*, or throne-room, of Artaxerxes II. Mnemon, which was erected on a site earlier occupied by a palace of Darius I. which had been destroyed by fire. It was here that the archæological expedition, led by Dieulafoy and his wife, discovered the frieze of archers and a lion-frieze, together with the remains of an enamelled staircase and various other objects that enrich our knowledge of early Persian architecture and art. In point of style the Susian remains are quite like those of Persepolis, even as regards the character of the so-called 'Persepolitan column,' and, like the latter, they are thought to show traces of Greek influence combined with Assyro-Babylonian elements and other features already mentioned, although they are so thoroughly Persianized as to possess an individuality of their own.

The ruins of one other edifice in Persia may be referred to here as belonging possibly to the latter part of the Achæmenian period; it is the remains of the great temple of Anaitis (see ANĀHITA) at Kangavar, between Hamadan and Kermanshah. A portion of the N.W. wall of the stylobate on which the temple stood is still intact, and is crowned with the remains of a colonnade of pillars, while on the south-eastern side of the temple precinct there is a disordered mass of large granite blocks and columns, whose size conveys an idea of the vanished magnificence of the sanctuary which is now a mass of ruins. Owing to the presence of certain characteristics in the columns, which seem to show later Greek or Syro-Roman affinities, Dieulafoy and some others propose to assign this temple to the Parthian period; but, to the present writer, the evidence seems

stronger in favour of attributing its erection to Artaxerxes Mnemon or some other of the later Achæmenians. For the sake of completeness it should be added that Dieulafoy, on the contrary, assigns to the Achæmenian period some of the ruins at Firuzabad and Sarvistan in S.W. Persia; but other authorities, like Perrot and Chipiez, de Morgan, and Gayet, are better justified in assigning them to the Sasanian epoch.

3. Seljuk and Parthian periods (B.C. 330–A.D. 224).—The interregnum of seventy years occupied by the sway of Alexander's direct successors and the Seljuk rule exercised no appreciable effect on Persian architecture, unless it was to extend the sphere of possibility for Greek influence. The Parthians were Philhellenes, as is shown by their employing the Greek language and Greek devices on their coins; but they were not great architects, as is clear from the Parthian ruins—practically the only ones surviving—at Hatra and at Warka, although these are built with crude solidity, if not with beauty of design. The structure at Hatra, the modern *al-Ḥadhr*, in Mesopotamia, was either a palace or a temple, or possibly both combined in a single precinct, for which reason it is commonly spoken of as a palace-temple. The ruins show a brownish-grey limestone edifice, 366 ft. long, 210 ft. broad, and with thick walls proportionately high. The building consists of a series of seven large chambers arranged side by side, with several smaller rooms leading into them, and a large square hall—apparently a throne-room—added in the rear near the left-hand corner of the edifice. The front of the building was, for the most part, open, so that the light was good, and it was probably shaded by awnings. The walls of the greater apartments were strengthened by pilasters, and decorated by bas-relief sculptures and ornamental friezes, which added to the effect of the general architectural design. As to its date, the palace-temple at Hatra may be assigned with reasonable probability to the latter half of the Parthian period, or between the 1st and 3rd cent. of the Christian era, since the city was in a flourishing condition, and able to resist the siege of Trajan in A.D. 116, and of Severus in A.D. 198, but was a deserted ruin in the 4th century.

The second of the Parthian architectural remains is found at *Warka*, the ancient Erech, on the Euphrates, a city mentioned in Gn 10^{10}. This ruin consists of a sepulchral chamber built over a tomb in which was found a coffin of the Parthian period. The description which Loftus gives of this structure, with its bases of columns, capitals, cornices, friezes, and bits of painted plaster, shows that the Parthians in later times were not averse to decoration and artistic touches in their buildings, even if they had affected a rude simplicity in earlier times. This fact is further borne out by the account of the palace at Ctesiphon, as given in Philostratus' *Life of Apollonius* (ed. Olearius, i. 25). According to de Morgan (*Mission scientifique en Perse*, ii. 137 and plate lix.), there is a ruin of a Parthian palace or temple at Velazjord, near Kangavar, and mention has already been made of the view which would associate the ruined temple at Kangavar with the Parthian era. The scarcity of Parthian remains is probably to be accounted for, as in other cases, by the fact that brick was more largely used than stone in the construction of their buildings. As to originality in architectural art, it may be added that the Parthians are credited with the development of the arch- and tunnel-shaped roof, in contrast to the flat ceiling and square lintel of the Achæmenian period.

4. Sasanian period (A.D. 224–661).—The Sasanian monarchs, unlike their Parthian forerunners, were great builders, and distant architectural rivals of the Achæmenians. An enumeration of the places where monuments that date from their reign are found would take in a large part of Persia, as is clear from such a list as that given by Justi (*op. cit.* ii. 540–541). These remains show advances in constructive art over the Parthian period, more especially in the development of the dome, an outgrowth of the arched vault, and in the elaboration of the façade of such a palace as that at Ctesiphon, whose high recessed entrance, with galleried panels on either side, anticipates the sweeping curve of the grand portal and the panelled front which is typical of the mosque and madrasa architecture in Muhammadan times. The standard of royal magnificence under the Sasanians is shown in the ruins of Qaṣr-i Shīrīn, the castle built by Khusru II. Parvīz (A.D. 600), for his favourite, on the road between Baghdad and Kermanshah, and is evident in the sculptured grotto at Ṭāq-i Būstān, near the latter city. To about the same epoch belong the ruins at Mashito and at Ammān (the 'Rabbah of the children of Ammon' of Dt 3^{11}), as well as the palace called Aivan-i Khusru, not far from Susa. The religious architecture of the period is represented by the remains of numerous fire-temples, like the *ātash-Kadah*, near Iṣfahān, and that at Abarguh or at Jaur, in the district south of Shiraz; or, again, by a portion of the crumbling sanctuary of brick at Ṭāq-i Sulaimān, south-east of Lake Urumiah. The style of construction of a Sasanian caravanserai may be judged by the stone ruins, said to be the work of Khusru I., 'Anūshirvān the Just' (A.D. 531–579), at Aghuan, between Teherān and Meshed. Sasanian architectural engineering is illustrated by several bridges and dams, as at Dizful and Shuster, or the stone aqueducts, descriptions of which may be seen in the standard works mentioned at the end of this article.

5. Muhammadan period (from A.D. 661).—As already stated, the history of the Muhammadan period of Persian architecture forms a special branch of Muslim art, and the best examples of its development are found in the mosques, the religious edifices which supplanted the old fire-temples after Persia adopted Islām as its national faith, and which are characterized by towering domes (sometimes bulbous in shape), high façades with immense recessed arches, graceful minarets that give balance on either side, and ornamental exteriors decorated with glazed tiles and scroll-like arabesques. The architectural remains of the first period of the Khalīfate, the Umayyads and Abbāsids (A.D. 661–847), have mostly been destroyed by the long series of wars that have devastated Persia from time to time; but the foundation of the mosque of Harūn al-Rashīd at Kazvin (A.D. 786) belongs to that epoch, and a mosque at Shiraz, built in the latter part of the 9th cent. by the Safarid Amr ibn Laith, is numbered among the older remains. To the early Ghaznavid age (10th cent. A.D.) may possibly belong the tower-like tombs at Rai and Hamadan, but it is more probable that they come from the later Seljuk era (roughly, 1030–1150) or from the Mongol age (1160–1260). The same is true of a crumbling mausoleum at Tus, near Meshed, as it is said to be the tomb of the poet Firdausi, who died in the year A.D. 1020; but although the poet's grave is actually near by, it is more likely that the structure is of Seljuk origin, since it closely resembles the mausoleum built by Sultan Sanjar at Merv about 1150. Good examples of the earlier Mongol period are to be seen in the tower-tombs of Jenghiz Khan's grandson Hūlāgū (d. 1265) and his queen at Maragha, the royal seat of the

Mongols in north-western Persia; while the mausoleum of Uljaitu Khodabandah (d. 1316) is of the later Mongol period. The best illustration of the architecture which flourished during the rule of the Tartars, after Timur's invasion, is the beautiful Masjid-i Kabud, or 'Blue Mosque,' erected in 1403 by Shah Jahan at Tabriz. Muhammadan architecture in Persia reached its height in the reign of Shah Abbās the Great (1585–1628), and is well illustrated by the Masjid-i Shah, or 'Royal Mosque,' erected in 1612 at Iṣfahān, and by the other imperial edifices of the same ruler. The architectural activity of Shah Abbās was not confined to his capital, however, or to palaces and places of worship, but was exercised in the construction of caravanserais, bridges, and other useful structures in many parts of Persia, so that his name is widely known throughout the land as the patron of the builder's art.

The cities which best show the different styles of Muhammadan architecture are those which had the honour at one time or another to be the royal capital, like Iṣfahān, Kazvin, Tabriz, Sultanīya, and Shiraz; but hardly of lesser fame are Kum, Kashan, Meshed, Būstān, and Ardabil. Modern architectural tendencies are best observed in the present capital, Teherān, where it is possible to see even European elements combined with the most conservative features of the past. When viewed as a whole, it may be said that Persia's contribntion to the history of architecture, if not distinctly original, is, nevertheless, considerable, and deserves the attention of the student of religious art as well as the architectural specialist.

A. V. WILLIAMS JACKSON.

ARCHITECTURE (Phœnician). — Worshippers of the powers of nature, it is not surprising that the Phœnicians, in the earlier stages of their national existence, should have discarded the work of the architect and builder, and taken to worshipping in the 'high places' so often referred to in the Old Testament. That these were natural eminences, and not artificial erections, like those of the Babylonians and Assyrians, is quite clear from the statements concerning them. They were within easy access from the cities, and thither the people resorted when assembling for worship. How common they were may be gathered from the fact that they were the customary places for worship among the Israelites until the 7th cent. B.C.* The oracle on Carmel, which, according to Tacitus and Suetonius,† Vespasian consulted, was possibly a sacred place of this kind. The god consulted had neither statue nor temple, but only an altar which was much revered. This altar was probably of unhewn stones, like the one dedicated to Jahweh upon that same mount Carmel which Elijah re-built and consecrated anew on the day when he confounded the prophets of Baal.*

In all probability the Phœnicians would have continued worshipping in the same way, without temple and image, had it not been for foreign influence. The close relations, however, which the Phœnicians had with Egypt, brought them under the influence of that nationality, with its splendid temples and elaborate ritual, and the result was that they sought to imitate them, though they did so only to a certain extent, as far as our present knowledge goes.

The most perfect of the small imitations of Egyptian temples is that now called *al-Ma'bed*, 'the temple,' at Amrît near Tartûs. This erection is built in a court, 52 yds. by 60, hewn in the rock and levelled, the S. wall being about 16 ft. high. If there ever was any wall on the N. or front side, as is probable, it has now disappeared, and is replaced by a hedge. Remains of columns near the corners of the court suggest that the walls were flanked by cloisters. The 'temple' is in reality a cella,† and stands on a square mass of rock more than 10 ft. high and about 18 square, being composed of three enormous blocks of stone covered with a monolithic roof. The blocks having been superimposed, the structure was apparently carved out in the form it now presents. The opening is towards the N.; and the plain cornice with which it is decorated is the usual Egyptian one, advancing in front over the anterior face of the rock. It is thought probable that the entablature was supported by columns of metal. The ceiling is vaulted. The flooring within is slightly sunken, and is flanked by narrow platforms or benches, graded and sloping upwards towards the back, possibly to render those taking part in the ceremonies more visible to the people outside.‡ Slots for a rod at the opening suggest that a curtain hid the interior from the passers-by when there was no public ceremony, and square sunken holes near the entrance seem to mark the positions of candelabra or, perhaps, sacred columns. Renan has suggested that the rock-hewn court may anciently have been covered with water from a spring near, when the wall on the N. was in existence; and the appearance of the surface confirms this. If that be the case, it resembled two other similar sanctuaries near *'Ain al-Ḥaiyât*, 'the Serpent-Spring.' The more complete of these is a little monolithic chapel, now in ruins. It was rectangular in form, with a square opening in front, where it has an Egyptian cornice surmounted by uræus-serpents. It rested upon a rectangular block of stone about three metres thick by five wide, carried by a plinth of much smaller dimensions. On each side of the great rectangular stone are traces of a little stairway, which gave access to the platform formed by its upper surface.§ This shrine was about 5·50 metres high, and its slightly-vaulted ceiling was sculptured in relief with two great pairs of wings, one pair springing from the globe flanked by two uræi, and the other seemingly having as its centre an eagle's head.

Facing the chapel just described, and about 10 metres to the E., are the base and lower part of another chapel, nearly like it, but seemingly rather larger. There is hardly any doubt that they both formed part of the same architectural scheme, and it is possible that one was dedicated to a god and the other to a goddess, his spouse. They rise out of the water of a small lake or pond

§ Renan, *ib.* pl. 9; Perrot, *ib.* fig. 188.

supplied by the spring, and it is possible that this was also the case in ancient times. Backed by verdure, it must have been a secluded and sufficiently picturesque spot, and the difficulty of access to the shrines would naturally prevent their desecration.*

It is improbable, however, that these remains show the common religious architecture of their time, and the fanes of Astarte at Sidon and Melqart at Tyre were undoubtedly much more important and imposing structures, though Herodotus' description of the latter (ii. 44) does not enable any idea of its form to be gathered; to all appearance he was most struck by its two pillars (στῆλαι), 'one of pure gold and the other of an emerald stone of such size as to shine by night.' Another important shrine was that of Eshmûn on the left bank of the Nahr Auli, about an hour N. of Sidon. This was a rectangular erection built apparently on the side of the slope, remains of the walls and masonry of the terraces being still in existence. The slope looks towards the N., and it is possible that the sanctuary to Eshmûn was a shrine like that at Amrît, which has the same orientation. Large numbers of votive statuettes were found on the site. The stones of the shrine, however, seem to have been long ago carried away by the inhabitants of the country to build their houses with, and some, with holes, are used in olive-pressing.†

Of greater importance, perhaps, are the indications available for the architecture of the temple at Gebal, made known by coins of the Roman period.‡ On the left is shown a chapel, the front surmounted by a pediment. The whole front was open, flanked by pilasters supporting the pediment. At the top of the steps giving access to the interior was a tripod table, perhaps for offerings, and a strange emblem surmounted the point of the roof, which seems to have been decorated on each side with three rows of sunken panels.

Naturally the architecture of this building suggests Greek influence, and to all appearance it is a simple reproduction of the Egyptian shrine, but it may be noted that Babylonian architecture had something analogous (see p. 682), and may have been the true origin of the structure. What would seem to be due to Greek influence is the pointed roof.

The real ancient part, however, was probably the structure on the right, which shows a colonnade to which access was gained by a flight of steps, and a large court-yard, with columns—a kind of arcade—behind. The representation of this building was evidently altogether too much for the die-sinker, whose ideas of perspective were on a level with those of the Assyrians. Above the cornice of the colonnade is an erection of open work, behind which one sees a conical object towering high in the open—the emblem of the god of the place, corresponding with the sacred stones in which the divinity was supposed to reside.§

And here we again have the 'high place,' not formed out of the solid rock by the laborious quarrying of all the mass which was not needed, but by an enclosure of hewn stone, ornamented with a colonnade all round. This was naturally much more elaborate than the simple clearings in the open, and also more æsthetic than the hill-enclosures marked off by simple rows of tall stones.

§ Upon these objects see p. 884.

But it will be asked: Were these two forms—the 'high place' and the chapel or mountain-shrine—the only architectural creations of the Phœnicians for the purpose of worship? All that can be said is that they are the principal forms found. It seems not improbable, however, that they had others, and, as is well known, the temple of Solomon at Jerusalem was built by workmen and material supplied to that king by Hiram of Tyre. If not in that king's structure, there is at least in the temple as described by Ezekiel (40^1–43^{27} etc.), according to Chipiez's restorations,* a certain likeness to the Phœnician temples as shown on the coins of Cyprus, which seem to have been erections of imposing architectural appearance.

In Cyprus the most famous temples were those of Paphos, Amathus, Idalium, and Golgos, in which places were Phœnician settlements, as also, probably, at Citium (now Larnaca), Salamis, and other sites. From Cypriote coins,† an idea may be gained of the celebrated temple at Paphos, dedicated to Venus or Astarte. It consisted of a central erection—a kind of pylon—in the form of two narrow towers connected, in the upper part, by a chamber or chambers furnished with three windows. Below this was the entrance, in which the spectator could see the sacred figure adored there—a conical stone surmounted by a naïve indication of a head, and two rudimentary arms. Perrot suggests that the size of the opening has been purposely exaggerated by the engraver in order to exhibit the divine image, which was, in reality, not at the entrance, but at the far end of the sanctuary. On each side of the pylon were porticoes or colonnades, flat-roofed, hardly more than half the height of the central portion, surmounted by images of the doves sacred to the goddess. Under these arcades objects like candelabra are shown, the upper part arranged either for the purpose of giving light or for the burning of incense. Above the upper structure, and between the two towers, are shown a star and the crescent moon—emblems of the goddess. The space in front of the building seems to be represented paved, and enclosed by a semicircular railing, provided with a double gate. Within this enclosure is a dove, apparently seeking food. The details vary somewhat in the different coins,‡ and it is to be supposed that the engraver had no intention of giving more than a general idea of the building, so that numerous accessories have been omitted. According to Di Cesnola, the body of the edifice was rectangular, 67 metres by 50, surrounded by a court-yard 210 by 164, more or less. As it is based upon actual exploration, it is to be preferred to the plan given by Gerhard after the indications of travellers who visited the site in the early years of the 19th cent.;§ but how the latter could have obtained the exceedingly probable details of the interior which he gives is difficult to understand. According to his plan, there were two enclosures, the first provided with four entrances, and surrounded by a colonnade. A doorway admitted to the second enclosure, in which was the temple. There we see the semicircular railing, the paved forecourt, the sites of the towers, the central portion of the building, divided into a vestibule, a large hall, and a sanctuary wherein was the sacred image; likewise the lateral structures, each with four chambers, to which admission was gained only

* Perrot-Chipiez, vol. iv. pp. 263, 275, 289, and pl. v.
† Guigniant, *Religions de l'antiquité*, pl. liv., p. 206; Perrot-Chipiez, *Phénicie*, fig. 199.
‡ Cf. Perrot-Chipiez, *Phénicie*, fig. 58 (reproduced from Donaldson's *Architectura Numismatica*) with fig. 199.
§ Perrot-Chipiez, *ib.* fig. 200 (from Gerhard's *Akademische Abhandlungen*, pl. 41).

from the large central hall, and one (that at the end) which could be entered only from the sanctuary. The two plans are so different that one asks whether they could have been taken from the same remains. According to Tacitus,* the stone emblematic of the goddess was in the open air, indicating that the place where it stood had no roof; notwithstanding this, it is said never to have been wet with rain. This rather favours Di Cesnola's plan, which, however, does not agree with the picture on the coins. Probably further exploration is needed.

In the neighbourhood, but nearer to the sea, Di Cesnola† found two conical stones still in position, which, it is suggested, are all that remain of some sacred spot—perhaps the traditional landing-place of the goddess when she first visited the island. If this be correct, the site was the spot where the pilgrims to the sacred places on the island commenced their pious visits. Perrot suggests that this site is represented on another Cypriote coin,‡ in which two sharply-pointed cones are shown, one on each side of two columns, resembling the side-posts of a doorway, standing on bases, and connected at a distance of about three-quarters of their height by joists, intended, to all appearance, to hold them in position. The whole seems to have been provided with some protective covering of the nature of an awning. Under this seeming doorway is a conical object on a plinth, surmounted by a flat top, on which stands a dove, the emblem of the goddess. In front is a semicircular enclosure with a single central gate. The whole shows a simple form of the temple at Paphos, without the lateral structures or aisles.

At Golgos the temple was a parallelogram,§ the roof supported by five rows of three columns each. There were two doors, one S., the other E. A large cone of grey stone found on the site implies that the building was dedicated to the goddess of Paphos. It resembles in form, but on a large scale, the terra-cotta cones found in such numbers at Telloh in S. Babylonia. Many figures of women holding or suckling their children, and cows suckling their calves, were discovered at many points on the site. Numerous pedestals, each of which anciently bore a statue, and some of them two, were found. Ceccaldi, who studied the objects disinterred there, has given a very vivid picture of the appearance of the temple when it was still standing. Its four walls were of sun-baked brick covered with white or coloured cement, and the pillars were of wood, with stone capitals, the two sides of the roof which they supported having only a very slight slope, forming a terrace, like the present Cypriote roofs. The roof was of wood covered with reeds and mats, upon which was spread a thick layer of earth beaten down hard. The exterior was therefore of a very simple appearance. The interior was lighted only by means of the large doorways, wherein one saw a motionless and silent crowd of stone-carved figures, their features and robes tinted with the colour of nature, surrounding the mystic cone as perpetual worshippers. Shrine-like stone lamps illuminated the grinning ex-votos hanging in recesses on the walls, which last were adorned with curious pictures. Strange sculptures adorned the circuit of the building, where the slanting rays of light were reflected on the white and polished tiling of the floors.

§ Di Cesnola, *Cyprus*, p. 139; Perrot-Chipiez, *Phénicie*, fig. 204.

This is a vivid and probable picture, of which, however, some of the details require verification. Perrot suggests that this building was simply a treasury or museum belonging to the real temple.

A few underground buildings exist, the most noteworthy being the crypt at Curium,* in which were found many objects of value. Having descended the steps and passed along a short passage, one finds three successive bayed rooms, and at right angles with these, a fourth, with a further length of the passage. This interesting and well-built structure seems to have been used as a treasure-chamber, but whether it was originally intended for such is uncertain. That at Larnaca is known as the *Panaghia Phaneromini*. Enormous blocks, as well as small stones, have been used in this construction, which consists of a vestibule with a door leading to a small chamber, within which was found an old spring, probably some sacred source. The roof was formed of two large blocks of stone considerably arched on the under side. It has been thought to be a tomb; but in view of the existence of the spring, this is unlikely. It was probably a sacred well, much resorted to by the inhabitants and the people of the neighbouring port.

Far behind the perfection of the temples of Phœnicia and Cyprus are those of Malta and Gaulos (now Gozzo). Artistically and architecturally, a wide gap separates them from the structures of the Phœnicians, but the conical (sacred) stones found therein have caused them to be regarded as certainly Phœnician. Evans and others, however, are of opinion that these buildings are really Libyan. At Gozzo there are two temples,† side by side, and joined together by a wall, which forms a kind of rough façade. Passing through a narrow entrance, one reaches, in the case of the larger building, first a small and afterwards, continuing along the passage, a larger hall arranged at right angles thereto. The rear termination of the building is an apse in the form of a semicircle, and the whole suggests the arrangement of a church choir with deep bays. In consequence of its nearness, the smaller building has the first hall larger than the second, and the semicircular apse at the end is decidedly smaller; otherwise the arrangement is in both cases the same. In the various apses of which the building consists, the ground is made to mount by means of steps and sloping pavement. Barriers possibly railed off these raised bays, which then resembled the chapels in Catholic churches. It was in the right-hand bay, in the first hall, that the cone was found which gave the clue to the nature of these structures. Though symmetrically planned, the individual bays are not by any means regular in shape, and the stone supports for the furniture or sacred objects of the shrines seem to be placed without any attempt at orderly arrangement.

Still more irregular in shape and careless in arrangement is the temple of Hagiar Kim,‡ Malta, in which, moreover, the want of care and regularity extends also to the arrangement of the stones that form the walls, which are in some cases of enormous size.§ There are two entrances, giving access to two bays or apses on the E. and

* Di Cesnola, *Cyprus*, p. 304, reproduced in Perrot-Chipiez, *Phénicie*, fig. 216.

† They are called the *Gigantiga*, the enormous stones used in their construction having led to the tradition that they were the work of giant builders. Plans and views, from La Marmora, *Nouvelles Annales de l'institut de correspondance archéologique, publiées par la section française*, i., Paris, 1832, pp. 1–32 and pl. i.–ii., are published in Perrot-Chipiez, *Phénicie*, figs. 221–224.

§ *Ib.* figs. 219, 220.

four on the W., but the southernmost of each seems to have been separated from the rest, and partitions in the case of two others are shown on the plan. Stones decorated with spiral ornaments show that attempts at decoration were made; the ground upon which the spirals are carved is covered with a number of minute holes, emblematic, it is supposed, of the starry vault of heaven.* A striking altar,† with flutings, decorated with a representation of a growing tree, has the same ground-work, which covers also many of the great blocks of stone used in the building. Another altar, like a small table‡ with a thick central support—a type met with often in Syria—was found in one of the large bays.

Sculptures show that similar temples to those in Syria existed, in Punic times, in Sicily and Carthage. One of these was known under the name of *Erek Ḥayim*, 'Length of Lives,' and was dedicated to Astarte as goddess of longevity, whence the name of Eryx, given by the Greeks to the city where it was. It arose on the peak of a mountain, within that mighty wall which protected the summit. Judging from a stele found at Lilybæum (Marsala), a temple to Hammon existed there. The upper part of this monument§ shows a priest adoring before a candelabrum, or fire altar, behind which is the sacred cone with 'arms and head,' similar to the symbols found on the votive stelæ at Carthage. Inscriptions dedicated to *Ba'al Samaim*, 'the lord of the heavens,' *Astarte Erek Ḥayim*, 'Astarte length of lives,' *Eshmûn*, *Ba'al Ḥammôn*, and *Elat*, make it probable that Phœnician temples to these deities existed in Sardinia, where they were found. A shrine‖ in the Egyptian style, found at Sulcis (height 28 in.), has on the cornice a disc, and a row of uræi above. In another example from the same place,¶ carved with a goddess in Greek costume, we have a mixture of styles, Doric columns being introduced as supports of an entablature showing the Egyptian winged disc surmounted by a row of uræi.

Carthage and its dependencies have but little to offer in the way of religious architecture in the Phœnician style. At Ebba a lintel of a doorway** carved with two lotus-flowers, the sun with rays above them, and two crescent moons on each side, and at Jezza a capital of a column†† in modified Ionic, suggesting Cypriote influence, testify to buildings erected there. At Carthage itself the great temple of Eshmûn, demolished by the Romans, was re-built as the temple of Æsculapius; but nothing now exists of it, as the church of St. Louis and its dependencies at present cover the site.

The ornamentation of the Phœnician temples has been referred to from time to time in the preceding pages, but a few additional words thereon are necessary. The cornices are often plain, but when a row of uræi-serpents was added,‡‡ the effect was decidedly decorative. Exceedingly effective was the mixed style of the entablature of the temple at Gebal,§§ with its Græco-Roman decoration, including scrolls and flowers flanking a conventional Egyptian winged disc-emblem with uræi. The doorway at Um-al-Awamid,‖‖ being much more Egyptian in style, forms a striking piece for comparison. Egyptian influence is again manifest in the relief showing a sphinx, beautifully carved, found at Arad.¶¶

Apparently it was a favourite decoration with the Phœnicians, for it occurs also as the support of a throne in the decorative panel-relief showing a seated personage in the presence of the sacred fire (see below, p. 885 f.). Gradine ornaments,* such as are found in Assyro-Babylonian reliefs showing fortifications, occur on alabaster slabs from Gebal, now in the Louvre. They suggest the Assyro-Babylonian temple-tower, surmounting a decoration of flowers in squares over a band of laurel. This gradine-ornament is also applied to altars,† even of the Roman epoch. As in the case of the round tower-like monument of the tomb of Amrît,‡ however, the idea that it was really a battlement is lost by the material between the gradines being left; there are no openings. The great disadvantage to the modern student of their decoration, however, is that the remains are so scanty.

There is hardly any doubt that the architecture of the Phœnicians has had an influence on that of the nations around. Perrot and Chipiez cite the old mosques of Cairo, Amru, and Ṭūlūn, with their great rectangular courts surrounded on all four sides by rows of columns, the idol alone being absent. 'If one wish to have the type complete, one must go as far as Mecca, and enter into the Ka'ba, where even the triumph of the Qur'ān has not succeeded in ousting the primitive bethel, the black stone, which, set up in the sanctuary, has received the homage of the Arab tribes throughout many centuries' (*Phénicie*, p. 315 f.).

But perhaps these temples are not derived directly from Phœnician architecture. We have always to take into consideration the possibility of their having come down to the nations which produced them by some collateral line, and the likeness between them and the fanes of Phœnicia may be due to action and reaction. Whatever reservations may be made, however, the evidence of history and the monuments seems to show that the influence of Phœnicia preponderated.

T. G. Pinches.

ARCHITECTURE (Roman).—General characteristics.—If it be necessary in the case of Greece to point out that religious buildings were but a part of the architectural activity of the people, it is still more necessary in the case of Rome. Roman religious architecture plays a very small and comparatively unimportant rôle. Her baths, her palaces, her amphitheatres, and other public buildings were all upon a grander scale than her temples.

When Rome became mistress of the world, although she had at that time no architecture of her own, she made use of artists from all nations, and thus arose a composite style of the architectures of the world, in which Greece played by far the largest part. The origin of the Roman temples seems to have been partly Etruscan, partly Greek; but whatever part Etruscan architecture played in other branches of Roman architecture, the Roman temple in its final form was almost wholly Greek. The fact was that the great development of Roman architecture was almost entirely in the hands of Greek artists, and it is by no means easy to determine how much can really be considered Roman at all.

The true Greek style was trabeated, the arch, as has been shown, being only occasionally used. The style of the Romans, however, was a hybrid, partly arcuated and partly trabeated, and in their hands the fusion of the two elements never became complete. It is generally said that the arch in Roman architecture is the arch of the Etruscans: it is, however, doubtful whether it was not an introduction of the Greek artists of the East

* Perrot-Chipiez, *Phénicie*, fig. 77.
† *Ib.* fig. 78. ‡ *Ib.* fig. 95.

and Alexandria. In any case both the arch and the barrel vault date back to remote ages in the East, and the later Greek architects were more likely to be influenced by these traditions than by the comparatively obscure work of Etruria. At the same time, fine arches with large voussoirs were built by the Etruscans, as in the canal on the Marta at Graviscæ, supposed to date from the beginning of the 7th cent. B.C., or the Cloaca Maxima at Rome of the 6th. If, however, the Romans themselves had continued the tradition and built in a fine stone arched style, it at least seems probable that some remains, however scanty, would have come down to us. Indeed, we know that early Roman architecture was of brick, and brick vaulting with voussoirs occurs in Egypt as far back as B.C. 3500. Even the intersecting vault is found in a Greek example at Pergamos dating from the 2nd cent. B.C. The earliest surviving Roman building that had arches is the Tabularium, and it dates only from B.C. 78, long after the sack of Corinth, when Rome passed under the rule of Greece intellectually and artistically. Arches were in common everyday use in Greece, at any rate for structural purposes, as early as the time of Eumenes I. (B.C. 263–241), so there is no reason to suppose that Greek architects working for Rome were in any way necessarily indebted to the Etruscans for their conceptions. Even the triumphal arch—that ornamental form which we are wont to consider typically Roman—was built in Athens in B.C. 318. The earliest instance of such an arch in Rome is that of Scipio Africanus (B.C. 190), of which we have the record, but no remains. The most that can be said, then, is that it is not impossible that the Romans may have had a developed arcuated style derived from the Etruscans before they fell under the dominion of Greece; but there is no evidence of any kind, and, as far as existing remains are concerned, there are no new developments that precede Greek work. The attached column, for instance, sometimes spoken of as a Roman invention, occurs in the Arsinoeion in but slightly modified form, in the monument of Lysicrates in Athens, and at Phigalia, even if those of the Erechtheum were of Roman date.

With regard to their brick and concrete construction it is otherwise. The Romans were certainly great engineers. There is, however, not the same intellectual nicety about Roman work that there is in Greek work, and this was never acquired. When the Roman Empire was finally divided, the Greek or Byzantine portion at once began to develop a more scientific style in marked contrast with the ruder work of the West. Roman work was practical, rough and ready, often grandiose, but lacking in the finer artistic sense.

It is likely that we shall never be able to say what elements are Roman and what are Hellenistic, but it is possibly in the general planning that the Roman influence is strongest.

The Romans borrowed the Greek orders; or perhaps a more correct way of putting it is to say that the Greek architects working for Rome used their own orders, and by slow degrees trained a native school. **The Doric order** became very debased, and is found in a great variety of forms. The simpler of these forms are commonly grouped together as Tuscan, but they differ very much among themselves, and there is no historical evidence for any Tuscan origin. Vitruvius uses the term, but it is impossible to draw any clear dividing line between Tuscan and the debased Doric. The cause of the common error is that the Renaissance architects did make such a hard and fast division. The term as applied to Renaissance work has a definite meaning, but has no relation to anything in Rome. There was a Roman tendency to dispense with the fluting of Greek work both in Doric and Ionic, and occasionally in the Corinthian order, which greatly detracts from the strong refined vertical character of the shaft. Flutings were expensive to work, and were not showy enough to please Roman taste, which preferred monolithic shafts in hard brightly-coloured marbles in which flutings would have little effect. The column loses the sturdy proportions of Greek Doric, and tends to assimilate itself to the proportions of the other orders. In most of the existing examples of Roman Doric there is a base, but this is absent in early examples such as those at Pompeii, which are much more Greek in feeling. It has been suggested that the origin of the base is Etruscan, but its absence in early work is against this theory; and the part that Vitruvius would assign to Etruscan influence in architecture is not much more of a reality than the part assigned by Virgil to Æneas in Roman history. The contours gradually deteriorate, and the echinos of the Doric column speedily becomes a simple quarter round. In the almost unique early example of the Temple of Hercules at Cora the hyperbolic curve is found, and is obviously executed by Greeks. The architrave shrinks in importance, and the whole entablature is much shallower. There is a marked tendency for the intercolumniations to become wider. This is mainly the result of the fact that the order as such is not an essential part of the construction in Roman work. It does not govern the building, but is merely something applied afterwards, and has to suit its proportions to the available space. It is to this that we owe the introduction of the pedestal as a regular feature, which occurs only occasionally in Greek work. The architrave is set farther back than in Greek architecture, and the line of its face tends to fall within the base (fig. 1). The beautiful sculpture

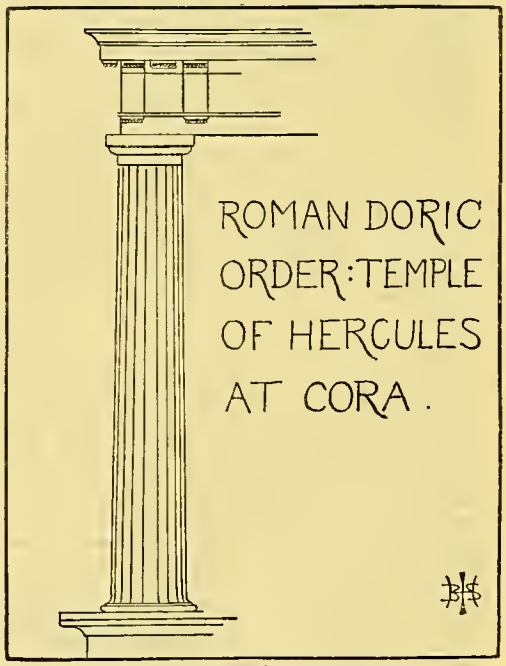

FIG. 1.

which was the glory of Greek buildings, and particularly of the Doric order, is absent, and its place is often taken by trivial conventionalities, such as wreathed skulls. The origin of this feature is probably to be found in the actual skulls of

victims hung upon the altars. The Ionic order remains the same in its principal features, but the

FIG. 2.

capital is not infrequently found with the volutes set anglewise (fig. 2). They are, however, comparatively rare, although the text-books speak of them as almost universal. This arrangement in Greek work at Phigalia has already been noted, and its first known occurrence in Italy is at Pompeii, where the refined carving marks it as the work of Greek hands. The volute in Roman Ionic projects very much less than in Greek examples, and the proportions are not at all satisfactory. There is generally a dentil course beneath the cornice as in Asiatic Greek examples: this occurs even in Roman Doric in the Theatre of Marcellus. The Roman dentils, however, are set much closer together and are shallower than in Greek work, generally with a fillet underneath.

The tendency throughout is towards greater enrichment, clearly seen in the choice of the **Corinthian** as the favourite Roman order. In Greek hands, as at Epidaurus, or the choragic monument of Lysicrates, this order, in spite of its richness, is yet restrained and most delicate in its refinement. In Roman work this is lost, and mere carving takes the place of the sculpture which is still found in the choragic monument. The foliage, too, loses its crispness, and the acanthus mollis takes the place of the acanthus spinosus (fig. 6 in ARCHITECTURE [Greek]). In some instances, particularly in triumphal arches, the small angle volutes are greatly enlarged, and may have helped to popularize the angle treatment of Roman Ionic. The capital then partakes of the nature of both Ionic and Corinthian, and the egg and dart molding is introduced above the acanthus. Thus treated, the order is sometimes called the Composite order, a name unknown to Vitruvius, and not at all necessary: it is in no true sense a distinct order, although the architects of the Renaissance en-

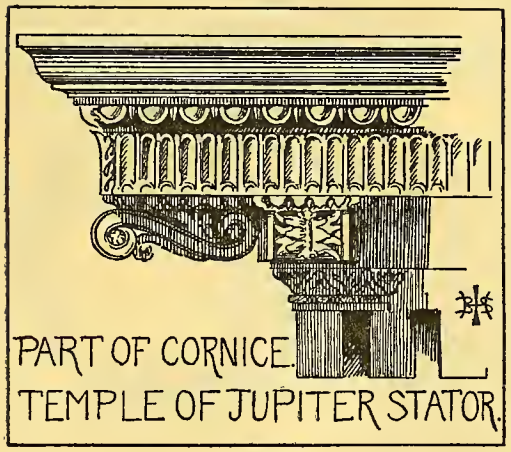

FIG. 3.

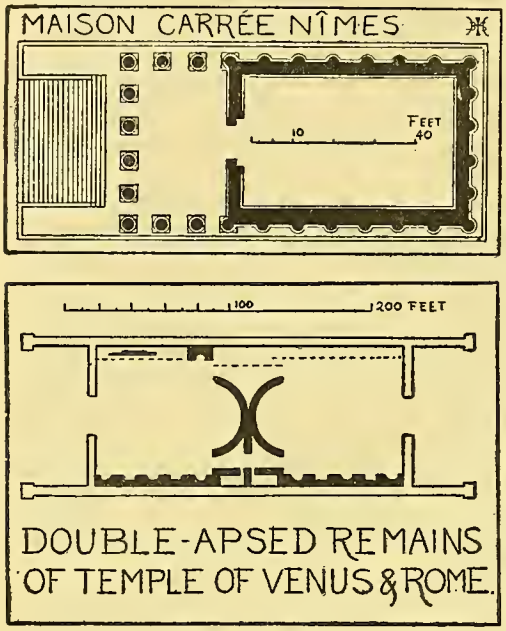
deavoured to make it so. The origin of the arrangement is as usual Greek, and in the temple of Apollo at Naucratis, the Erechtheum itself, and a capital in the forum of Trajan, we see it in its undeveloped form.

The entablature in Roman Corinthian work is very ornate. The architrave is divided by several moldings more or less enriched. The frieze is often decorated with continuous scroll work founded on the acanthus leaf, which is beautiful in itself although giving a restless effect as the result of over-ornamentation. Below the corona a new feature is introduced in the modillions—ornamental brackets which give an æsthetic sense of support (fig. 3).



RELIGIOUS BUILDINGS.—Of course in most of the great secular work the arch plays an important part, and the orders are placed as ornaments in front of the real arched construction; but except in the case of the propylæa in the East before the sacred temenos, the arch practically plays no part in religious work. The vault, however, does occur (see below). The religious buildings of the Romans were of comparatively small importance, and the great *thermæ* are far more typical of Roman work than the temples. The temples, too, were used for many other besides religious purposes, just as was the case with the great mediæval cathedrals. The temple of Concord was not only an art museum of the spoils of the world, but was often used for meetings of the senate, as also was the temple of Mars Ultor. The public weights and measures office was in the temple of Castor. But the Roman temples, although in their main features simply modifications of the Greek, have certain distinctive marks of their own. It seems probable that the early Etruscan temples were often of three cellæ placed side by side, and, moreover, that it was the custom to erect them upon a lofty base, or podium.

The Etruscan architecture apparently was largely of wood, and terra-cotta ornaments played a very important part, noticeably in a peculiar fringe of ornamented terra-cotta tiles hanging from under the eaves and apparently also from the main beam of the portico. These features can be traced in Roman work—the lofty podium with a great flight of steps approaching the main portico, the wide intercolumniations, and the use of terra-cotta ornaments—and even the three-celled temple may have had its influence in the great breadth of the Roman temple, or in the case of a triple temple such as occurs at Sbeitla in N. Africa. [See ART AND ARCHITECTURE (Etruscan and Early Italic), p. 863].

The ruins of the temple of Mars Ultor and three columns of the temple of Castor and Pollux (completed A.D. 6) are probably the earliest extant remains. There may, however, have been earlier examples, as Greece can be said to have begun its dominion over Rome in B.C. 146. The temple of Jupiter Capitolinus was possibly largely Etruscan. Generally speaking, the earlier the date the purer the work and the more marked the Greek influence. It has been observed that the Greek temple was orientated; but this was not the case with Roman temples, and we find them facing in all directions, generally planned in relation to their architectural surroundings. We find them all round the Forum Romanum, for instance, each facing into the forum. As in the case of Greece, the altar was not in the temple but outside, and the exact *raison d'être* of the temple itself is by no means so clearly defined.

The typical Roman temple, then, is a rectangular building with a cella very much wider than was usual in Greece. In the temple of Concord the width was greater than the depth. This may possibly have been the result of the earlier three-celled temple or of the many uses to which the

Roman temple was put. The architectural effect was always concentrated upon the front, and the back of the temple was often absolutely plain. As part of the same tendency we may notice that the temples were generally only *pseudo*-peripteral, with attached columns round three sides of the cella and an abnormally large front portico. The temple of Fortuna Virilis is a good early example; there is a very fine later temple known as the Maison Carrée at Nîmes (fig. 4).

FIGS. 4 AND 5.

The Roman temples within were apparently rarely divided into nave and aisles, so that a greater floor space was obtained, but the span was sometimes reduced by internal columns close against the wall, after the manner of the Greek temple at Phigalia. Occasionally there was an apse, as in the temple of Mars Ultor; and in the temple of Venus and Rome there was an interesting arrangement of a double temple with two cellæ and apses back to back (fig. 5). The whole in this case was surrounded by a court and stoa.

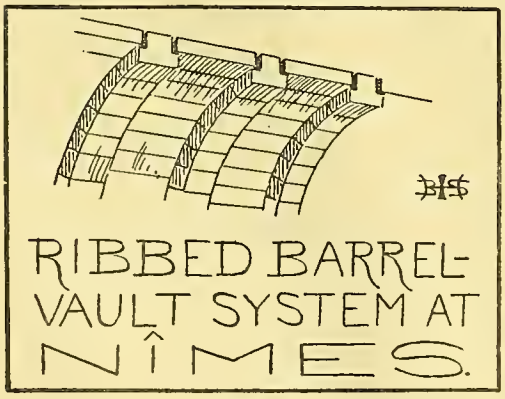


FIG. 6.

The roof appears to have been normally of wood, but certainly in a few instances a concrete or stone vault was employed, as in the above-mentioned temple of Venus and Rome, the temple of Neptune, the temple of Ceres and Proserpine, and the temple at Nîmes known as the Nymphæum or the Baths of Diana, which has a stone barrel-vault supported on stone arches which rested upon attached columns (fig. 6).

In front of the temple was a great flight of steps generally flanked by two projecting portions of the podium, the steps not extending the entire width of the building. In the temple of Minerva at Assisi the steps are carried between the columns which are raised on pedestals. This was probably from want of space.

A favourite form of temple with the Romans was the circular building which had become popular in Greece during the 4th and 3rd centuries B.C. It has been suggested that the Roman circular temple had an independent Etruscan origin. Even if this be the case with regard to the mere fact of the plan being circular, it has certainly nothing whatever to do with the actual form, which is simply a copy of Greek work. The lofty podium is generally found in Roman examples; but this, too, occurs in Greek examples of much earlier date. The picturesquely situate temple of Vesta at Tivoli is a fine example, of which the cella itself may even date back to the close of the 1st cent. B.C., although the Corinthian peristyle is later (fig. 7).

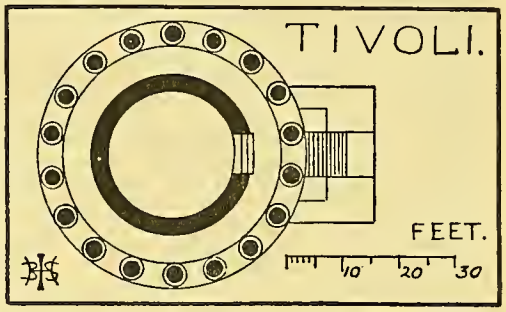

FIG. 7.

By far the most remarkable of the circular temples, and indeed of all the Roman temples, is the celebrated Pantheon (fig. 8)—a great building 142 ft. 6 in. in diameter, 2 ft. in excess of the domed reading-room of the British Museum. The exterior is plain, not to say ugly; but originally the brick was faced with marble up to the first string course, and above this with stucco, which may possibly have somewhat improved the general appearance although not actually affecting the building architecturally. It is approached by a great portico built from the spoils of Agrippa's temple, which

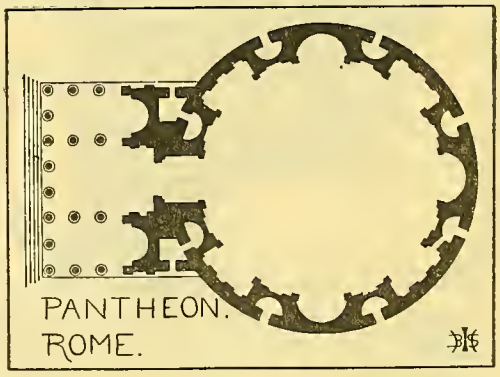

FIG. 8.

was taken down for that purpose. This fact was discovered in 1892, and is some consolation to those

who have always maintained that the portico is hopelessly out of place, and ruins the severe dignity that the plain circular building might otherwise have possessed. The date of the main building also has conclusively been proved to be A.D. 120–124, from the stamps upon the bricks of which it is constructed. This is a most important fact, as the assignment of the building to Agrippa has led to many wrong inferences with regard to the history of dome construction.

The building occupies the site of what was once an open circular piazza, the pavement of which has been found some 7 or 8 ft. below the floor of the present building. The walls are 20 ft. in thickness, containing eight great recesses three of which are apses: the highest faces the entrance on the main axis, and the other two are at the extremities of the diameter, at right angles to the main axis. The entrance itself is a great rectangular recess covered by a barrel-vault, and between these four recesses are four others, all of rectangular form. Except in the case of the entrance and the main apse opposite to it, all the recesses have two columns *in antis* in front. The dome is divided in its lower part by vertical and horizontal ribs into five ranges of thirty-two coffers. Above this it is plain, and the whole building is lit by a huge circular hypæthral opening 30 ft. across. Altogether the interior effect ranks very high among the great buildings of the world.

Under Roman rule many great temples were built in many other countries than Italy, but, save in those countries that had no architectural styles of their own, it is misleading to call them Roman. Particularly in the East we find many buildings that are practically simply a development of Hellenistic architecture. The great temples of Syria, for instance, are not placed at the end of the fora as in Rome, but in a temenos of their own as in Greece, with propylæa leading into them. With one exception too (Baalbek) they are orientated in the Greek manner. Of this type is the great temenos of the temple of the Sun at Palmyra. In most instances, just as at Athens, the propylæa have a wider intercolumniation in the centre, but it was spanned by an arch, round which the entablature is carried. The propylæa of Damascus (fig. 9), which may be dated

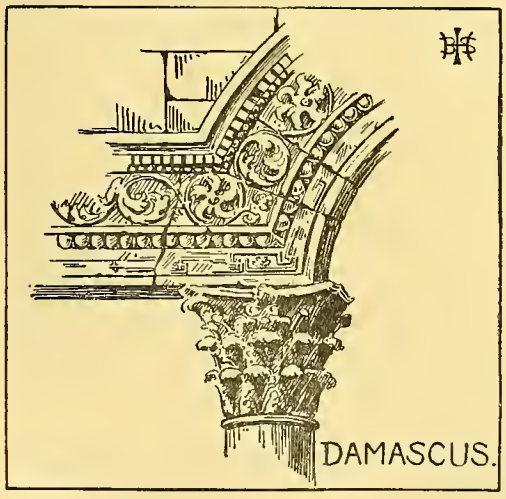

FIG. 9.

c. 110 A.D., or not much later, are probably the first instance, and a similar dated example occurs in the temple of Atil (A.D. 151). Baalbek (A.D. 160) and probably Palmyra were the same. The invention—if so it may be termed—appears to be that of Apollodoros, a Greek of Damascus, and seems a natural development of the arches of later Greek tradition already noted. It afterwards appears in Diocletian's Palace at Spalato, on the north-east coast of the Adriatic (*c.* 305 A.D.). It marks an important step, because hitherto the arch had always been carried by portions of walls or piers. On the other hand, the columns had never before carried anything but a horizontal entablature; and the piers and arches behind, with the columns and entablature in front, always remained two distinct and irreconcilable elements. Indeed, it was left for the Byzantine and Gothic architects to work out truly homogeneous styles of column and arch.

Of these Syrian examples the finest is that at Baalbek, which is built upon a great platform forming an acropolis. The general setting out is probably not Roman, and some of the substructure is pre-Roman in date. It was approached by great propylæa of Roman times, the restoration of which is largely conjectural. An interesting feature is the hexagonal court, surrounded by a double peristyle upon which the propylæa opened. The hexagonal court leads in its turn to a great square court, at the end of which, somewhat in the Roman manner, is the larger of the two temples. Apparently it was never completed. The other temple to the south, the temple of Jupiter, is a very fine piece of work. In some ways the building was a compound of Greek and Roman feeling. It was peripteral with two ranges of columns in the front, but the portico was very deep, and the central intercolumniation was wider than the rest. The interior had attached columns after the manner of the temple at Phigalia, except that the entablature was broken and carried round and back between the columns. It probably had a flat roof, except at the far end, where there was a small vaulted recess, about half the total width, approached by a flight of steps. A curious feature is a two-storey division into shallow niches between the columns, which has a very unpleasing effect. The lower one is arched, with a horizontal cornice, and the upper has only the cornice, but is surmounted by a pediment. The carving is bold and good, and shows the influence of Greek tradition.

Construction.—The Roman method of construc-

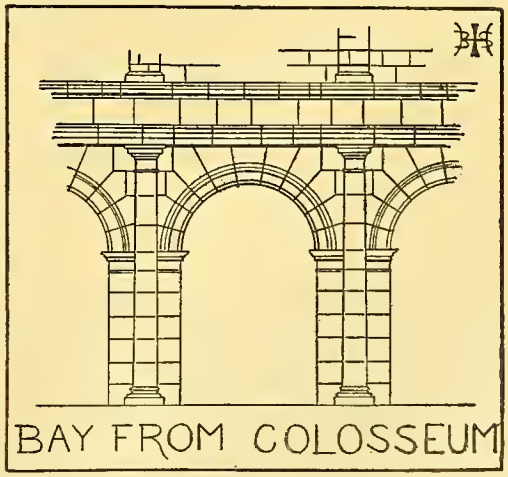

FIG. 10.

tion was very different from that of Greece. Whereas the Greeks generally built in large stone blocks bonding right through the wall, the

Romans built mainly in brick and concrete, and the finer materials were used only for facing. In Rome itself even brick was never used throughout, although in the provinces brick walls or courses of stone and brick alternately are not uncommon. Whether brick or stone was used in the core of the wall or not, the outer face was invariably covered with stucco or some finer material. When brick or stone occurs, its use is not easy to determine, as it would neither add to the strength of the wall, nor admit of its being built without planking to keep the concrete in position while setting. Bricks were of flat triangular shape, and stones pyramidal. 'Opus incertum' was work where the stones were more or less irregular in shape, and 'opus reticulatum' where they were dressed to a true square, and set diagonal-wise in the wall (fig. 11). In either case occasional courses of large flat bricks, 1 ft. 11 in. long, bonding through the wall, were used. A similar method was adopted with arches to prevent the concrete from spreading and settling down before it had set (fig. 11). The marble or other facings were secured to the wall by iron or bronze cramps running into the body of the wall (fig. 11).

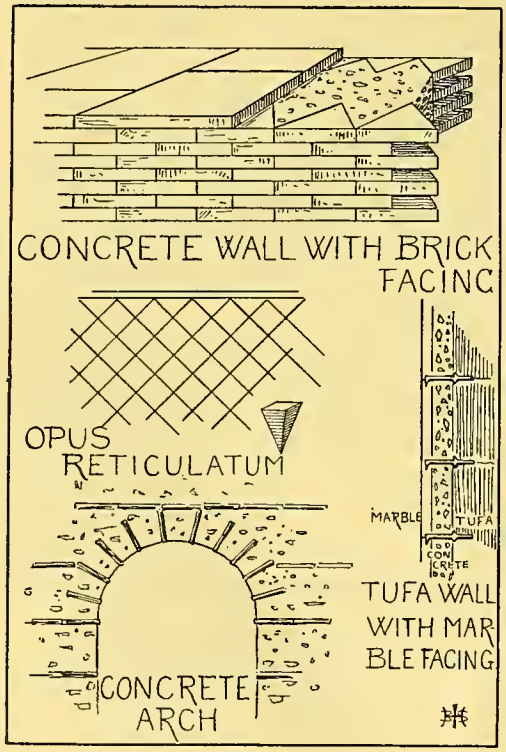

FIG. 11.

In vaults and domes, arches or ribs of brick were built upon light wooden centering, and cross bonding bricks dividing the whole into compartments were inserted at intervals. The concrete was then poured into these, and the whole set into one solid mass, exerting no outward thrust whatever. Stone vaults, instead of concrete, were occasionally built in later days, as in the Nymphæum at Nîmes, mentioned above.

Ornamentation.—The ornamental work of the Romans was not nearly so good as their construction, which was sound and workmanlike, and of great durability. One even regrets that they ever attempted ornament at all, as the bold and simple majesty of their great work is only spoilt by the applied ornament. After all there is very little Roman work, if any, more pleasing than the Pont du Gard at Nîmes; and it has no ornament at all. One of the most delightful of their more purely architectural works is the gateway at Trèves, which is practically devoid of ornament. The ornament used by the Romans was all derived from Greek sources, but there is a roughness and want of delicacy that shows an entire ignorance of the subtlety and refinement of Greek work. The profiles of the moldings are nearly always segments of circles, instead of the subtle parabolic and hyperbolic curves of Greek art. Moreover, the molding, as a rule, does not depend for its effect upon the subtle gradations of light and shade produced by its own contour, but upon the elaboration of the carving cut upon it. Somewhat similarly we find a preference among the Roman architects for the acanthus mollis with its rounded and less precise form, whereas the Greeks preferred the acanthus spinosus with its more crisp refined lines (fig. 6, ARCHITECTURE [Greek]). It is true that the acanthus spinosus badly drawn is less satisfactory even than the other, but this kind of thing is well known—the greater the height, the worse the fall. The carving, too, although vigorous in its way, is rougher and much more mechanical than that of Greece. Instead of the fine sculpture that adorned the temples of Greece, we frequently find endless repetitions of ox-skulls and hanging festoons of fruit and flowers between. There was a great tendency to use the ornament in such profusion that it stultified itself. Such an example, for instance, as the arch at Beneventum is so overloaded that there are practically no plain surfaces at all, and the whole effect is worried and unsatisfying.

Colour was used in their buildings by the Romans as by the Greeks, and the great fondness of the Romans for marbles of many colours gave their buildings an opulence in effect that was one of their most marked characteristics.

One of the most important adjuncts of Roman ornament was the mosaic, which, however difficult to work satisfactorily, is undoubtedly more in consonance with architectonic feeling than any mere surface pigment.

Adequately to appreciate Roman work, it would be necessary to study much more than the religious architecture. Rome's finest achievements were in the *thermæ*—the great baths, which were the centres of Roman life, where literature was read and discussed, and politics debated. In these magnificent buildings it was the interior that was the greatest achievement. It was in interior effects that the Roman architects made the real architectural advance, giving to them a magnificence hitherto undreamed of. Magnificence was the aim and end of Roman art; subtlety and refinement were beyond its comprehension. However, of existing remains, it is a religious building—the Pantheon—that gives us the clearest conception of what this interior magnificence was; and for us the Pantheon, with its fine interior and poor exterior, is the great typical example of Roman achievement, as the Parthenon, with its delicate subtleties and sculpture of unsurpassable loveliness, is of Greek.

J. B. STOUGHTON HOLBORN.

ARCHITECTURE (Shinto).—There are indications that the original Shinto place of worship was, like the Roman *templum*, not a building, but simply a plot of ground consecrated for the purpose. It was probably enclosed by a row of twigs of the sacred evergreen *sakaki* tree stuck in the ground. 'Spirit terraces' for Shinto worship are mentioned in the old records, and the common word for a Shinto shrine, viz. *yashiro*, means 'house-equivalent,' *i.e.* a make-believe house for the god—no doubt a plot of ground of this kind. Another word for a shrine is *miya*, which means 'august house,' and is applied alike to a palace and a shrine. Sir Ernest Satow says (*TASJ*, 1874):

'The architecture of the Shinto temples is derived from the primeval hut, with more or less modification in proportion to the influence of Buddhism in each particular case. Those of the purest style retain the thatched roof, others are covered with thick shingling, while others have tiled, and even coppered, roofs. The projecting ends of the rafters (called *chigi*) have been somewhat lengthened, and carved more or less elaborately.'

It appears from a passage in the *Nihongi* that the *chigi* were restricted to Imperial residences and to Shinto shrines. Another distinctive feature of the shrine is a row of cigar-shaped pieces of timber laid cross-wise on the roof-tree. The walls consist of planks: the pillars supporting the roof are round, and without bases. The shrine has a wooden floor, raised some feet above the ground. There is a sort of balcony all round, with a flight of steps up to the entrance. A certain amount of brass ornament and wood-carving is used in some shrines, but, generally speaking, they are characterized by great simplicity. The wood-carving and metal ornamentation of some of them are traceable to Buddhist influences, and were removed when the shrines were 'purified' after the restoration of the Imperial power in 1868. They are always of wood, without paint or lacquer, which, of course, limits their duration. The shrines of Ise are renewed every twenty years. Nor are they of great size. In the 8th cent. a 'greater shrine' had only fourteen feet frontage. At the present day the outer shrine of Ise—that in honour of the Goddess of Food—measures 34 feet by 19 feet. The great majority of Shinto shrines are very tiny edifices.

The more important Shinto shrines are surrounded by a cluster of subsidiary buildings, which serve various purposes. There is a small oratory, where the Mikado's envoy performs his devotions. No provision is made for the shelter of the ordinary worshipper. He remains outside in front of the shrine whilst he utters a brief invocation. The joint worship of a congregation of believers is a rare phenomenon in Shinto. Within the precinct there are usually a number of smaller shrines (*massha*) to other deities than the one worshipped in the main building. At Ise there were formerly more than a hundred of these. Sometimes there is an *emadō*, or picture-gallery, for the reception of *ex voto* offerings of this kind. A characteristic feature of Shinto architecture is the *torii*, or honorary gateway, which adorns the approaches to the shrine, sometimes in great numbers. These arches consist of two upright pillars leaning slightly towards one another. Near the top they are connected by a cross-beam or tie. Another beam rests on the upright columns, projecting a little on each side. It is often made to curve upwards slightly at each end. The *torii* is usually constructed of wood painted red, but may also be of stone, bronze, or even occasionally iron. The whole has a simple but graceful effect. Mr S. Tuke has shown that the *torii* is identical with the Indian *turan*, the Chinese *pailou*, and the Korean *hongsalmun*, which are similar in form and purpose. The name is probably Japanese. It means literally 'bird-rest,' *i.e.* hen-roost; and the gateways were so called from their resemblance to this familiar object.

ARCHITECTURE AND ART (of the pagan Slavs).—The pagan Slavs seem to have had only the most rudimentary ideas on the subject of art. The few monuments which are ascribed to them are very crude, and it cannot yet be asserted with absolute certainty that they are the work of Slav artists. There is no connexion between these monuments and the more or less grotesque descriptions given in some of the Chronicles of the Middle Ages. These chronicles we owe to the Germans, Adam of Bremen of the 11th cent. (*Gesta Hammenburgensis ecclesiæ pontificum*), Helmold of the 12th cent. (*Chronicon Slavorum*), Thietmar, Bishop of Merseburg (976–1011), Saxo Grammaticus the Dane (12th cent.) in his *Gesta Danorum*, and the biographers of Bishop Otto of Bamberg (12th century).

The majority of the Slavs seem to have worshipped only idols and in the open air, and to have been quite unacquainted with temples. The existence of temples among the Slavs of the Russian Empire is very questionable. Hilarion, a monk of the 10th cent., writes: 'We are no longer building *kapishta*, but churches of Christ,' from which we may infer that the *kapishta* (from *kap*, 'idol') were pagan temples. But the oldest Russian chronicles speak only of idols, and the word *kapishta* may mean simply idols. Among the Baltic Slavs we find the existence of temples attested by German writings, in which the descriptions are not always very plausible. According to the statements of Helmold, the temple of Svantovit in the Island of Rügen was the great sanctuary of the Baltic Slavs. It was built in the town of Arkona. Saxo Grammaticus gives a glowing description of it. 'It was,' he says, 'a very beautiful wooden temple. The exterior or inclosing wall of the building was ornamented with thin roughly painted sculptures representing various objects. It was entered only by a single door. The temple was surrounded by a double wall. Inside the building stood a huge idol.' He adds that the temple was decorated with purple cloth and wild animals' horns.

According to one of Otto of Bamberg's biographers, the god Triglav had at Stettin four temples called *continæ* (from a Slav word meaning 'building'). The most important of these *continæ* was marvellously decorated and ornamented with sculptures representing men, birds, and animals, so cleverly reproduced that one could have believed them living, and so ingeniously coloured that neither rain nor snow could injure them.

At Gostkov, according to one of Otto of Bamberg's historians, there stood sumptuous temples adorned with colossal idols. In the town of Riedgost (perhaps Rhetra [?]) Thietmar describes a temple built of wood and resting on animals' horns (though the statement seems rather curious). The outside walls were covered with wonderful carved representations of gods and goddesses. In the interior stood gods made by hand, with their names engraved, arrayed in armour and helmets.

It is not our duty to discuss here the question as to the characters in which the gods' names might have been inscribed. This point, upon which much has been written, is probably purely imaginary. 'As many districts as there are in these parts' (*i.e.* among the Baltic Slavs or Slavs of the Elba), says Thietmar, 'so many temples are there, and the images of demons are worshipped by the infidels. It is to the temple that they come

when on the point of making war; to it they bring gifts after a successful expedition.'

Did the Slavs themselves build those temples, which were probably very small? Did they call in foreign architects? We do not know. The Arab geographer Mas'ūdī (10th cent.) had heard of their temples, but he gives an absolutely imaginary description of them, which cannot be believed, and he places the people whom he is describing in districts no less fanciful (*Les prairies d'or*, ch. lxvi.).

We have practically no specimen of the architecture of the pagan Slavs; and no ruined temple is in existence. We know the names of a number of idols worshipped in ancient Russia and among the Baltic Slavs—Svantovit, Perunŭ, Triglav. The present writer has reproduced in his *Mythologie slave* (1901) illustrations of some of the idols which have been discovered in Germany and in Galicia (Austria). They are believed to be of Slav origin; but we are not absolutely sure, as we have no trustworthy information. German and Ancient Russian writings alone bear witness to the existence of these idols. When Christianity reached the Slavs, they adopted the architectural style of the neighbouring races, from whom the gospel had come to them—the Roman style prevailing among the Western Slavs, and the Byzantine among the Slavs of Russia, Bulgaria, and Servia.

LOUIS LEGER.

ARDASHIR I. (Artashīr, Artakhshathr, Artaxerxes).—Ardashir I. (A.D. 226–241), the founder of the Sasanian dynasty, was the son of Pāpāk, 'king' of Khir (Chir), south-east of Persepolis. Having made himself master of Persia and some neighbouring kingdoms, Ardashir killed the Parthian 'king of kings,' Artaban, in 224, and seems to have conquered the capital, Ctesiphon, two years later.

From the beginning Ardashir identified his political aims with the restoration of the Mazdayasnian faith, which, notwithstanding the superficial sway of Hellenism, had never lost its hold on the people. He thus secured a mighty ally—the Zarathushtrian priesthood, the 'race of the Magians'—and continued and accomplished a work already begun by Parthian monarchs. In his zeal for the national religion, he seems to have kept to familiar traditions—his grandfather Sāsān having been attached to the temple of the goddess Anāhita in Istakhr (Persepolis)—as well as to his personal feelings. 'He was devoted to the Magian rites, and he himself celebrated the mysteries' (Agathias, *Hist.* ii. 36). The Avesta texts, destroyed and scattered in the time of Alexander and the following centuries, were collected by Ardashir, and completed by his high priest Tansar (according to a tradition reported in *Dīnkarṭ*, iii.), who thus gave 'a faithful image of the original light.' Another passage, in *Dīnkarṭ*, iv., which corroborates the king's having called Tansar to his capital in order to gather the scattered texts, adds the important fact that canonical authority was attributed only to the collection of Tansar, all doctrines that did not originate from him being considered as heretical. The collection was not completed until the reign of Ardashir's successor Shāhpūhr I. (241–272). A different tradition, reported in the introduction to the Persian translation of *Arṭā Vīrāf Nāmak*, makes Ardashir collect the Avestan texts and the Zend commentaries from the memories of the priests summoned to the capital (Haug and West, *Book of Arda Viraf*, Bombay, 1872, pp. xv–xviii). The custom of reciting a chapter, called *isnād* (*Yasna*), dates, according to Mas'ūdī, from Ardashir's time. Hence we may perhaps conclude with Darmesteter (*Zend-Av.* iii. p. xxxii) that Ardashir and his Hērbad of Hērbads regulated the liturgy. The two chief facts of the restoration, viz. the collection of texts, legends, traditions, laws, and doctrines, and the monopolizing of true worship and of true faith by the king, are expressed in the letter from Tansar to Gushnasp, king of Tabaristān (south of the Caspian), preserved, with additions and alterations, in a Persian translation of an Arabic version of the Pahlavi original (Darmesteter, *op. cit.* xxv–xxx).

The pretended letter of Tansar is discussed in a most thorough way by L. H. Mills ('Tansar's alleged Letter' in *Zoroaster, Philo and Israel*, 21–76), who, in pointing out the peculiar elements of this document, especially a certain ascetic tendency evidently contrasting with the Zarathushtrian law, considers it 'as being in its present form a subtle political fiction.' He goes much further than Darmesteter in eliminating spurious parts and in reducing the remainder, but he expressly recognizes a historical nucleus.

Ardashir has immortalized his political and religious restoration by his theory of the mutual aid of the two powers, the State and the Church, if Mas'ūdī (*Les prairies d'or*, text and tr. by C. Barbier de Meynard and Pavet de Courteille, ii. 162) has correctly rendered his testament to his son Shāhpūhr: 'Religion and kingship are two sisters that cannot exist the one without the other, because religion is the foundation of kingship, and kingship is the protectress of religion.'

N. SÖDERBLOM.

ARHAT (lit. 'fit,' 'worthy').—In its Pāli form, *arahat*, it is met with in the earliest Buddhist texts, and is used there in two senses, according as it is applied to the Buddhist *arahats*, or to those belonging to other communities. In the latter sense, which is exceedingly rare (*Vinaya*, i. 30–32; *Saṁyutta*, ii. 220), it means a man who has attained to the ideal of that particular community, to what was regarded in it as the fit state for a religious man. This sense is not found in pre-Buddhistic literature; but the usage by the early Buddhists makes it almost certain that the term was employed, before Buddhism arose, among the religious communities then being formed in N.E. India. In the more usual, the Buddhist sense, the technical term *arahat* is applied to those who have reached the end of the Eightfold Path, and are enjoying the fruits of it, the *maggaphalaṭṭhā*. They had perfected themselves in each of the eight stages of the Path—right views, aspirations, speech, conduct, mode of livelihood, effort, mindfulness, and rapture (*Saṁyutta*, iv. 51; *Puggala*, 73). They had conquered the three so-called 'intoxications' (*āsavas*) of sensuality, re-births, and ignorance (*Dīgha*, i. 84). In a list of punning derivations in *Majjhima*, i. 280, the *arahat* is said to be one from whom evil dispositions are far (*ārakā*). The first five disciples attained *arahat*-ship on perceiving that there was no sign of a soul in any one of the five groups of bodily and mental qualities constituting a sentient being (*Vinaya*, i. 14). Rāhula, the Buddha's son, claims to be an *arahat* because he has overcome the 'intoxications,' and will incur no re-birth (*Thera Gāthā*, 296; cf. 336). Every *arahat* has the *sambodhi*, the higher insight, divided into seven parts—self-possession, investigation, energy, calm, joy, concentration, and magnanimity.* There is extant in the Canon a collection of hymns, 264 of which are by men, and 73 by women, who had become *arahats* in the time of the Buddha. Fifteen of these claim also to have

* The question of *sambodhi* has been discussed at length in the present writer's *Dialogues of the Buddha*, Oxford, 1899, pp. 190–192.

gained the three *vijjas*, or 'sorts of knowledge': the knowledge of their own and other people's previous births, and of other people's thoughts. Laymen could become *arahats*. A list of twenty who had done so in the time of the Buddha is given in *Aṅguttara*, iii. 451. Every Buddha was an *arahat*. The word occurs in the standing description applied to each of the seven Buddhas known in the earliest documents (*Dīgha*, ii. 2). The *Jātaka* commentator says that the Buddha made *arahat*-ship the climax of his discourse (*Jātaka*, i. 114, 275, 393, 401). That is so far the case that either *arahat*-ship, under one or other of its numerous epithets, or the details of the mental and moral qualities and experiences associated with it, forms the climax of the great majority of the Dialogues. Thus the first Dialogue in the *Dīgha* deals with the first stage in the Path. The second is started with the question, by a layman, as to what is the use of the religious life. After a lengthy enumeration of various advantages, each nearer than the previous one to *arahat*-ship, the discussion of the question ends with *arahat*-ship. The third is on social rank, and ends with the conclusion that *arahat*-ship is the best. In the fourth the climax is that the *arahat* is the true Brāhman. The fifth discusses the question of sacrifice, with the result that *arahat*-ship is the best sacrifice. The sixth is on the aim of the members of the Buddhist Order, and ends with *arahat*-ship; and so on through the remaining seven Dialogues in that volume. Ten out of thirteen chapters, if we may so call them, lead up to this subject, the other three being concerned with it only incidentally. The proportion in the rest of the *Dīgha* is less, in the *Majjhima* it is probably about the same.

The last discourse of the Buddha to his disciples is summarized in *Dīgha*, ii. 120, as follows:—

'Brethren, ye to whom the truths I have perceived have been made known by me, when you have made yourselves masters of them, practise them, think them over, spread them abroad in order that pure religion may last long for the good and happiness of the great multitudes. . . . Which are these truths? They are these: the four modes of mindfulness, the fourfold struggle against evil, the four footsteps to majesty, the five moral powers, the five organs of spiritual sense, the seven kinds of insight, the noble eightfold path. These are they.'

In *Vinaya*, ii. 240, these seven groups are called the jewels of the *Dhamma-vinaya*, the doctrine and discipline, in whose ocean the *arahats* dwell. The total of the numbers in the seven groups amounts to thirty-seven. These are identified in the commentaries with the *Sambodha-pakkhiyā dhammā*, the qualities which are the 'sides,' that is, constituent parts, of the insight of *arahat*-ship. These are mentioned already in the canonical books (*Aṅguttara*, iii. 70, 71, iv. 351; *Saṁyutta*, v. 227, 239). But it would seem from the discussions on the use of this term by E. Hardy in his Introduction to the *Netti* (p. xxx ff.), and by Mrs. Rhys Davids in her Introduction to the *Vibhaṅga* (p. xiv ff.), that the commentators' interpretation of its meaning is later, and that it originally referred simply to the *sambodhi*, the seven divisions of which, already given above, form only the seventh division of the thirty-seven qualities. The term is so used in the *Vibhaṅga*, p. 249.

It would follow from this that in the later Pāli writers the conception of *arahat* was extended to include all the thirty-seven of these characteristics. So also the *Milinda* distinctly adds to the conception of *arahat*-ship the possession of the four *Paṭisambhidās*.*

As the meaning of the term was extended, so the reverence for the *arahat* increased. In the old texts we are informed of a custom by which, when a *bhikkhu* thought he had attained, he could 'announce his knowledge,' as the phrase ran. The 112th Dialogue in the *Majjhima* gives the six questions which should then be put to the new aspirant. If he answered these correctly, his claim should be admitted. By the time of the commentators this was obsolete. They speak of no *arahats* in their own day; and we hear of none mentioned, in any source, as having lived later than the 3rd cent. of our era. The associations with the word became so high that only the heroes of old were esteemed capable of having attained to it.

The Sanskrit form *arhat* has had a precisely contrary history. First used some centuries after the rise of Buddhism by those Buddhists who then began to write in Sanskrit, its use was confined to those who tended more and more to put the conception of *bodhisattva* in place of that of *arahat*, as the ideal to be aimed at. In the literature of this period *arahat*-ship has ceased to be the climax; it is not even the subject of the discourses put into the mouth of the Buddha. Neither in the *Lalita Vistara* nor in the *Mahāvastu* can the present writer trace the word at all, except when used as an epithet of the Buddha, or of the early disciples. In the *Divyāvadāna* (a collection of stories of different dates, put together probably some time after the Christian era), whenever the legend refers to personages who lived in the Buddha's time (pp. 404, 464) the term *arhat* is used very much in the old sense. So also in the story of Vītāśoka, the brother of Aśoka, we find at pp. 423 f. and 428 f. the term used in a manner that shows it was familiar to those who recorded this particular legend, in the sense of one who had reached emancipation in this life. It is used incidentally, in the midst of the narrative; and throughout the volume attention is directed to the edifying legend rather than to the discussion of this or any other point in Buddhist ethics. The word had survived; the interest in the doctrine had waned.

In the *Saddharma-puṇḍarīka* ('Lotus of the True Law'), *arhat* is used a score of times of a Buddha, and is, in fact, a standing epithet of each of the numerous Buddhas invented in that work. It is also used as an epithet of the early disciples, but with distinct depreciation. Thus at p. 43 of Kern's translation * *arhats* are called conceited if they do not accept the new doctrine. At p. 189 the stage of *arhat* is declared to be a lower stage. At p. 330 ff. the merit of one who hears a single word of the new doctrine is said to be greater than that of one who leads a vast number of men to become *arhats*. There is a similar argument beginning on p. 387. We find, then, in these works that *arhat*-ship is first passed over, or put on one side, and finally is openly attacked.

24. Concluding remarks.

The promulgation of the heresy of Arius, which followed the close of the contest between the Christian Church and the Roman Government by only a few years, may justly be regarded as the culmination of all the various controversies in the early Church concerning the relation of the 'Persons' of the Holy Trinity to one another.

1. The Christian consciousness recognized from the first the supreme necessity of maintaining the absolute Unity of God. According to one of the earliest apologists, Aristides, the worship of the Christians was more purely monotheistic even than that of the Jews (*Apol.* xiv., xv.). But, whilst acknowledging Unity to be the essential of Divinity, Christians of every description perceived the momentous consequences of the Incarnation. Whether Judaic, Pauline, or Gnostic, all who professed to follow Christ saw in Him the one means by which God the Father had been made known to man. 'Thus the Lord's divinity was from the first as fixed an axiom of Christianity as the unity of God' (Gwatkin, *Studies of Arianism*[2], 1900, p. 5). The earliest controversies about our Lord bore on the question of the reality of His sufferings and His humanity; and it was not till the old Docetic heresies had become comparatively insignificant that the nature of the Divinity of the Son and His relation to the Father occupied an important place in Christian speculation.

By the close of the 2nd cent. the conditions under which a theological question could be debated were practically the same as those which have prevailed down to the dawn of modern criticism. It was no longer a question of rival Scriptures, the majority of the books of the NT being already acknowledged as authoritative; the orthodox tradition of the Church had practically prevailed over all opposition; the question as to the recognition of the OT by the Church had been decided. There were already definite methods of exposition, and collections of Scripture proofs for use in controversy with Jews and pagans had been formed from a very early date. None of the facts of the Gospel story was disputed; Christian philosophy identified Jesus Christ with the Divine Logos; faith acknowledged His pre-existence, His miracles, His Resurrection and His Ascension as unquestionable facts. No doubts were raised as to the authorship or authority of those passages in the OT and NT which were accepted as the basis of the Christology of the age. The utterances of the Prophets, the words of David and Solomon in Psalm and Proverb, the doctrine of St. Paul and St. John, were all admitted to be the source and basis of Christian doctrine. It is of great importance to bear in mind the fact that the premises from which orthodox and heretic alike drew their conclusions in the 3rd and 4th centuries were different from what would now be accepted; and it is not always by the arguments used in this controversy that we must form our judgment in regard to the decision finally reached.

The problem was, of course, the reconciliation of the two apparently conflicting beliefs in the Unity of the Godhead and in the real distinction of Personality in the Trinity. The controversy naturally turned first on the meaning of the characteristic Christian doctrine of the Divinity of Jesus Christ. In attempting to maintain the Unity of the Godhead, the Christian teacher ran the risk of sacrificing either the Personality or the Divinity of our Lord. On the one hand, Praxeas, Sabellius, and their followers represented the appearance of our Lord as hardly more than a temporary means whereby God had been dramatically manifested to the world, making the Trinity an economy by which the Divine is revealed in different aspects. But the Christian conscience could not thus allow a personality of the Divine Master without real permanence. 'It is clearly impossible, on any Christian theory of the world and of the Divine economy, that God should exist even for a moment only in a single mode, or that the Incarnation should be only a temporary and transient manifestation' (Bethune-Baker, *Christian Doctrine*, 1903, p. 106). Equally impossible was it for the Church to assent to a practical reversion to the old Ebionite doctrine that Jesus was simply an ordinary human being deified by reason of His eminent virtue. Theodotus, Paul of Samosata, and others who held this view were not unnaturally ranked among the heretics. But the question was too difficult to be settled by the rejection of these alternatives, and it was further complicated by misunderstandings as to the significance of the terms employed to expound the mystery of the Trinity, as the correspondence between Dionysius of Rome and his namesake Dionysius of Alexandria abundantly testifies (Feltoe, *Letters and other remains of Dionysius of Alexandria*, 1904). These interesting letters reveal two opposite tendencies—that of the West, which so emphasized the eternal unity as to obscure the distinction of the Persons in the Trinity, and the teaching of the Easterns, who, under the influence of Origen, insisted on the theory that subordination explained the existence of the threefold Personality. Dread of the Sabellian Christology was especially potent in influencing the course of theological speculation throughout the East.

At the beginning of the 4th cent. the most famous Christian scholar was Lucian, who, after the deposition of Paul of Samosata, founded a theological academy at Antioch. He seems to have been looked upon at least with suspicion by three successive bishops—Domnus, Timæus, and Cyril; but his exemplary conduct, ascetic practices, and, above all, the fact that he was one of the last martyrs in the Diocletian persecution, caused him to be regarded with particular reverence by his disciples, who felt especially bound to one another by the memory of their common master. The school of Lucian numbered among its adherents the bishops Eusebius of Nicomedia, Menophantus of Ephesus, Theognis of Nicæa, Maris of Chalcedon, Leontius of Antioch, and Athanasius of Anazarbus, the sophist Asterius, and the presbyter Arius (Harnack, *Hist. of Dogma*, vol. iv. p. 3, Eng. tr.).

It is a matter of considerable doubt whether Arianism is to be traced to Antioch or to Alexandria, and also how far it is due to the teaching of Origen. Newman is of opinion that Arianism is the outcome of the grammatical literalism of Antioch as opposed to the more spiritual method of interpreting Scripture current in Alexandria (*Arians*, ch. i. sec. i.). Professor Gwatkin, on the other hand, points out (*Studies of Arianism*[2], p. 19) that though Antioch was undoubtedly Arian in the later days of the controversy, when Alexandria, owing to the influence of Athanasius, had become orthodox, it was not so at the beginning. The language of Arianism was borrowed from Origen, and especially from Dionysius, who speaks of the Second Person as ποίημα τοῦ θεοῦ, ξένον κατ' οὐσίαν, and says οὐκ ἦν πρὶν γένηται—phrases which were adopted into the terminology of Arianism. Arius, moreover, had a very strong party in Alexandria when he promulgated his heresy. Harnack (*op. cit.* vol. iv. p. 3) considers that Lucian continued the work of Paul of Samosata at Antioch, and gives credit to the statement of Alexander (Theodoret, i. 4), which Gwatkin rejects, that Lucian remained a long time outside the Church of Antioch. Lucian is called 'the Arius before Arius.' The high honour, however, in which his memory was held, as the Synod of Antioch in A.D. 341 testified by accepting one of its confessions of faith as 'the creed of Lucian the martyr' (Sozomen, iii. 5), makes it difficult to believe that he was ever considered as a teacher of heresy. The question of Origen's responsibility for Arianism is an extremely vexed one, and is admirably discussed by Bishop Robertson (*Prolegomena to Athanasius*, p. xxv f.). As Athanasius showed in his *de Sententia Dionysii*, the language of two theologians may be almost identical, whilst the spirit in which they employ it is quite different.

2. The years A.D. 318 and 319 found the Church of Alexandria in great confusion, distracted by the obscure Meletian schism and by a controversy between the bishop Alexander and the presbyter Arius (Ἄρειος) of the district of Baucalis. Alexander, in a charge to his clergy, impressed upon them the unity in the Trinity of the Godhead. According to the historian Socrates (i. 5), Alexander in this discourse somewhat exceeded the limits of discretion (φιλοτιμότερον . . . ἐθεολόγει) in insisting on what is, after all, a single aspect of the truth in the mystery of the Trinity. Arius forthwith accused his bishop of teaching Sabellianism, and proceeded to formulate his own scheme of doctrine.

Alexander's doctrine is summed up in the following words in the letter of Arius to Eusebius of Nicomedia: Ἀεὶ θεός, ἀεὶ υἱός, ἅμα πατὴρ ἅμα υἱός, συνυπάρχει ὁ υἱὸς ἀγεννήτως τῷ θεῷ, ἀειγενής, ἀγεννητογενής, οὔτ ἐπινοίᾳ οὔτ' ἀτόμῳ τινὶ προάγει ὁ θεὸς τοῦ υἱοῦ, ἀεὶ θεός, ἀεὶ υἱός, ἐξ αὐτοῦ τοῦ θεοῦ ὁ υἱός (Arius' letter to Eusebius *ap.* Theodoret, *HE* i. 4). Arius, considering that this definition detracted from the unique majesty of the Father and introduced confusion, maintained the complete distinction between the Father and the Son, and the subordination of the latter. Harnack (*op. cit.* vol. iv. p. 15) enumerates eight points of the view advanced by Arius—

(1) The characteristic of the One and Only God is solitude and eternity. He can put nothing forth from His own essence. He was not always Father, but only after He begat (*i.e.* created) the Son.

(2) Wisdom and the Word (λόγος) dwell within this God, but they are powers, not persons.

(3) To create the universe, God brought into being an independent substance (οὐσία or ὑπόστασις) as the instrument by which all things were created. This Being is termed, in Scripture, Wisdom, Son, Image, Word, etc.

(4) As regards His substance, the Son is a separate being from the Father, different from Him in substance and nature. Like all rational creatures, the Son is endowed with free will, and consequently capable of change.

(5) The Son is not truly God, but is only the so-called Word and Wisdom. He has no absolute, but only a relative, knowledge of the Father.

(6) The Son is not, however, a creature like other creatures. He is the perfect creature (κτίσμα τέλειον), and has become God, so that we may term Him 'the only-begotten God,' etc.

(7) Christ took a real body, but it was a σῶμα ἄψυχον, the Logos taking the place of the soul. From the Gospel record we see that this Logos is not an absolutely perfect being, but is capable of suffering.

(8) Amongst other created beings the Holy Ghost is to be placed beside the Son as a second, independent substance. According to Arius, apparently, the Spirit is the creation of the Son.

Such, then, was Arianism—a theory of the mutual relations of the Persons in the Trinity based nominally on the words of Scripture, but arrived at really by the methods of the heathen philosophers. It led either to polytheism by allowing the existence of the Logos as a secondary God, or to Judaic Unitarianism by denying His proper Divinity.

The Arian system never really commended itself to the general conscience of Christians, and, as was usually the case in the early days of Christianity, the heresy found its support among the clergy, whilst the less instructed laity remained orthodox. Its tendencies were essentially pagan. As Harnack points out, Arianism was a new doctrine in the Church, and was really Hellenism tempered by the constant use of Holy Scripture (*op. cit.* iv. p. 41). From a very early time the conception of the God of the OT and the Heavenly Father of the NT had tended to give ground before the Hellenic idea of an abstract unknowable Deity. Clement of Alexandria had paved the way for Arianism by his doctrine of God: 'Stripping from concrete existence all physical attributes, taking away from it in the next place the three dimensions of space, we arrive at the conception of a point having position.' 'There is yet a further step,' says Bigg, 'for perfect simplicity has not yet been gained. Reject the idea of position, and we have reached the last attainable abstraction, the pure Monad.' This, as he observes, is essentially a heathen conception, and can be developed consistently only on heathen principles. Clement has gone astray from the first by his mode of approaching the subject. He has propounded as his question, not What is Spirit? or What is Good? but What is the simplest thing conceivable? This he assumes to be the cause of all that exists. Nothing that is part of the effect can belong to the cause. . . . The result is a chimera, a cause divided by an impassable gulf from all its effects (*Christian Platonists of Alexandria*, pp. 63–65). This is really the Arian conception of the Father, the unknown and unknowable Cause, of whom the Son is a creature as incapable of knowing or revealing Him as any other creature. Arius deliberately severs all possible connexion between the created and the uncreated, the human and the Divine. Christ is no mediator, no saviour. As Dr. Harnack forcibly remarks (*op. cit.* iv. p. 42), Arius and his friends are nowhere in their theology concerned with communion with God. Rightly, therefore, does Schultz (*Gottheit Christi*, p. 65) say that 'the Arian Christology is inwardly the most unstable, and dogmatically the most worthless, of all the Christologies to be met with in the history of dogma.' But if unsatisfactory in its conclusions, and leading to the ultimate subversion of Christianity, Arianism was most difficult to refute, owing to the confusion of thought prevalent at the time of its appearance.

In the controversy which ensued, Alexander seems to have acted with some moderation, and even to have allowed his hesitation to proceed to such extremes as to be made an excuse for a schism. Arius had no scruples in forming a party of his own. He enlisted the support of two bishops, Secundus of Ptolemais in the Pentapolis, and Theonas of Marmarica, and also that of several presbyters and virgins. To secure popular favour, he put his opinions into doggerel verse, adopting the metre of the licentious poet Sotades, in order that the sailors and dock-labourers of Alexandria might sing at their work of 'How the Father was not always Father,' etc. His *Thalia*, as this strange collection of songs was called, popularized his system among the formidable proletariat of the capital of Egypt. But Arius' strongest support was his 'fellow-Lucianist,' Eusebius of Nicomedia, the most influential prelate in the East. In A.D. 321, Alexander held a Council at Alexandria; Arius was excommunicated and left the city (see the *Depositio Arii*, included in the Benedictine Edition of *Athanasius*, and claimed as his by Newman. It is translated in the *Nicene and post Nicene Fathers*, 'Athanasius').

3. Two years later, Constantine defeated Licinius (A.D. 323) and became sole master of the Roman world. Affairs in Alexandria had become very serious, and indeed the whole Eastern Church was in the utmost confusion. The question as to the keeping of Easter distracted the Christians as a matter of practice as seriously as Arianism was doing as one of doctrine. Accordingly the Emperor sent his episcopal adviser Hosius, bishop of Cordova in Spain, to Alexandria with a very remarkable letter to Alexander and Arius, begging them to lay aside their logomachies and co-operate with him in restoring peace to the distracted world. But an Imperial letter, 'though marvellous and full of wisdom,' as Socrates describes it, could not allay so embittered a strife, and Constantine decided to submit all matters in dispute to a Council of the whole Church, to assemble in the year A.D. 325 at Nicæa, on Lake Ascanius, in the north of Asia Minor. The first act of the Council as regards Arius was with practical unanimity to pronounce his doctrine heretical. That the Son had been created out of things that were not (ἐξ οὐκ ὄντων), that He was of another essence than the Father, that, even before time was, the Father was without the Logos, were on all sides regarded as blasphemous assertions. It was not till the question arose as to how the error should be refuted that there

was any serious difference of opinion. The Fathers had met to affirm the ancient faith of the Church against novelty; but when they wished to express what they meant in words, they found that none to which they had been hitherto accustomed were capable of escaping the evasions of such masters as the Arians in the art of making Scripture phrases assume a meaning contrary to the teaching of Scripture. In consequence of this, the Council, probably at the suggestion of Hosius, was induced to adopt the expression ἐκ τῆς οὐσίας τοῦ Πατρός and the word ὁμοούσιος, neither of which is to be found in the Bible.

ὁμοούσιος (*ejusdem substantiæ*) was a word which presented no difficulty to the Latins who followed the teaching of Tertullian, *adv. Praxeam*, and Novatian, *de Trinitate*. Dionysius of Rome in his correspondence with his namesake of Alexandria had protested against any undue separation (μεμερισμέναι ὑποστάσεις) of the Father and the Son, thus virtually insisting on the ὁμοούσιον. Tertullian had also, in his *de Anima* (c. 32), carefully distinguished *substantia* (οὐσία) from *natura*. The Latins and the anti-Origenists at the Council desired to press the unity rather than the equality of the Son with the Father; and to them the word was eminently acceptable. But the majority of the Greek-speaking bishops had a strong objection to both expressions, ἐκ τῆς οὐσίας and ὁμοούσιος, on the following grounds: (1) They had no Scripture warranty. (2) The Council against Paul of Samosata (A.D. 269) had condemned the use of ὁμοούσιος. (3) The idea of an οὐσία common to the Trinity might countenance Sabellianism. (4) The words might either imply an οὐσία prior to the Father and the Son, or countenance materialism (οὐσία being conceived as an equivalent to εἶδος or ὕλη) (Bethune-Baker, *Christian Doctrine*, p. 171 n.).

On this rock the Council nearly split; and Eusebius of Cæsarea, the trusted adviser of the Emperor, and by far the most learned man of his age, was especially mistrustful. Ultimately, however, Eusebius and the Origenist party accepted a creed containing the expressions in dispute, and Arianism was explicitly condemned.

Eusebius first offered the Council the baptismal creed of his own Church, perhaps a little amplified. In this the Lord Jesus Christ was declared to be the λόγος and God from God (θεὸς ἐκ θεοῦ), and also firstborn of all creation (πρωτότοκος πάσης κτίσεως, Col 1[15]) and only-begotten Son (υἱὸς μονογενής). Constantine himself, prompted no doubt by Hosius, suggested the ὁμοούσιον. The creed differs from our 'Nicene Creed' in its definition of the doctrine of the Son in several important points (see Hort, *Two Dissertations*, p. 61; Bethune-Baker, *Chr. Doct.* p. 168). After a bare profession of belief in the Holy Spirit, the creed concludes with anathemas of all the distinctive teachings of Arianism, (1) that there was a time when the Son was not, (2) that He was not before He was begotten, (3) that He came into being out of nothing, (4) that He is of a different essence (ὑπόστασις) or being (οὐσία) from the Father, or (5) that He is created or capable of change or alteration. It is generally agreed that at Nicæa οὐσία and ὑπόστασις, which afterwards were carefully distinguished, were practically synonymous.

4. Into the intrigues which culminated with the banishment of Athanasius, who became bishop of Alexandria on 8th June, 328, it is needless to enter, it being sufficient for us to inquire into the causes which prevented the Creed of Nicæa from being the immediate conclusion of the controversy. Few of the bishops, whilst abhorring the heresy of Arius, understood the exact merits of the question. They feared the error of Sabellius, and to this the *Homoousion* seemed to have committed them. Moreover, with the natural conservatism of men pledged to hold fast to the faith 'once delivered to the saints,' they distrusted words unsupported either by Scripture or by tradition. The Emperor himself, who to the end of his life believed himself faithful to the Creed of Nicæa, when he saw that its promulgation had failed to give peace to the Church, was less enthusiastic in its favour, and showed so much readiness to welcome back its opponents that he received Eusebius of Nicomedia not long after the Council; and, but for the sudden death of the heresiarch, Arius would, at his command, have been reconciled to the Church.

How new the phrases introduced into the Creed were as formulæ of belief is shown by Athanasius' defence of them in his *de Decretis* (sec. 25 ff.). He refers to similar language of Theognostus, Dionysius of Rome, and Dionysius of Alexandria. 'This anxious appeal to theological writers,' says Hort (*Two Dissertations*, p. 55), 'sets in strong relief the absence of authority derived from public creeds.' Eusebius's objections and his reasons for ultimately accepting the word ὁμοούσιος are set forth in his letter to his Church at Cæsarea. In this letter he discusses three expressions in the Creed, ἐκ τῆς οὐσίας τοῦ πατρός, γεννηθέντα οὐ ποιηθέντα, and ὁμοούσιος. He accepted the first on being assured that it meant that the Son was of the Father, but was not a part of Him. 'Begotten, not made,' passed, because 'made' was an appellative common to the other creatures which came to be through the Son, though the Son bore no likeness to them. As for ὁμοούσιος, Eusebius received it as implying 'that the Son bears no resemblance to the originated creatures, but that to His Father alone who begat Him He is in every way assimilated.' It is easy enough to see that Eusebius did not assent to the definitions of the Creed *sx animo*; and he is still more ready to explain away the anathemas. The letter is preserved in Athanasius, *de Decretis*, as an appendix, secs. 9, 10, being omitted by Socrates, *HE* i. 8.

5. On the death of Constantine (A.D. 337), his Eastern dominions passed to his son Constantius, who encouraged his bishops to draw up a creed to supersede that of Nicæa, to which all the Asiatic and Syrian Churches seemed opposed. The result of their labours is apparent in the five creeds of Antioch, which exhibit the tendencies of the different factions, whose only point of union seems to have been antagonism to Athanasius and the Nicene formula. These confessions of faith, together with the creeds drawn up at Sirmium and elsewhere, served only to show that there was no possible compromise between avowed Arianism and the *Homoousian* doctrine. The orthodox opponents of the language of the Creed of Nicæa, whom Professor Gwatkin terms 'the Conservatives'—men like Eusebius of Cæsarea, whom dread of Sabellianism and hatred of innovation drove into opposition to Athanasius—were being made use of by those who were at heart Arians to force an Arianizing creed upon the unwilling Church. The weak and unstable Constantius was always in the hands of those whom he believed capable of pacifying the Church by a new creed. He was in reality aiming at a comprehensive State-religion acceptable to all parties, and thought that a sort of modified Arianism would supply this want in the provinces over which he at this time bore rule. In A.D. 339, Athanasius was driven out of Alexandria, and in A.D. 341 the formal reaction against the Nicene doctrine began with the famous council assembled for the dedication of the Golden Church at Antioch.

Athanasius and Marcellus of Ancyra went to Rome to lay their cause before Julius, to whom the bishops assembled at Antioch wrote in A.D. 339. The Pope's answer is described by Professor Gwatkin (*Arianism*[2], p. 117) as 'one of the ablest documents of the entire controversy' (Athanasius, *Apol. contra Ar.* secs. 21–35; Socr. *HE* ii. 17; Soz. iii. 10).

In all probability, Dianius, bishop of Cæsarea in Cappadocia, presided at this synod, and there were also present Eusebius of Nicomedia, now bishop of Constantinople, who gave the name by which the opponents of Athanasius were at this time known, and Acacius, the successor of Eusebius Pamphilus in the see of Cæsarea.

The opponents of Athanasius were called οἱ περὶ Εὐσέβιον, or the *Eusebians*, as the words have been somewhat inexactly rendered. The term is used in two senses: (1) literally denoting the personal entourage of Eusebius, *i.e.* the court party, crypto-Arians all of them; (2) more generally the majority of the Asiatic bishops who were discontented with the Nicene Council. These latter ultimately became the Semi-Arian party.

Four creeds were put forward by this Council—all attempts to dispense with the objectionable word ὁμοούσιον. The most celebrated was the so-called second Creed of Antioch, to which the name of Lucian the martyr was attached. In this the Persons of the Trinity were said to be One by reason of the harmony existing between them—τῇ μὲν ὑποστάσει τρία, τῇ δὲ συμφωνίᾳ ἕν.

The honour in which the Council of Antioch was held in after days—St. Hilary of Poitiers speaks of it with great respect (*de Syn.* c. 32), and the canons were quoted by the popes themselves as authoritative (see Hefele, *Councils*, sec. 56)—is sufficient proof that the Church did not regard the bishops there as heretics. Yet they undoubtedly, by their endeavours to find some more acceptable substitute for the creed of Nicæa, played into the hands of the Arian party. The four creeds of Antioch were: (1) The first creed, which begins with a repudiation of

Arius: 'We have never become followers of Arius, for how shall we who are bishops follow a presbyter?' This creed was suspiciously like the confession which Arius himself had made before his restoration was ordered by Constantine. (2) The second creed, which became the watchword of the anti-Athanasian party. It declared the Son to be the unchangeable image (*ἀπαράλλακτον εἰκόνα*) of the Godhead, essence (*οὐσία*), counsel, power, and glory of the Father. It laid special stress on the reality of the Fatherhood and Sonship and on the office of the Holy Spirit—*τῶν ὀνομάτων οὐδὲ ἁπλῶς οὐδὲ ἀργῶς κειμένων ἀλλὰ σημαινόντων ἀκριβῶς τὴν οἰκείαν ἑκάστου τῶν ὀνομαζομένων ὑπόστασιν καὶ τάξιν καὶ δόξαν*. The anathemas were worded in such a way that an Arian could easily subscribe them. (3) A profession of faith by Theophronius of Tyana. At the conclusion the doctrines of Marcellus of Ancyra, as representing the Sabellianizing tendency of the Nicenes, as well as those of Sabellius and Paul of Samosata, are anathematized. (4) A decidedly Arian creed drawn up a few months later than the actual Council by certain bishops who met *δήθεν περὶ πίστεως*, as Athanasius bitterly remarks (*de Synodis*, sec. 25). These creeds are to be found in Athanasius' *de Syn.* secs. 22–25. See Hahn, *Bibliothek der Symbole*, pp. 153–156.

By A.D. 341 the parties at strife can be described almost in geographical terms. The Western Church, under the guidance of Rome, had ranged itself under the banner of Nicæa, whilst the Orientals rallied to the cry of 'No un-Scriptural terms in the Creed.' The leaders of the Arians, too prudent to show their hand openly, were content to allow the 'conservative' opponents of Athanasius to prepare the ground for them. As long as Athanasius was in exile, the Nicene theology had no foothold in the East. Circumstances, however, were preparing for a temporary triumph of the Athanasian party. After his death and the massacre of the collateral members of his family, Constantine's dominions were divided between his three sons—Constantine II. at Trèves, Constans in Italy, and Constantius in the East. The two former supported Athanasius.

6. When Constantine II. was killed in A.D. 340, his dominions seem to have passed under the sway of Constans, who was thus ruler over the greater part of the Roman world. As he supported Athanasius, Julius, and the party of the Nicene council, the *ὁμοούσιον* was upheld by the more powerful of the two remaining Emperors. The result of this state of affairs was that Constans, the patron of Athanasius, was able to insist in A.D. 343 on a joint meeting of the Eastern and Western bishops to re-try the case. The place selected was Sardica, the modern Sophia in Bulgaria, near the frontier of the dominions of Constans and Constantius; but when the bishops arrived, it was evident that no mutual understanding was possible. The Westerns insisted upon Athanasius and Marcellus of Ancyra taking their seats in the Council, and confirmed the Creed of Nicæa. The Orientals withdrew to Philippopolis, where they subscribed the Arianizing fourth creed of Antioch, and specially condemned Marcellus of Ancyra. Envoys were sent from Constans to his brother at Antioch, and a truly diabolical plot was hatched by Stephen the bishop to discredit them. The Eastern bishops had enough sense of rectitude to depose Stephen at a Council held at Antioch in A.D. 344, where a creed was drawn up called from its prolixity the Macrostich (*μακρόστιχος ἔκθεσις*), or fifth creed of Antioch. In it Marcellus and his disciple Photinus were expressly condemned. Constantius now seemed disgusted with the failure of the anti-Nicene party, and in the autumn of 346 Athanasius was allowed to return to Alexandria.

The Council of Sardica revealed the fundamental difference between the Western and Eastern Churches at this time. It is noticeable that up to this time the Eusebians had not directly attacked the Creed of Nicæa or even the doctrine of Athanasius (Harnack, *op. cit.* iv. 64), the accusations against the bishop being purely personal. The object of the Eusebians was to get the *Homoousion* set aside and to substitute a less controversial creed for that of Nicæa, and also to attack Athanasius through his friend Marcellus of Ancyra (Harnack, p. 67; see also Zahn's *Marcellus von Ancyra* and Eusebius of Cæsarea's two books against him). Hosius took the lead at Sardica, and, according to Athanasius (*ad Antiochenos*, 5), a fruitless attempt was made to supplement the Creed of Nicæa. A creed, however, was drawn up by Hoslus and Protogenes of Sardica, which, though it did not emanate from the Council (Hefele, § 63), expressed the theological teaching of the West. It is found in Theodoret, ii. 8, and a Latin translation has been discovered. It declares there is but one substance in the Trinity (*μίαν ὑπόστασιν* [Lat. *substantiam*], *ἣν αὐτοὶ οἱ αἱρετικοὶ οὐσίαν προσαγορεύουσιν*), and its doctrine of the Son is such that we can well understand how the Westerns refused to condemn Marcellus (Harnack, *op. cit.* iv. 60). Athanasius, when he was asked his views on the orthodoxy of Marcellus by St. Epiphanius, would only smile, showing that he had an equally poor opinion of his friend as a theologian and of his inquirer as a man of sense (Epiph. 72. 11). The tendencies of the West inclined to Sabellianism, and those of the East to Arianism, and before orthodoxy could be satisfied each had to be checked. The infamous plot of Stephen of Antioch against the two Western delegates Vincentius of Capua and Euphrates of Cologne is related by Athanasius (*Hist. Arian.* c. 20).

7. During the next ten years (A.D. 346–356) the two parties were outwardly at peace, but yet busily arming for the conflict. At Alexandria, Athanasius, who had been welcomed back with surprising enthusiasm, maintained his influence undiminished, and set a seal upon the loyalty of his church to the Creed of Nicæa. The monastic movement was in all the vigour of its first enthusiasm, and the ascetics, recognizing the earnestness of the bishop, became his firmest supporters. At Antioch, Leontius, whose early indiscretion was similar to that of Origen (*Hist. Arian.* 28), though an Arian at heart, had managed to maintain the peace by his cautious policy. This wise old prelate, however, knew well that the tranquillity his discretion had secured was only temporary, and in allusion to his death he would pathetically touch his grey hairs and say: 'When this snow melts, there will be much mud.' At Rome, Photinus of Sirmium, whose indiscretion outran even that of Marcellus, had been sacrificed for his Sabellian teaching; but the death of the wise and politic pope Julius in A.D. 352 was a serious loss to the cause of orthodoxy. His successor Liberius lacked both his firmness and his wisdom. Political events were also precipitating the crisis. Athanasius' faithful friend, the Emperor Constans, was killed by the usurper Magnentius. From the end of A.D. 350, when he was at or near Sardica on Dec. 25, to the close of A.D. 359, Constantius spent his time in his Western dominions, being most frequently to be found at Sirmium or Milan (Gwatkin, *Studies of Arianism*[2], App. ii. 'Movements of the Eastern Emperors'). Sirmium, not Antioch, was destined henceforward to be the scene of creed-making.

8. Many of the original disputants in the controversy had already passed away, and a new generation had arisen. Parties were becoming more and more defined. As their system was developed, stern logic forced the Arians to become more Arian than their founder. Some of the old conservatives were drifting towards Arianism, whilst others shrank back in dismay at its encroachments. The general tendency favoured the obliteration of the old party landmarks and the rise of new factions. The place of Eusebius of Nicomedia as Imperial adviser had been taken by Valens, bishop of Mursa in Pannonia, the province bordering on Illyricum, to which Arius had been exiled after the Council of Nicæa. Valens, with his friend Ursacius, bishop of Singidunum, was a most uncompromising Arian, and his policy was not, like the old Eusebians, to fight Athanasius by means of conservative prejudice, but to force an Arian creed on the Church in place of that of Nicæa (Robertson, *Athanasius*, p. liv). Valens had won great influence over Constantius, who believed that the bishop had received from an angel the news of the victory of Mursa (A.D. 351), and from this time an organized campaign was conducted against Athanasius, which culminated in the *coup d'état* at Alexandria, when the bishop was expelled by military violence (A.D. 356). Valens' ablest assistants in the East were Acacius,

the successor of Eusebius Pamphilus in the see of Cæsarea, and Eudoxius, bishop of Antioch and Constantinople successively. In A.D. 357 there appeared from Sirmium the first really Arian creed, called by Hilary of Poitiers 'the blasphemy of Sirmium.' Other formulæ of belief were promulgated from the same place, notably the 'dated creed' in which the consuls of the year are mentioned, a fact of which Athanasius is not slow to take advantage in his *de Synodis*. The Arians, supported by the Emperor, did not hesitate to push their claims; and finally, at the great assemblies of Westerns at Ariminum and Orientals at Seleucia, an Arian creed was accepted as the official doctrine of the Empire. Thus in A.D. 359 it seemed as though the Nicene profession of faith was repealed and Arianism was triumphant.

The creeds of Sirmium are as follows. The 1st was drawn up against Photinus in A.D. 347. The 2nd (A.D. 351)—but commonly known as the 1st—is identical with the fourth creed of Antioch (ὅθεν περὶ πίστεως). The 3rd (A.D. 357), called the 'blasphemy,' (*a*) distinctly denies the true Divinity of the Son; (*b*) forbids the use of the terms οὐσία, ὁμοούσιον, ὁμοιούσιον as un-Scriptural, maintaining that it is impossible to declare the Nativity of the Son, because it is written *generationem eius quis enarrabit*; (*c*) in opposition to the teaching of the creed proposed but not accepted at Sardica (see above), makes the Divine nature of the Son as contrasted with that of the Father passible (see Bethune-Baker, *Introd.* p. 181 n.). This extreme teaching startled the bishops of Asia Minor, and under the presidency of Basil of Ancyra a synod was held at that place in A.D. 358. At this synod the extreme Arians, Eudoxius, Aëtius, and others, were excommunicated with anathemas condemning all who will not acknowledge the complete likeness (ὁμοιότης) of the Son to the Father, as well as the terms ὁμοούσιον and ταὐτοούσιον (Anathema xix. [Hahn, p. 201]). The result of the stand made by Basil and his friends was an attempt to compromise, *i.e.* to allow that the Son was *like* the Father. The 4th, or 'dated creed' (A.D. 359), composed by Mark, bishop of Arethusa, declared the Son to be ὅμοιον τῷ γεννήσαντι αὐτὸν πατρί with the addition 'according to the Scriptures,' which allowed the Arians to put their own sense on the words. It was this *Homœan* Arianism that was accepted under Imperial pressure at Ariminum Seleucia.

9. Already, however, a reaction had begun. In the first place, the Arianizers were divided among themselves. Logical and consistent Arians, like Aëtius and his disciple Eunomius of Cyzicus, were prepared to push the teaching of Arius to its ultimate conclusion. If the Son was not God in the same sense as the Father, He could not be like Him, for there can be nothing like God. Their argument, different as was the inference drawn from it, was the same as that used by Athanasius himself. 'Like is not predicated of essence, but of habits and qualities; for in the case of essences we speak not of likeness, but of identity' (*de Synodis*, 53). From their denial of the likeness of the Son to the Father this class of Arians were called *Anomœans*. But the majority of Arians were men of compromise and evasion, having no other idea than to insinuate their opinions under the guise of apparently innocuous phraseology. These, led by the dexterous Acacius of Cæsarea, allowed that the Son might be acknowledged to be *like* the Father, and were consequently called *Homœans*. Lastly, there was the party headed by Basil of Ancyra, the successors of those conservatives who had opposed Athanasius. These men, who constituted the strength of the episcopate of Asia Minor, were as hostile to Arianism as Athanasius himself, and were ready to accept the term οὐσία in their definition of the Godhead. Fearing that Sabellianism underlay the use of ὁμοούσιον, they rejected the Nicene test word, but were ready to admit that our Lord was like in substance (ὁμοιούσιος) to the Father. This formidable combination was known as the party of the Semi-Arians (*q.v.*). At heart most of them were orthodox, and this the two great champions of the Nicene faith, Athanasius and Hilary, bishop of Poitiers (who had been exiled by Constantius to Asia Minor), had the wisdom to perceive. After their triumph at Seleucia and Ariminum, the Arians and Homœans had the folly to attempt to crush these Semi-Arians at the Synod of Constantinople (A.D. 360), and thereby drove them in self-defence into the arms of the Nicenes. It needed only the rise of the great Cappadocian Fathers, Basil of Neo-Cæsarea, Gregory of Nyssa, and Gregory of Nazianzus, to complete the triumph of the Nicene Christology.

The Semi-Arians and the Cappadocian Fathers are subjects of separate treatment in this work; and it is unnecessary to do more here than allude to the important dispute as to the final settlement of the Arian controversy. The question at issue is whether the *Homoousion* was ultimately accepted in the sense of *Homoiousion*. This Dr. Harnack maintains to have been the case. His contention is very ably disputed by Mr. Bethune-Baker in *The Cambridge Texts and Studies* ('The meaning of Homoousios'). Attention should be paid to Professor Gwatkin's most instructive survey of the importance of Asia Minor to the Eastern Empire, which 'as long as that was unsubdued, remained upon the whole the strongest power on earth' (*Studies of Arianism*[2], p. 94). With true historic insight Gwatkin points out that in the Arian controversy Asia really played the part of the deciding factor. Disliking the *Homoousion* because it was an innovation, the steady conservatism of Asia accepted it when it was proved to be the only means of averting worse evils. 'Even the later Cappadocian orthodoxy,' he adds, 'rested on a conservative rather than a Nicene basis.' One of the chief representatives of Semi-Arianism is Cyril of Jerusalem (see Hort, *Two Dissertations*, p. 84).

10. The Arian party in A.D. 360 'was in a position too plainly artificial to be permanent' (Bright, *DCB* i. 197[a]), and the death of Constantius on 3rd Nov., 361, revealed its inherent weakness. Rome and the West at once returned to adherence to the Nicene faith, as though the Council of Ariminum had never assembled. Just before the Emperor's death, Meletius was, at the instigation of Acacius, elected bishop of Antioch, and his dramatic declaration of his faith at his installation showed the strength of popular feeling against Homœan Arianism. Constantius demanded that the new bishop should preach on the text κύριος ἔκτισέ με, 'The Lord created me,' *i.e.* wisdom; for so Pr 8[22] is translated by the LXX, and on this the Arians based their doctrine that the Son was a κτίσμα. To the delight of the people, always at this time more orthodox than the bishops, Meletius declared that the word ἔκτισε was a mistranslation of the Hebrew קנה, 'possessed,' and gave a decidedly Nicene interpretation to the text (the sermon is preserved by Epiph. *Hær.* 73. 29–33). 'This bold confession,' says Professor Gwatkin, 'proved to be the first effective blow at the Homœan supremacy' (*op. cit.* p. 187 f.). But perhaps the most crucial point was the return of Athanasius to Alexandria under Julian, when he held a small but very important Council at Alexandria, the great work of which was to clear up the misunderstanding due to the employment of such words as οὐσία and ὑπόστασις. It was agreed that there might be a fundamental agreement between those who employed these terms in different senses, but that the language of the Nicene Council was the safest which could be made use of. This paved the way for a reconciliation between the conservatives, with their dread of Sabellianism, and the Athanasian and Western Christians, who clung to the importance of the Unity of the Divine essence. As Bethune-Baker says, 'By the 4th cent. it was becoming clear that the only solution of the problem was to be found in a distinction inside the divine unity . . . it was necessary to revise the idea of divine personality and to acknowledge not three individuals but three eternal aspects of the Divine' (*Chr. Doct.* p. 157 n.). This was done when the distinction in meaning between οὐσία and ὑπόστασις was agreed upon, and the ambiguity of the Latin and Greek terminology removed.

In the early days of the controversy the terms οὐσία and ὑπόστασις were used interchangeably. The confusion caused great misunderstanding, because, whilst one part of Christendom spoke of τρεῖς ὑποστάσεις in the Trinity, the other acknowledged only one. By distinguishing between οὐσία and ὑπόστασις, and explaining the mystery of the Trinity as μία οὐσία τρεῖς ὑποστάσεις, the ambiguity was removed. This was the work

of the Cappadocian Fathers, but it really began with the Council of Alexandria. In Latin legal language *substantia* means property, and *persona* a being with legal rights, a 'party' in an action at law. Thus a *persona* might own several *substantiæ*, and a *substantia* might belong to more than one *persona*. Tertullian uses *substantia* in the sense of essence, or 'substance,' of which Father, Son, and Holy Ghost partake; but he seems to hesitate to use *persona* if he can avoid it. He takes the word from the Old Latin Bible *quotidie oblectabar in persona eius* (Pr 8^{30}), and *Spiritus personæ eius Christus dominus* (see Bethune-Baker, *op. cit.* pp. 139, 235, 'Meaning of Homoousios,' p. 21; Bigg, *op. cit.* pp. 163, 164; Harnack, *op. cit.* iv. 83; Gwatkin, p. 209 ff.). The Council of Alexandria forecasts the future development of doctrine by implicitly condemning Apollinarism (*q.v.*) and the denial of the Divinity of the Holy Ghost which subsequently became characteristic of Semi-Arianism.

11. But though Arianism may justly be described as collapsing with the death of Constantius, it remained, in its *Homœan* form, the official religion of the eastern half of the Roman Empire down to A.D. 378. On the death of Jovian (A.D. 364), Valentinian was chosen as emperor by the army on Feb. 26, and associated his brother Valens with him on the 29th of March, taking upon himself the government of the Western provinces, and assigning the Eastern to Valens. The stern but just Valentinian pursued a rigidly impartial policy in matters of religion, and though Milan, the governmental capital of Italy, remained under an Arian bishop, orthodoxy generally prevailed in Italy, Gaul, Spain, and Africa. Valens, on the other hand, supported the Homœans, thereby forcing the Semi-Arian party to open negotiations with Liberius, bishop of Rome, and his successor Damasus. The Homœan supremacy lasted down to the defeat and death of Valens at Adrianople (Aug. 9th, 378). Valentinian had died three years earlier, and his son Gratian had the magnanimity to appoint Theodosius, son of a distinguished official who had been put to death under Valentinian and Valens, as his colleague in the Eastern provinces. Theodosius, an orthodox Spaniard, cleared the Roman territory of victorious Goths, and, being afflicted with sickness in the year following his accession (A.D. 380), accepted baptism at the hands of Ascolius, bishop of Thessalonica. Theodosius took the faith of Rome and Alexandria as the norm of Christian belief in a law commanding all to follow the faith 'committed by the Apostle Peter to the Romans, and now professed by Damasus of Rome and Peter of Alexandria' (Cod. Theod. xvi. 1, 2). He allowed Gregory of Nazianzus to establish himself in Constantinople and to preach the doctrine upheld so strenuously by his friend Basil, bishop of Neo-Cæsarea (d. 379), in the evil days of Valens. The room in which Gregory delivered his discourses against the Arians became the Church of the Anastasia, the Resurrection of the Faith. In 381 the comparatively insignificant assembly, afterwards known as the Second General Council, met at Constantinople to confirm the faith of Nicæa. Further overtures were made to the Arians in the ensuing years; but in A.D. 383, Arianism was finally proscribed, and ceased to be legal for Roman citizens to profess.

Of the interval between the Councils of Alexandria (A.D. 362) and Constantinople (A.D. 381), though extremely important in the history of dogma, it is not necessary to treat at length in an account of Arianism, whose very triumph in the last days of Constantius made its ultimate downfall only a matter of time. In the present article it is only requisite to mention a few landmarks, referring the reader to the articles CAPPADOCIAN THEOLOGY and SEMI-ARIANISM. The Semi-Arians were at first favoured by Valens and allowed to assemble at Lampsacus, where they declared the Son to be ὅμοιος κατ' οὐσίαν to the Father, and cast out the Homœan Eudoxius and Acacius. Eudoxius, however, gained the Emperor's ear, and Valens expelled the Semi-Arians from their sees for refusing to communicate with the Homœans. One of their most distinguished leaders, Eleusius of Cyzicus, complied with the Imperial demands and acknowledged Eudoxius, but he repented bitterly of his action. Then came the negotiations with Rome, culminating in the Synod of Tyana (A.D. 367). The Semi-Arians were not really disposed to accept the Nicene faith in its entirety; and under the name of Macedonians many refused to acknowledge the proper Divinity of the Holy Spirit (Hefele, *Hist. of Councils*, § 88). The work of Basil and his friends, hampered as it was by the unfortunate schism at Antioch, was directed to a real reconciliation of those who were at heart orthodox to the Homoousian doctrine. For the question as to which creed was accepted by the Council of Constantinople in A.D. 381 see Gwatkin, *The Arian Controversy*; Burn, *Introduction to the Creeds*; and, above all, Hort, *Two Dissertations*.

12. Arianism may be defined as an attempt to determine the relations of the Persons of the Trinity on a basis of distinction and subordination. Despite all the efforts of Arius to popularize his opinions, they never found favour with the people. The movement was clerical rather than lay; the difficulties it sought to overcome were those of Origenist theologians perplexed by philosophical doubts and seeking an explanation where none was possible. Nor did Arianism pure and simple ever fail to arouse a strong feeling of indignation: the creed of Arius at Nicæa, the Sirmian 'blasphemy,' the opinions of Aëtius and Eunomius, all caused a storm. It was only by insinuating itself in the plausible guise of Scriptural phraseology that Arianism ever obtained a hearing. Nor could it be otherwise. An Arian Christ, a created Logos unable to reveal an unknown God, could never be the Christ acknowledged by Christians as the Incarnate Word, the sole Mediator between God and man, the supreme Sacrifice for the sin of the world. All who acknowledged this adhered at heart to the Nicene doctrine, however they might object to the language in which it was expressed. The great merit of Athanasius was his ability to recognize this truth; and he and Hilary were ready to make any concessions to those who shared the spirit, though they might not adopt the phraseology, of Nicæa. The test word *Homoousios* hardly appears in the works of Athanasius.

Arianism does not seem to have sprung from any strong ethical impulse. Its philosophy was pagan, and the object of its leaders was political rather than religious. 'Arius tried to interpret the Christian revelation in such a way as to render it acceptable to men whose whole conception of God and of life was heathen' (Bethune-Baker, *op. cit.* p. 156). His heresy was, in short, a symptom of the disease of the Church in the 4th cent. induced by the desire of ingratiating itself with the civil power. What the Roman government required when it invited the Christian Church to enter into alliance with it was that the Faith should cause as little disturbance as possible to the existing order of society. Arianism promised to provide this, in the form of a creed offering an easy and almost imperceptible transition from paganism to Christianity. By the edict of Milan, Christianity, the religion of the minority, had been virtually accepted by the Roman government, which thereby had committed itself to the policy of making it the religion of the majority. Arianism, by surrendering the chief characteristic of Christianity, the proper Divinity of Christ, made the new faith less hard to accept; and for this reason the Emperors, though from time to time encouraging the Nicene theology, were naturally disposed, especially in the Eastern provinces, towards Arianism. But, as the long controversy showed, the Arian doctrine led not merely to an accommodation to pagan theology, but also to an approach to pagan morality. For though some, especially of the extreme Arians, were faithful to their opinions, the majority of the party were dexterous politicians ready to serve the interests of the corrupt court of Constantius. Bishop Robertson sums up the character of many of the Arian intriguers when he says of Acacius of Cæsarea: 'The real opinions of a man with such a record are naturally not easy to determine, but we may be sure that he was in thorough sympathy

with the policy of Constantius, namely, the union of all parties in the Church on the basis of subserviency to the State' (*Athanasius*, p. liv). The men most opposed to the rapid secularization of the Church which characterized the 4th cent. were almost uniformly opposed to Arian teaching.

13. None the less, the Arian controversy was not wholly unreasonable; indeed, it was the inevitable outcome of the tendencies of the age. A Sabellian Christology would have been as fatal to Christianity as that of Arius, since it would have robbed the Incarnation of its reality, making it little more than a phase in the revelation of God, and depriving the Church of an ever-present Divine Master. Eusebius of Cæsarea was only reasonable when he demanded at Nicæa that the creed should not be perverted to encourage this error; and the views propounded by Marcellus of Ancyra and Photinus served to justify his action and that of the conservative and Origenist bishops of the East. It was not indeed till the Creed secured the adherence of Asiatic Origenists like the Cappadocians, Basil, Gregory of Nyssa, and Gregory of Nazianzus, that it was really accepted. The episcopate of Basil, the eloquence of Gregory of Nazianzus, and the philosophy of Gregory of Nyssa were alike instrumental in inducing the bishops of Asia and Syria to accept the *Homoousion* as the one and only safeguard of the Divinity of the Son against the specious teaching of the Arians.

14. But though the Arian controversy virtually ended with the Council of Constantinople in A.D. 381, it was fruitful in new disputes destined to distract and divide Christendom. As early as the time of his banishment to Phrygia (A.D. 356), Hilary of Poitiers was able to foretell the approach of a heresy concerning the Divinity of the Holy Spirit (*de Trin.* lib. ii. and viii.; Swete, *Hist. of the Doct. of the Procession of the Holy Spirit*, p. 112). In 358 the rise of the Tropici caused St. Athanasius to enter, in the *Letters to Serapion*, upon the subject of the Divinity and Procession of the Spirit (Swete, *op. cit.* p. 91; see also pp. 47–49). The subject was also considered at the Council of Alexandria (A.D. 362); and about the same time Macedonius, the Semi-Arian bishop of Constantinople, deposed by the Homœan Synod in A.D. 360, was elaborating the theory (which was afterwards known by his name) that the Son was like, and the Holy Spirit unlike the Father. Though the controversies caused by this question never roused the world like those on the Divinity of the Son, the consequences were even more serious, the question of the Procession of the Holy Ghost being the pretext of the schism between Eastern and Western Christendom. Even more fruitful in divisions was the problem raised by Apollinaris of Laodicæa, one of the chief opponents of Arianism, concerning the relations of the Manhood to the Godhead of Christ. See APOLLINARISM.

The principle for which Athanasius contended so nobly, and which he asserted in early youth before the appearance of Arianism, was the union between God and man brought about by the Incarnation (*de Incarnatione*). But the zeal with which the Divinity of the Son was asserted tended, as Harnack truly says, to obscure the historical Jesus (*op. cit.* iv.); and theology occupied itself with the dogmatic aspect of the Divine rather than with the practical example of the human Christ.

15. It is a remarkable fact that one of the results of the great dogmatic controversies in the early Church was that the defeated party displayed conspicuous zeal in missionary effort; and, without sparing condemnation of the self-seeking and unscrupulous spirit of the political Arians, we have also to remember that some later Arians, like the heresiarch himself, were ready to condescend to instruct the simple. Possibly Arius believed that by re-stating the theology of the Church in terms suited to his age he was doing good service in rendering the faith acceptable to the heathen; and his followers found ready converts among the Teutonic invaders of the empire. The exile of Arius to Illyricum resulted not only in the appearance of those two champions of his heresy in the West, the bishops Ursacius and Valens, but also, if we are to judge from results, in the conversion of the neighbouring Goths, and through them of the Teutonic nations, to Christianity of an Arian type. For long years the dividing line between the Roman and the Teutonic invader of his territory was that of religion rather than that of race. It is our misfortune that we have little or no information concerning the labours of the unknown Arian apostles of the Goths, Vandals, Lombards, and Burgundians. The fact that Cyrila, the Vandal bishop or pope of Carthage, knew Latin very imperfectly (Victor Vitensis, lib. ii.), and the appearance of the famous Gothic version of the Scriptures, would seem to indicate that the barbarians were taught the doctrines of Christianity in their own languages, in which case their Arianism must have differed much from the refined subtlety which distinguished that of the schools of the Empire, and is perhaps expressed in the blunt refusal of the Burgundian Gundobald to worship three Gods (Avitus, *Ep.* xli.). But there seems little doubt that the transforming effects of the Christianity which the barbarians adopted were genuine. Both Salvian and Orosius praise the virtues of the Arian conquerors of Roman territory, and Augustine (*de Civitate Dei*, i.) relates how moderately the Visigothic Arians who captured Rome under Alaric treated the inhabitants of the city, and what respect they showed for the sanctity of the Christian Churches. The long reign, moreover, of the Arian Theodoric in Italy, and his impartial government, extort, as Milman remarks, 'the praise of the most zealous Catholic' (*Latin Christianity*, bk. iii. ch. iii.).

Ulfilas is mentioned by Socrates (ii. 41, iv. 33), Sozomen (vi. 37), Theodoret (iv. 33), Philostorgius (*HE* ii. 5), and Jordanes (ch. 51), but the most important document is the fragment of his pupil Auxentius, Arian bishop of Dorostorus (now Silistria), discovered by Waitz (*Ueber das Leben und die Lehre des Ulfilas*, 1840). Auxentius made remarks in the margin of a copy of the Acts of the Council of Aquileia (A.D. 381), at which the Catholics were led by St. Ambrose against the Western Arians under Palladius and Secundianus. In the course of his criticisms of the *Acta*, Auxentius makes mention of his master Ulfilas, who brought him up both physically and spiritually as his son in the faith. The facts of the life of Ulfilas seem to be that he was born of noble Gothic parentage, or, according to Philostorgius, he was the descendant of Cappadocians who had been carried captive. According to Socrates, he was a Christian from childhood, a pupil of Theophilus, the Gothic bishop present at Nicæa. He was ordained a reader, and about A.D. 340 he was sent on an embassy to Constantinople. [In the following year he was made a bishop at the Council of the Dedication by Eusebius of Nicomedia. He laboured among his people in Dacia, but owing to a persecution he led the Christian Goths into Mœsia, at the foot of Mount Hæmus, where they were allowed by the Emperor Constantius to settle. These *Gothi minores* are described by Jordanes. Both Philostorgius and Auxentius compare Ulfilas to Moses; and if a more modern instance is permissible, we may recall the work of John Eliot, the Puritan of Jesus College, Cambridge, among the Algonquin Indians in the 17th century. Like Ulfilas, Eliot gave his converts the Bible in their vernacular. Ulfilas on his deathbed declared his belief, which is given by Auxentius, who comments in a decidedly Arian fashion on it. In this creed the Divinity of the Holy Spirit is expressly denied. Harnack (*op. cit.* vol. iv. p. 44, Eng. tr.) says it is the only Arian creed which is not polemical. It is found in Hahn, § 198. Theodoret says that Ulfilas was persuaded by Eudoxius that the controversy was unimportant; but from the statement of Auxentius he seems to have been a convinced Homœan Arian (see C. A. Scott, *Ulfilas*, 1885).

16. In the Western provinces of the Empire during the 5th and part of the 6th cent., Arianism was the religion of the conquerors, and orthodoxy that of the conquered. Nor did the Catholic faith triumph by force or worldly power so much as by persuasion, since at one time there was not a single orthodox ruler in the Empire or among the barbarians. It

was then that the belief of Rome, and the Churches in communion with her, won its most signal triumph in the conversion of Clovis and the Salian Franks (A.D. 496). The strength of the organization of the Church of the fallen Empire stands in remarkable contrast to the weakness of the less disciplined national churches of its Arian invaders. As Dr. Hodgkin remarks, 'The Arian bishops took their fill of court favour and influence while it lasted, but made no provision for the future. They stood apart from one another in stupid and ignorant isolation. Untouched apparently by the great Augustinian thought of the world-encompassing city of God, they tended more and more to form local tribal churches, one for the Visigoths, another for the Vandals, another for the Burgundians. And thus in the end the fable of the loosened faggot and the broken sticks proved true of all the Arian monarchies' (*Italy and Her Invaders*, vol. iii. p. 345; see also Gwatkin, *op. cit.* p. 272).

The events which followed the conversion of Clovis showed the immense political power of the Catholic-Nicene Church of the West. The important Visigothic kingdom of Toulouse, which lasted for nearly a hundred years, and reached the acme of its power under Euric (A.D. 466–484), fell before the Frankish arms at the decisive battle of Vouglé (A.D. 508). The war of Euric against Auvergne, in defence of which Ecdicius and the bishop Sidonius Apollinaris played so valiant a part, was one of Arian against Catholic; and the triumph of the former was followed by severe measures of repression, which have been termed a persecution. (For a discussion of these measures see C. A. Scott, *Ulfilas*, p. 185; and *DCB*, art. 'Euric,' by Mrs. Humphry Ward, who quotes the letter of Sidonius [*Ep.* vii. 6]). Mrs. Ward suggests that Gregory of Tours has misunderstood Sidonius' allusion to the natural death of bishops, to whose vacant sees Euric refused to permit a successor to be chosen, and imagined that they were slain by Euric. After the conversion of Clovis the Catholics had their revenge; that astute prince realized the value of their assistance, and made the expedition against Alaric, the son of Euric, a holy war. 'Valde molestè ferò' were his pious words, 'quod *hi Ariani* partem tenèant Galliarum, eamus cum Dei adjutorio, et, superatis eis, redigamus terram in ditionem nostram' (Greg. Tours, ii. 37). In the case of the Burgundian Gundobald, the Catholic spokesman Avitus, bishop of Vienne, held out, as an inducement to him to embrace orthodoxy, that he would be protected against Clovis (Avitus, *Ep.* v. 17, quoted by Hodgkin, *Italy and Her Invaders*, vol. iii. p. 347). The fall of the Visigothic kingdom in Italy is an even stronger proof of the political strength of orthodoxy. The admirable rule of Theodoric, his fairness and toleration, were of no avail to save his dynasty; directly an orthodox Emperor was on the throne at Constantinople, the Church intrigued against him and his family. 'Totila,' says Professor Gwatkin, 'was a model of barbarian justice; yet even Totila could never venture to arm the provincials against the orthodox oppressor' (*op. cit.* p. 272).

Mr. C. A. Scott, in his useful monograph on Ulfilas, gives the secret of the broad distinction between the Arianism within and without the Empire. He explains the fact that the Christian Romans who adopted the opinions of Arius showed from the first a tendency to moral deterioration, whereas the barbarians improved in every respect under the influence of a creed which relegated the Son to a lower position than the Father, by reminding us that, whereas in the case of the Arianizing clergy in the days of Constantius, there was a fall from a higher to a lower conception of Christianity, the Teutons were making a distinct advance in substituting an Arian Christianity for heathenism (*Ulfilas*, ch. viii.).

In the same chapter (p. 172 ff.) Mr. Scott gives some useful hints about the few traces of Arian Church organization among the barbarians—a subject on which we are almost entirely in the dark.

17. It may be that the northern invaders found in Arianism an easy transition from polytheism to Christianity (Hodgkin, *op. cit.* p. 88); and their firm adherence to the doctrines which they had been taught, though they can have understood only imperfectly the subtle distinctions between *Homœan* and *Homoousian* Christianity, is very remarkable. But, despite Professor Gwatkin's assertion that the victory of Clovis over the Visigoths was an evidence of the inferiority of the Arian theology of the barbarians to the Nicene doctrine accepted by the Franks (*op. cit.* p. 273)—a view which the present writer himself formerly held (*Cambridge Theological Essays*, p. 500)—we are convinced that the Arianism of the Visigoths, Lombards, Vandals, etc., was no more than a phase in the ecclesiastical struggle between the Teutonic and the Roman conception of Christianity. The barbarians desired to have their own national Church, and when they found a form of Christianity which kept them separate from the despised provincial and independent of the clergy of the Empire, they held to it with the proud firmness of a conquering race. Their natural reverence for Roman civilization made them as a rule nobly tolerant of the religion it sanctioned; and when they are said to have been persecutors, the motive must have been mainly political. Euric's 'persecution' in Toulouse has been compared with the *Kulturkampf* in Germany, and it bears an even stronger resemblance to the more bitter struggle between Church and State in France, where the reason given for depressing the former is the determination not to submit to any external interference.

The inherent weakness of the barbarian occupants of the Roman territory was their incapacity for organization, whilst the strength of the Romans in both their civil and their ecclesiastical polity lay in a system tested by the experience of centuries. The Arian churches were as little able to maintain themselves as the short-lived Teutonic kingdoms, and their clergy had ultimately to surrender at discretion to the better disciplined church of the Roman provincials. The destruction of Arianism as a rival system is one of the most important factors in the genesis of modern European civilization; for, had the barbarian conquerors professed one form of Christianity and the weaker race another, no progress would have been possible. Oppressive as the unregulated feudalism of the dark ages was, it would have been intolerable if the conquerors had not had the claim of a common Christianity to encourage consideration for their vanquished subjects.

The chief authority for the history of Arianism among the Teutons, besides those already cited, is St. Gregory of Tours (especially vi. 48, the story of the interview between Gregory and Opila, the Spanish ambassador to Chilperic. When examined as to his creed, Opila said, 'Credo patrem et filium et spiritum sanctum unius esse virtutis.' 'In that case,' answered Gregory, 'why will you not receive the communion with us'? 'Quia, inquit, gloriam non recte respondetis, nam iuxta Paulum apostolum nos dicimus Gloria deo patri per filium; vos autem dicitis, Gloria patri et filio et spiritui sancto,' etc.). See Sidonius Apollinaris, *Epistles*, bk. vii. The ninety-one letters of Avitus, bp. of Vienne, should be consulted; see also Gibbon, *Decline and Fall*, ch. xxvii.; Revillout, *Arianisme chez les peuples germaniques*; Maimbourg, *Hist. of Arianism*, bk. x.; Hodgkin, *Italy and Her Invaders*.

18. Every barbarian kingdom ultimately abandoned Arianism, or else, as in the case of the Ostrogoths in Italy and the Vandals in Africa, Arianism proved one of the causes of national ruin. The principal Arian nations were the Burgundians, the Visigoths, and the Lombards; and each in turn, after a severe struggle, abandoned the form of Christianity in which they had been instructed for the Niceno-Roman faith. As the chief reasons for their conversion were political, the reader is referred to the history of the period; all that is possible in this article is to give the main features of the struggle with the orthodox prelates, in which each of the three nations mentioned eventually succumbed. The Burgundians do not seem to have been originally Arians; indeed, if we are to believe Socrates, who wrote in the reign of Theodosius II. (*c.* A.D. 430), they were originally Catholics (*HE* vii. 30); see also *DCB*, artt. 'Gundicarius,' and 'Orosius.' It would seem that the Burgundians were never entirely Arian, though the majority of the nation at the time of Clovis were

of that persuasion. It is an open question whether Gundobald, the contemporary of Clovis, was Arian or orthodox (Greg. Tours, *Hist. Franc.* ii. 34, iii. prologue; Avitus, *Ep.*). His son, the unfortunate Sigismund, was certainly orthodox, whilst the next king Godomar (also a son of Gundobald) was an Arian. In A.D. 534 the Franks subdued Burgundy; but Arianism seems to have continued to drag out an obscure existence till the end of the century (Revillout, *op. cit.* p. 218).

19. After their defeat by Clovis, the Visigoths were gradually driven out of all Gaul except Septimania, the coast from the Pyrenees to the Rhone, being otherwise confined to the Spanish peninsula. In their dominions as elsewhere the Roman provincials remained orthodox, and in the seaport towns the influence of Constantinople was still considerable. Spain, however, was the great stronghold of Arianism, which made a long and obstinate struggle before it gave way to the orthodox belief of the Empire. In A.D. 569 the able Leovigild became king of the Visigoths; and, after a series of successful campaigns, reduced his people to almost complete submission to his authority. His son Hermenigild was married to Ingunthis, daughter of Sigibert and Brunichildis of Austrasia. The bride (she was only thirteen years of age) was expected to become an easy convert from Frankish orthodoxy to Visigothic Arianism. She proved, however, very firm in her faith, and absolutely refused to be re-baptized by the Arians, though her grandmother Goiswintha, the wife of Leovigild, treated her with great brutality. To prevent further trouble in his family, Leovigild made his son king, and gave him a separate establishment at Seville. There, it is said, by the influence of his uncle, the famous bishop Leander, and that of his wife, Hermenigild became a Catholic. The young prince soon rebelled against his father, and with the assistance of the Catholic provincials and the Byzantines his party became very formidable. To conciliate his subjects, Leovigild visited the churches, and professed that his belief was Catholic save for his denial of the Divinity of the Holy Spirit, for which he was able to find no Scriptural warrant. He also made a remarkable concession to the prejudices of his subjects, by allowing them to go from the *Roman* to the *Catholic Church*, for so the Arians denominated their body (*de Romana religione ad nostram catholicam fidem*), without any repetition of the baptismal rite, but merely by imposition of hands and saying the *Gloria* in the Arian form, 'Patri per Filium in Spiritu Sancto.' The rebellion of Hermenigild was suppressed, and Leovigild is said to have persecuted the orthodox faith with severity. The unfortunate Hermenigild was put to death, and received, on somewhat doubtful authority, the honours of canonization at the hands of Pope Urban VIII. (1623–1644). Leovigild died in A.D. 586, and was succeeded by his son Reccared. One of the first acts of Reccared was to declare himself in favour of the Catholics, and, according to Gregory of Tours (ix. 15), he arranged a disputation in A.D. 587 between the adherents of the two creeds, after which he embraced the Nicene faith; but this Synod is passed over in all collections of Councils save Mansi's (Hefele, *Councils*, sec. 286). Two years later, Reccared held the famous third Council of Toledo, at which 67 bishops and only 5 nobles were present. The leading bishops were St. Leander of Seville, uncle to the king, and Massona of Emerita. Twenty-three anathemas were pronounced against Arianism, the most interesting of which are *the third*, which declares the procession of the Holy Ghost from the Father *and the Son*; *the seventh*, against those who maintain that the Son is ignorant of anything; *the ninth*, against declaring that the Son in His Godhead was ever visible; *the fourteenth*, prescribing the correct form of the *Gloria*; *the sixteenth*, condemning the 'abominable treatise which we composed' to seduce the provincials into the Arian heresy, *i.e.* at the Arian Synod at Toledo (581); and *the seventeenth*, against those who refuse to condemn the Synod of Ariminum (A.D. 359). 'The holy creed' (the Niceno-Constantinopolitan) was ordered to be recited before communion after the manner of the Greek Fathers; and, as is well known, the creed to which Reccared and his queen Badda, together with the bishops including eight Arians, subscribed, contained the fateful addition of the *Filioque*. Arianism, however, was not suppressed by Reccared without force, as many of the Gothic nobles held out for some years.

For fuller particulars concerning this Council ses Gams, *Kirchengesch. von Spanien*, vol. ii. pt. i. secs. 6–16; also Dahn, *Urgeschichte der german. und roman. Völker*, p. 515. The native chronicler is Johannes Biclarensis (Migne, *Patrol. Lat.* vol. lxxii.). It is noteworthy that from Spain proceeded the one important Western heresy concerning the person of the Son—the Adoptian (see ADOPTIANISM), promulgated by Elipandus, metropolitan of Toledo, and condemned at the Council of Frankfort (A.D. 794).

20. The Lombard conquerors of Italy were Arians down to the close of the 6th cent., and, even in the days of St. Gregory the Great, Autharis, their king, forbade any of his Lombards to give their children Catholic baptism. But shortly before his death Autharis married the Bavarian princess Theodelinda, who had been brought up in the Catholic faith. So great an impression did her wisdom and beauty make on her people, that, when she became a widow, the dukes of the Lombards begged her to select her own husband and continue to reign over them. She chose Agilulf, and by her persuasions the new king was gradually reconciled to the Catholic faith. It was to Theodelinda that Gregory addressed that most interesting revelation of the credulity of his age, the *Dialogues*. Traces of Arianism remained among the Lombards down to the middle of the next century, and it is not at all certain by what means the whole nation was induced to abandon the heresy. The Roman pontiffs regarded them always with the greatest apprehension and abhorrence. For the correspondence between Gregory and Theodelinda see Hodgkin, *Italy and Her Invaders* (1899), vols. v., vi., and Homes Dudden, *Gregory the Great* (1905).

The whole subject of the transition of the Teutons from Arianism to Catholicism is one of great obscurity, and deserves careful investigation. Of the Churches nothing seems to have survived, and, except Ulfilas' translation, there is no literature which has come down to us. The three important factors in the destruction of Arianism were the power of the Franks enlisted on the side of orthodoxy, the weight of influence which the subject Roman provincials were able to throw on the side they favoured in any struggle between rival barbarians, and the part taken by the wives of the kings and chieftains in bringing their people over to the religion of the Romans. Teutonic Arianism was at best a semi-barbarous Christianity; and it is interesting to observe that a form of Christianity, which began with the highly educated bishops of the East as a speculative creed, ended in the West as the national religion of ignorant barbarian warriors. But the struggle between Catholicism and Arianism in Western Europe was no less critical and far more protracted than in the eastern provinces.

21. During the Middle Ages there seems to have been little if any revival of Arian opinions properly so called, the tendency being perhaps in the direction of Sabellianism rather than otherwise, though the drift of Christian thought led men to speculate more on the nature of the Church, and eventually on the position of the Virgin Mary in the hierarchy of heaven, than on Christ (Dorner, *Doct. of the Person of Christ*, Div. II. vol. i. [Third Section]).

'Subordinationism, on the contrary,' says Dorner, 'durst no longer raise its head in the form of naked Arianism within the bosom of the Church; it was, however, permitted to conceal itself beneath a species of Tritheism, as in the case of Roscellin; or to unite itself with Sabellianism, as in the case of the Abbot Joachim of Floris, whose view is suggestive of Tertullian's trinity

of the three ages of the world. But they touched Christology merely at a few points.'

It was not till more freedom in theological speculation became possible and theology was subjected to criticism in a rationalistic spirit that anything resembling Arianism made its appearance, and then in a shape different from the opinions of Arius and his adherents. After the Reformation the term 'Arian' was frequently misapplied to those who really held Unitarian views; and before discussing the later developments of those opinions which derogated from the supreme Godhead of the Son, it may be well to explain the difference between the position assumed by the Arians of the 4th cent. and their more modern followers. The Arian controversy proper concerned the Nature of the Divine Logos rather than the historic Christ of the Gospels. Arius and all his disciples acknowledged the pre-existence of our Lord, and concerned themselves but little with His Humanity. Indeed, Arius practically denied the manhood of our Lord, by teaching that His human body was animated by the Logos. But this Logos, though the creative principle by which all things were made, was, according to his teaching, not really of God, but a demi-god called into being to create the world, and, in the Incarnate Christ, to save mankind. No serious attempt was made to renew this heresy at the time of the Reformation.

Unitarianism started, on the other hand, with the denial of the pre-existence of Christ, who was declared to be no more than man, though miraculously born of the Virgin Mary and actually raised from the dead. The first Unitarians were Italians, and the majority took refuge in Poland, where the laxity of the laws and the independence of the nobility secured for them a toleration which would have been denied to their views in other countries. They were divided into two main parties: those who declared that worship ought to be paid to Christ, and those who held that to adore Him, a creature, was idolatry. The leader of the former party was Faustus Socinus (Sozzini), and those who followed him are often termed Arians to distinguish them from genuine Unitarians like Blandrata and Francis Davidi. These opinions, however, must be considered apart from Arianism proper, which is the subject of the present article.

See Toulmin's *Memoirs of Faustus Socinus*. In his introduction this author says that some of the Unitarians adopted Arian notions, and he distinguishes these from the followers of Socinus (see Liddon's *Bampton Lectures*, Lect. vii.). In mentioning Legate, the unfortunate heretic who was burned at Smithfield in the reign of James I., we observe that most Church historians style him 'an Arian.' According to Fuller (*Church History*, x. iv. 9), Legate held that Christ had no existence before His conception by the Virgin. Milton has been charged with Arianism on account of his representation of the sending of the Son by the Father to pronounce sentence on Adam and Eve (*Paradise Lost*, x. 55):

> 'But whom send I to judge them? whom but thee,
> Vicegerent Son? To thee I have transferr'd
> All judgement . . .'

But even if it is fair to judge a poet for words evidently dramatic, this subordinationism is not Arianism in its strict sense. Compare the expressions in the fragment, *In illud omnia*, attributed to Athanasius by Bp. Robertson, *Athanasius*, p. 87. In the tract *de Doctrina Christiana*, published by the Camden Society and in Bohn's *Prose Works of Milton*, the theological views of the poet are put forward. He opposes the teaching of the Calvinists on Free Will, and works out from the Bible a Christology of a Semi-Arian character. He does not appear to have been deeply read in the Fathers (*Dict. Nat. Biog.*, art. 'Milton'). For Sir Isaac Newton's views of Athanasius, which were decidedly hostile to the bishop and favourable to Constantius, see Sir David Brewster's *Life of Newton*, vol. ii. p. 342; Hallam's *Literature of Europe*, vol. iv. p. 36.

22. In the 17th cent. there was a tendency towards Arian opinions, due partly to the arguments advanced by the learned Jesuit Petavius in justification of the claim of the Roman Church to prescribe fresh articles of belief; for, though Sandius, a Unitarian, accuses Petavius of secretly holding Arian opinions, Bull was charitable and acute enough to see that the drift of his thesis, that the Anti-Nicene Fathers did not hold the doctrine of the Council, was completely different, and that he had the cause of the Papacy rather than that of Arius in his mind ('pontificiæ potius quam Arianæ causæ consultum voluisse,' *Def. Fidei Nic.* Proem. § 8). Bull's famous treatise in defence of the faith of Nicæa appeared in 1684; and ten years later he wrote his *Judicium Ecclesiæ Catholicæ* in answer to views similar to those of Petavius advanced by the Remonstrant Episcopius, an amiable and learned man, whose object was not so much to attack the Trinitarian position as to maintain its comparative insignificance as an essential of Christianity ('frigidum nimis tantæ veritatis vindicem se ostendit,' *Introd.*; see also Nelson, *Life of Bull*, ch. lxvi.). The *Judicium*, as is well known, was highly commended by the great Bossuet, bishop of Meaux, and the clergy of the Gallican Church (*Life*, ch. lxvii.). The opponents of Bishop Bull were not, as a rule, Englishmen, anti-Trinitarian opinions in Britain having as yet no prominent advocates, but rather, as Bp. Van Mildert styles them in his *Life of Waterland* (p. 37), 'importers of foreign novelties.' Perhaps the best known English work advocating Arianism in the 17th cent. was the *Naked Gospel*, by Dr. Bury, rector of Exeter College (Oxford, 1690). In the same year, Dr. Sherlock, dean of St. Paul's, published his *Vindication of the Doctrine of the Holy and Ever-blessed Trinity*, in which, following some suggestions made by Cudworth, he maintained views which were denounced by South with his customary vehemence as countenancing Tritheism. Sherlock's opinions were condemned by the Vice-Chancellor and heads of houses at Oxford, who declared that it is 'false, impious, and heretical, contrary to the doctrine of the Catholic Church, and especially of the Church of England, to say "that there are three infinite, distinct minds and substances in the Trinity, or that the three Persons are three distinct infinite minds or spirits"' (Appendix to Dorner, by Patrick Fairbairn).

23. Professor Gwatkin in his *Gifford Lectures* ('Knowledge of God,' ch. xvii.) says incisively: 'Arianism is one of the most modern of the old heresies strangely English in its impatient common sense.' And it was in the England of the 18th cent. that the controversy revived.

'A variety of circumstances combined to give this turn to religious thought in England. The reaction from Puritanism, now that the tide of fortune had set in so powerfully against it and scope no longer existed for mental energy in that direction, was alone sufficient to account for it. . . . Partly springing, too, from the same reaction, and inspired by other influences, a philosophy came into vogue, heralded by Cudworth but properly founded by Locke, which in its bearings on morals and religion was peculiarly cold and rational. . . . Reason with this school of philosophical divines was placed in a sort of antagonism to faith; as the one element rose the other fell. . . . With those who still maintained a certain belief in Christianity, the prevailing spirit chiefly operated in disposing them to rob it of its more distinctive features, and, as regards the specific subject of our Lord's Person, led them either to reject altogether the doctrine of His divinity, or, with the Arians, to hold it but a quasi-divinity—something of an essentially subordinate nature to that of the Father' (Appendix to Dorner, *Person of Christ*, p. 350 ff.).

The two English divines properly deserving of the name of Arians were William Whiston, who succeeded Sir Isaac Newton in the chair of Mathematics at Cambridge, and his friend Dr. Samuel Clarke. Whiston was a man of high attainments, marred by many eccentricities. His study of Christian documents led him to place the *Apostolical Constitutions* on a par with the Gospels, and to choose Eusebius of Nicomedia as the exponent of the true tradition of Christian doctrine. He repudiated the name of Arian, but his outspoken utterances caused him to be deprived of his professorship. His more cautious friends, among them Benjamin Hoadly, rose to the highest and

most lucrative positions in the Church of England (Abbey and Overton, *The English Church in the Eighteenth Century*, vol. i. p. 490 ff.). Dr. Samuel Clarke, Rector of St. James's, Piccadilly, London, in 1712 published his *Scripture Doctrine of the Trinity*, in which no fewer than 1257 texts were cited and examined, with the result that the Father was declared to be alone Supreme, the Son Divine only so far as Divinity is communicable by the Supreme God, and the Holy Spirit inferior to the Father and the Son, not in order only, but also in dominion and authority. This avowed Arianism (for it was pointed out that of the fifty-five propositions advanced by Dr. Clarke there was only one to which an ancient Arian could not have subscribed) was the signal for an important controversy in England. The chief supporters of the new Arianism were Dr. Whitby and Mr. John Jackson, rector of Rossington and vicar of Doncaster. Clarke's work was condemned by Convocation in 1714; but the dispute was not thereby silenced, and in 1719, Dr. Waterland, archdeacon of St. Albans, published an answer to Jackson in his *Vindication of Christ's Divinity*. In the long war of pamphlets which followed, Waterland was conspicuous alike for basing his doctrine on Scripture alone and for the respect he showed for the Fathers. The Arian dispute in England marks, indeed, the close of the age when the Fathers were confidently appealed to in theological disputes. Nor was the Church of England alone disturbed by the question, since from the time of Emlyn's condemnation in Dublin (1702) and his expulsion from his church, the Nonconformists were disturbed by the presence of Arianism, which culminated in the Salters Hall Conference in 1718 between Presbyterians, Baptists, and Congregationalists. The Arianism of the early 18th cent. was succeeded by anti-Trinitarianism; and the subordinationist theories of the first decades gave way to more distinctly Unitarian doctrines, the discussion of which is scarcely within the scope of the present article.

For English Arianism see Nelson, *Life of Bull*, 1713; Van Mildert, *Life of Waterland*; Whiston, *Memoirs*, 1749–50; the Appendix to Dorner's *Person of Christ* (Eng. tr. 1865–68); Abbey and Overton, *English Church in the Eighteenth Century*, 1878, ch. viii.; Sykes, *Anti-Trinitarian Biography*; Dale, *History of Eng. Congregationalism*[2], 1907.

24. As a philosophy of religion, Arianism struck a blow not only at the root of the Creed, but at the whole principle of Scriptural revelation. 'Is,' asks Harnack at the beginning of his chapter on the subject (*op. cit.* vol. iv. Eng. tr.), 'the Divine, which appeared on the earth and has made its presence actively felt, identical with the supremely Divine that rules heaven and earth? Did the Divine which appeared on earth enter into a close and permanent union with human nature, so that it has actually transfigured it and raised it to the plane of the eternal?' The OT teaches that the One True God revealed Himself, in part at any rate, to Israel; and the NT supplements this by showing that humanity is made one in the Christ (ὁ Χριστός), and by this is brought into complete harmony with the God and Father of All. Arianism declared God to be unknowable, and the Son completely detached from Him. Humanity can therefore never be brought by Christ to the truly Divine, but only to a sort of pseudo-divinity created in the Son by the Father. Such an evacuation of the purpose of the Christian revelation has always been repudiated whenever the doctrine is presented in its crude form. But we must carefully distinguish between the logical results of such a system as Arius propounded and the opinions of those who have upheld it. Arius himself, in his dread of Sabellianism, may have advanced a theory of the Trinity without consideration of all that it involved. As a matter of fact, he was ready in later life to subscribe to a creed approximating to that of Nicæa. Of his opinions the famous Unitarian Dr. Priestley rightly says in his *Church History* (vol. ii. p. 189): 'Nay, the proper opinions of Arius, viz., that the Son was made out of nothing, and that there was a time when He did not exist, were really adopted by very few. So that what we call Arianism arose much later and spread much less rapidly than has been generally imagined.' The Arian Controversy resulted, however, in bringing forward two conclusions of which Christians had to choose one. If Jesus Christ existed from eternity, and is Head of a Kingdom which shall have no end, if He is indeed to be worshipped and received as God, then the Nicene doctrine is true, and He is of one substance with the Father. Otherwise, Christians have been mistaken from the first in their conception of Him, and He is not Divine, but a creature; not eternal, but belonging to time: either, as Arius suggested, a second God, using the term 'God' in its looser polytheistic sense, or, as the Unitarians maintain, a mere man eminent for goodness, but subject to human limitations, and unable to bring those who trust in Him to peace and communion with the Father. It is not without significance that Socinus expressly denied the doctrine of atonement through Christ.

F. J. Foakes-Jackson.

ARISTOTLE, ARISTOTELIANISM. — 1. Life.—Aristoteles—son of Nicomachus, friend and physician of Amyntas, king of Macedonia—was born B.C. 384 at Stagira or Stagirus, a city of Chalcidice. In his eighteenth year (367) he came to Athens and joined the Academy, of which he continued to be a member, learning and teaching, during twenty years. Tradition relates that he taught rhetoric in opposition to Isocrates. That is to say, whereas at this time the school of the politico-rhetorical sophist Isocrates and the Academy, the school of Plato, were rival colleges, Isocrates was professor of rhetoric in the one, Aristotle in the other. In 347, when Plato died and his nephew Speusippus succeeded him as scholarch, Aristotle and Xenocrates, on the invitation of Hermias, lord of Atarneus and Assos, who was himself an Academic, betook themselves to his court. After a three years' residence there, Aristotle removed to Mitylene; and about this time, after the death of Hermias, he married Pythias, a near relative of his friend. In 343 Aristotle received and accepted a call to the Macedonian court to undertake the education of Alexander, then thirteen years old. This task occupied him during three years (343–340). A stay at Stagira followed; and it was not till Alexander had ascended the throne, and was about to start on his Asiatic expedition, that Aristotle finally left Macedonia. Meanwhile, in 339, Speusippus had died, and Xenocrates, after a contest with Heraclides Ponticus and Menedemus, had succeeded him as head of the Academy.

In 335 Aristotle returned to Athens and founded a school of his own in the gymnasium known as the Lyceum. There he spent twelve busy years, teaching in the morning a select class of advanced students, and in the afternoon a larger audience. From his habit of walking to and fro as he discoursed, the members of the school were called Peripatetics (Περιπατητικοί). Towards the end of this period of twelve years he lost the favour of Alexander, whose jealousy of Antipater and suspicion of Callisthenes prejudiced him against their friend and correspondent. Nevertheless, when Alexander died in 323, the anti-Macedonian party at Athens vented their spite against Aristotle in a charge of 'impiety.' The accusation, based upon a

hymn to virtue, in which he was alleged to have represented Hermias as a god, was plainly frivolous; but Aristotle prudently left Athens and retired to his house near Chalcis in Eubœa. There he died in the summer of the following year (322). The story that he committed suicide by drinking hemlock or by drowning himself in the Euripus appears to have no foundation. Dr. Waldstein in 1891 opened a tomb near Eretria which he supposes to be that of the great philosopher.

2. Writings.—Cicero extols 'the golden stream of Aristotle's discourse'; Quintilian, its 'grace and fertility'; and Dionysius of Halicarnassus, its 'force, clearness, and grace.' These praises must needs refer to Aristotle's published writings, and, in particular, to his *Dialogues*, of which only fragments have come down to us. The philosophical writings, upon which his fame rests, are wholly deficient in literary quality. The style is curt, abrupt, jejune. The language is careless and conversational. The exposition is sometimes incomplete, sometimes redundant, sometimes inconsistent. There are reminders, recapitulations, revisions. Arguments are sometimes indicated without being worked out; inquiries which are promised are sometimes tacitly dropped. In a word, these writings, which have so profoundly impressed the thought of many centuries, would seem to be neither completed and published works nor text-books for use in the school, but informal records of oral teaching addressed to a few advanced pupils. In this way, and perhaps in this way only, are explicable the rough and ready terminology, the diagrams and examples, the references to the furniture and the decorations of the lecture-room and to members of the class, the occasional sentences which have no beginning, and, in one instance, the peroration addressed to an audience. But if these are records of oral teaching, some of them more completely finished than others, by whom were they prepared? Are they Aristotle's notes made with a view to his lectures? Are they notes of his teaching made by his hearers? Are they compilations made by an editor who had before him both Aristotle's notes for lectures and his hearers' notes of them? In the opinion of the present writer the treatises which have come down to us are in the main the notes of Aristotle himself. If they were the notes of pupils, and, *a fortiori*, if they were compilations, much of the roughness and the obscurity would have disappeared.

For example, in *Metaphysics*, A iii. 1069^{b} 35 and 1070^{a} 5 the words μετὰ ταῦτα ὅτι would not have survived, and in A ix. 990^{b} 11–15 we should not find indications of three Platonic arguments and Aristotle's objections to them packed into four lines. It would seem that Aristotle's notes, made for his own use and supplemented and corrected by himself, but never revised for publication, were treasured in the school; so that we possess, not indeed always his last thoughts, but at any rate his thoughts; and the inconsistencies which trouble us prove only that his thinking was progressive.

The chief of the so-called 'acroamatic' treatises attributed to Aristotle may be classified under their mediæval titles as follows:—

i. Logic: the *Organon*, including *Categoriæ*, *de Interpretatione*, *Analytica Priora*, *Analytica Posteriora*, *Topica*, *de Sophisticis Elenchis*.
ii. Physics: *Physica* or *Physicæ Auscultationes*, *de Cœlo*, *de Generatione et Corruptione*, *Meteorologica*.
iii. Biology: *Historiæ Animalium*, *de Partibus Animalium*, *de Incessu Animalium*, *de Generatione Animalium*, *de Anima*, *Parva Naturalia*.
iv. Philosophy: *Metaphysica*.
v. Ethics and Politics: *Ethica Nicomachea*, *Ethica Eudemia*, *Magna Moralia*, *Politica*, *Œconomica*.
vi. Literature: *Rhetorica*, *Poetica*.

It is not possible to speak with any certainty about the chronology of these writings; for there can be no assurance that references from one to another are Aristotle's and not the additions of editors. But we know that the collection of treatises from which we gather Aristotle's ontology was early placed after the treatises on Natural History: for this, and no more, is implied in the title τὰ μετὰ τὰ φυσικά, whence we derive our convenient misnomer 'metaphysics.'

Besides the 'published works' (ἐκδεδομένοι λόγοι), and the 'lectures' (ἀκροαματικά), there were also 'memoranda' (ὑπομνήματα). Under this last head may perhaps be placed certain summaries of the teaching of philosophers, the προβλήματα, and the πολιτεῖαι, *i.e.* notices of the constitutions of 158 political communities. The recently discovered Ἀθηναίων πολιτεία appears to have contained (1) a brief constitutional history of Athens and (2) a citizen's handbook; but the want of proportion obvious in the former of these two sections suggests that it was a compilation, made by some member of the school, from extracts and documents which Aristotle had casually collected.

Strabo and Plutarch relate that Aristotle's library, including his own writings, became the possession of Theophrastus, and after his death passed into the hands of Neleus of Scepsis in the Troad; that his heirs, for fear of the lords of Pergamos, hid them in a cellar; that about B.C. 100 Apellikon bought them and brought them to Athens; and that in 86 they came into the hands of Sulla, and so became known to the grammarian Tyrannion, whose copies were the basis of an edition prepared about 70 by Andronicus of Rhodus, the eleventh scholarch. This curious story is probably true; but it must not be taken for granted either that the school had no philosophical library or that its library did not contain copies of Aristotle's principal writings.

3. Philosophical system.—We have seen that Aristotle entered the Academy and continued to be an active member of it during twenty years. In later life he still regarded himself as an Academic; for even when he is criticizing certain of Plato's tenets, he speaks of them as doctrines which *we* hold. Indeed, it would appear that, had he been at Athens in 339, he might have succeeded Speusippus as head of the School; for in the list of scholarchs, it is expressly noted that when Xenocrates was elected, 'Aristotle was in foreign parts.' But though an Academic, Aristotle cannot be regarded as a Platonist. The master and the pupil differed fundamentally in their attitude towards inquiry, Plato taking his departure from that which is eternal, Aristotle from that which is actual in time and space. Yet, in spite of this disagreement, they were at one in resting their schemes of scientific research upon the assumption that there are in Nature determinate kinds of species, which may be studied in their resemblances and their differences. After all, Aristotle had more sympathy with Plato than Speusippus, a biologist who assumed the existence of natural kinds without attempting a metaphysical explanation of them; and more appreciation of Plato than Xenocrates, a moralist, who, when he ventured into Platonic metaphysics, was soon out of his depth; and whereas Speusippus dropped the theory of Ideas, and Xenocrates blended it with Pythagorean fancies, Aristotle was, at any rate, careful to formulate his dissent. In a word, Plato propounded an idealist ontology and rested upon it a theory of natural kinds, which should be the basis for the study of cosmic existences; Aristotle, rejecting the idealist ontology, proceeded to restate the theory of natural kinds, resting it upon an ontology of his own. The criticism of his master's idealism is indeed Aristotle's starting-point, and for this reason it will be convenient, in the present account of Aristotle's system and encyclopædia, to give precedence to 'First Philosophy' (πρώτη φιλοσοφία) or 'Theology' (θεολογική).

(1) *First Philosophy.*—There are, thought Aristotle, four principal lines of inquiry, having for their ends the discovery of four causes (αἰτίαι) or principles (ἀρχαί). These causes or principles are the *material* cause (ὕλη), the *essential* cause (οὐσία, τὸ τί ἦν εἶναι), the *moving* cause (ἀρχὴ τῆς κινήσεως), and the *final* cause (τὸ οὗ ἕνεκα, τέλος). Apart from

accidents or attributes which are not common to all the members of a natural kind, each of its members is, in thought though not in fact, resolvable into a specific soul or life, which is its form, and an appropriate body, which is its proximate matter. But again, the body is resolvable, in thought though not in fact, into organs and constituents. Further, these constituents are compounds of the four elements—fire, air, water, and earth. Finally, fire, air, water, and earth have for their ultimate matter a purely indeterminate potentiality which is the recipient of four primary qualities—hot and cold, wet and dry: fire is the combination of hot and dry; air, that of hot and wet; water, that of cold and wet; earth, that of cold and dry. The ultimate matter of the member of a natural kind is then a potentiality, in virtue of which that member exists in time and space: its form is the sum of its specific characteristics, in virtue of which it is what it is. What we can know of the member of a natural kind is its specific characteristics. Anything which is peculiar to an individual member or to individuals is not known but perceived.

Such is Aristotle's analysis of the particular member of the natural kind. It may serve as a statement of the aims which he has in view in his classificatory researches; but it leaves the adaptation of body to soul, the organization of body, and the differentiation of species wholly unexplained; and when he tells us vaguely that 'Nature' works always to an end and 'does nothing at random' (*οὐδὲν ἀτελὲς* [or *μάτην*] *ποιεῖ ἡ φύσις*), it is plain that 'Nature' is no more than a *deus ex machina*.

For the proximate moving cause, by which the particular member of a natural kind is brought into existence, Aristotle looks, not to any transcendental cause eternally operant, but to a previous member of the species which in its maturity transmits the specific characteristics to its offspring. This principle is expressed in the formula 'man generates man' (*ἄνθρωπος ἄνθρωπον γεννᾷ*). The final cause, the end sought, is the maintenance of the species. For though, under the influence of the sun as it approaches and recedes in its apparent progress through the signs, the life of the particular animal or vegetable waxes and wanes and ultimately ceases, Nature is 'careful of the type.'

It is necessary, however, to account not only for the existence of the animal and vegetable kinds, but also for that of the earth and the heavenly bodies, and for their motions, especially if, as the use made of the sun suggests, animal and vegetable life is to be dependent upon them. For this purpose Aristotle postulates (*a*) a prime unmoved movent (*πρῶτον κινοῦν ἀκίνητον*), eternal, existent, essentially operant, exempt from matter, and (*b*) other unmoved movents (*κινοῦντα ἀκίνητα*). The prime unmoved movent, with the other unmoved movents, attracts (*κινεῖ ὡς ἐρώμενον*) the material universe, and so causes to rotate the spheres which are necessary to account for the motions of the earth and the heavenly bodies. Of such spheres Eudoxus had postulated 26, Callippus 33; Aristotle finds 55, or at any rate 47, necessary. The prime unmoved movent is mind (*νοῦς*), which, with itself for object, thinks continually (*ἐνεργεῖ ἔχων*), and is conscious of its thinking (*ἡ νόησις νοήσεως νόησις*). The other unmoved movents, though Aristotle does not say it, must needs be the thoughts of the prime unmoved movent. For, at the end of Metaphysics Λ, criticizing Speusippus on the ground that his system makes the universe 'episodical,' Aristotle adds epigrammatically: 'Real existences refuse to submit to a bad constitution: as Homer says, a plurality of kings is bad; let us have one king.' Plainly Aristotle supposes himself to escape this condemnation: and so he does, if the other unmoved movents are the thoughts of the prime unmoved movent; for 'mind and its thoughts are one and the same' (1072^{b} 21, 1075^{a} 3).

Such is the substance of Aristotle's *First Philosophy*. But *First Philosophy* is also a 'Theology.' The mind, the prime unmoved movent, which, with its thoughts, the unmoved movents, originates and maintains the orderly motions of the earth and the heavenly bodies, is emphatically described as God; and, simple as his language is, Aristotle seems to be moved beyond his wont when he writes: 'It is wonderful that God should have always an excellence which we have sometimes: that he should have a greater excellence is still more wonderful. But so it is.' 'God is perfect: he has life, continuity of existence, eternity of existence; that is what God is.' 'He is one; and therefore the firmament which he sets in motion is one.' 'The belief in a Divinity which invests the whole of Nature goes back,' Aristotle adds, 'to remote antiquity; but, for the persuasion of the many and in the service of the law, an anthropomorphic mythology has been built upon it. Strip away the accretions, and then "first existences are gods" is a divine word.'

The lacunæ in the system here described are obvious. In particular, we desiderate an explanation of the part played by 'Nature'; and the omission is the more startling because we find Aristotle endeavouring to bring his scheme of unmoved movents into relation with the contemporary astronomy. His chief care was perhaps to show the possibility of resting the theory of natural kinds on a metaphysical system other than that of Plato. According to Plato, everything is directly or indirectly the thought of universal mind. Fire, air, earth, and water are its geometrical conceptions of space. The stars are modes of life implanted by it in fiery spheres. Animals and vegetables are modes of life, conceived by universal mind, but combined by the stars with bodies appropriately fashioned out of the elements. The particular member of an animal or vegetable species is a phenomenal copy or reflexion, in appropriately corporealized space, of the transcendental idea. Aristotle's immanent form received from the previous member of the species corresponds to Plato's phenomenal copy or reflexion of the Idea; Aristotle's Nature's design corresponds to Plato's Idea. The truth is that there is little difference between the two analyses when once it is understood that Plato emphasizes the transcendental idea at the expense of the immanent reflexion, and that Aristotle emphasizes the immanent form at the expense of Nature's design. But the fact always remains that, whereas Plato regarded matter also—that is to say, space—as the creature of universal mind, and so was a monist, Aristotle distinguished matter—that is to say, potentiality—from supreme mind, and was therefore a dualist.

In the *Metaphysics*, Aristotle's answer to the question, What is the primarily existent (*τὸ πρώτως ὄν*)?, is to the following effect. It is not the receptive substratum called 'matter,' because, being purely potential, matter is not actually anything. It is not a mere universal (*καθόλου*), for the common characteristic or characteristics by which species are artificially combined in a genus, and particulars within a species are artificially combined in a group, *make* the genus or the group, and are not resemblances and differences discovered by comparison of species made by Nature. It is not the particular in which form and matter are combined, for with matter come in accidental attributes peculiar to individuals. It is the form and nothing but the form; that is to say, it is the sum of the charac-

teristics of the species to which the particular belongs. Such is the doctrine of *Metaphysics* Z. Nevertheless, in the *Categories*, primary existence is ascribed to the particular or composite of form and matter. The inconsistency is one of terminology and not of thought. For the specific form which is the primary existence of the *Metaphysics* exists only in the members of the species; and the primarily existent particular of the *Categories* is known only in so far as it represents the species to which it belongs. Aristotle coined many technical terms; but he allowed himself a large licence in the use of them, and he was not always careful to harmonize the terminology of one treatise with that of another. In this case, the terminological discrepancy is unfortunate; but, in the opinion of the present writer, it is a mistake to infer from it either confusion or vacillation.

(2) *PSYCHOLOGY*.—The conception of mind, exempt from matter, reappears in the *Psychology* (*περὶ ψυχῆς*). In this treatise Aristotle begins with a review of previous and existing opinion, from which it appears that some had regarded soul exclusively as the organ of motion, others exclusively as that of sensation and cognition. For himself, he proposes to include under this name all activity, which, whether manifested or not, is implicit in living body, and distinguishes living body from body which is lifeless. (Perhaps this is all that Aristotle meant in the first instance by defining soul as 'the first actuality of a natural organized body' [*ἡ πρώτη ἐντελέχεια σώματος φυσικοῦ ὀργανικοῦ*]; but when he adds that, while soul is actuality of body, body is not actuality of soul, the definition becomes a declaration of soul's supremacy.) Having thus widened the scope of psychology, Aristotle proceeds to enumerate the faculties of soul. Nutrition (together with generation), sensation, appetition, locomotion, intellection, follow one another in this order; and the possession of a higher faculty implies that of all the faculties below it. The soul of plants is nutritive only. The soul of animals is not only nutritive, but also sensitive, appetitive, motive. The soul of man has all the faculties of animals, and is intellective also. In sensation the form of the sensible, without its matter, reaches the sense through an intervening medium; and the sense perceives the sensible in virtue of the change which the advent of the sensible brings about in it. Hence, when subject and object are in the like condition, there is no sensation; and when the sensible is in excess, the organ may be deranged or disabled. Touch is the primary sense. Besides the five special senses, Aristotle recognizes a common or central sense, which (*a*) is conscious of sensation, and (*b*) distinguishes and co-ordinates the impressions received by the special senses. Its organ is the heart. So far we have been dealing with faculties which man shares with the animals. Passing next to reason—the faculty which belongs distinctively to man—Aristotle distinguishes a passive reason (*παθητικὸς νοῦς*), which receives from the senses their impressions, and an active, constitutive reason (*ποιητικὸς νοῦς*), which provides forms of thought for the interpretation of the impressions received from the senses. Such is the function of the active reason in the individual; but it and it alone of the psychical faculties may exist apart from soul and from body. When it exists apart, 'independent of external objects, having no inessential attributes, essentially operant,' and 'only when it so exists,' it is immortal and eternal. Now the active reason, as thus conceived, is the prime unmoved movent, the God, of the *Metaphysics*. In so far as man possesses this reason, it comes to him from without. Plainly the passive reason is interposed in order to bring the recepta of sense into relation with the divine faculty.

(3) *LOGIC*.—Of all Aristotle's achievements the greatest was perhaps the invention of *logic*. The group of treatises known as the *Organon* includes a formal logic, a theory of scientific research, a treatise on disputation, and a classification of fallacies. The formal logic comprises an enumeration of categories or heads of predication; a study of the quality, quantity, and conversion of propositions; a detailed investigation of the syllogism and its figures; and a careful discrimination between *adduction* (*ἐπαγωγή*), or generalization from known particulars in regard to those particulars, and *example* (*παράδειγμα*), or inference from known particulars in regard to unknown particulars, effected by ascent to an imperfectly certified *general* and subsequent descent from it. Within the limits of the *Organon*, Aristotle takes account at once of *dialectical debate*, by which the premises of demonstration are provisionally justified, of *demonstration*, by which the consequences of given premises are ascertained, and of *sophistry* or *eristic*, pursued irrespectively of truth with a view to argumentative success.

(4) *SCIENCE*.—While the formal logic still holds its ground, Aristotle's scientific writings were no more than stepping-stones. His physical speculations occupied the field for eighteen centuries; but they were never more than stop-gaps; and the time came when, by reason of his great name, they were positive hindrances to progress. His biological works are still praised for the observation, the insight, and the knowledge, of which they afford conclusive evidence.

(5) *ETHICS AND POLITICS*.—In the *Nicomachean Ethics* and the *Politics*, Aristotle raises and discusses anew the old question, What is man's chiefest good (*τὸ ἀνθρώπινον ἀγαθόν*)?, regarding it in the one, as the end sought by the individual, and in the other, inasmuch as man is a social animal and cannot realize himself except as a citizen, as the end sought by the city-State (*πόλις*). Thus the two treatises are contributions to the architectonic science of Politics (*πολιτική*); but the one (*ἠθικά*) is concerned with the 'character' of the individual, the other (*πολιτικά*) with the 'constitution' of the State.

All are agreed that man's good or end is well-being (*εὐδαιμονία*), that is to say, well-living (*εὖ ζῆν*) or well-faring (*εὖ πράττειν*); and man's well-being —the term 'happiness' should be avoided—is the satisfactory performance of those functions which are distinctively human. In a word, 'man's chief good or end is a psychical activity characteristic of an excellence (*ἀρετή*), or, if there are more excellences than one, characteristic of the best and completest of them, such activity being continued during a complete period of existence.' Setting aside nutrition and growth which man shares with plants, and sensation which he shares with animals, we find that man's distinctive functions are reason, reasoning, and the rational control of appetition, under which head are included desires and passions. What, then, are the excellences of these functions? And which of the excellences is the best and the completest? There are two sorts of excellence—moral excellence, the excellence which the appetitive part of soul displays when it is duly obedient to the rational part, and intellectual excellence, the excellence of the rational part. Moral excellence (or virtue) is 'a deliberate habit which enables the individual, with the help of his reasoning faculty—subject to an appeal to the man of practical wisdom —to attain what is for him the mean between vicious extravagances.' The principal moral virtues are courage, temperance, liberality, munificence, magnanimity or self-respect, gentleness, justice. The intellectual excellences are practical wisdom or prudence (*φρονησις*), the excellence of that subdivision of the rational part of soul which controls

the appetitive part, and speculative wisdom (σοφία) the excellence of that purely intellectual part which is called reason (νοῦς). Practical wisdom and the moral virtues must be developed *pari passu*. Now, reason is obviously the best part of the soul, and therefore its excellence, speculative wisdom, is the best of excellences. This best of excellences has for its activity (ἐνέργεια) study (θεωρία). Consequently, the completest well-being of the individual is to be found in the life of the student (θεωρητικὸς βίος), who, however, must loyally do his duty as a member of the city and the family. This completest well-being brings with it the highest of pleasures. Next to the life of the student ranks the practical life of moral virtue. For the production of excellence, three things are requisite: first, natural aptitude; secondly, instruction, for its guidance; thirdly, habituation, to establish the habit. Inasmuch as well-being implies not merely the possession of a habit, but also its exercise, we require for the realization of well-being those external goods upon which the exercise of the habit depends. The doctrine that well-being implies the exercise of a habit and not merely the possession of it, and the corollary that external goods are indispensable conditions, distinguish Peripatetic from Academic ethics.

As in the *Ethics* Aristotle is concerned with the well-being of the individual, so in the *Politics* he is concerned with the well-being of the community. The city (πόλις) is a complex organism, developed out of the village (κώμη), which again has its origin in the patriarchal family (οἰκία). Right polities (ὀρθαὶ πολιτεῖαι) are those in which the sovereign (κύριος)—whether one, few, or many—rules for the benefit of the community; perversions (παρεκβάσεις) are those in which the sovereign—whether one, few, or many—uses power for personal advantage. The right polities are aristocracy, monarchy, polity proper; the perversions are democracy, oligarchy, and tyranny. The best of cities would be one in which absolute power was exercised for the benefit of all the citizens by one person, or more persons than one, superior to the rest in mind and in body. But we cannot hope to find rulers thus exceptionally qualified, and accordingly monarchy and aristocracy must be regarded as unattainable ideals. Thus of the three right polities one alone remains, namely, polity proper, in which all free men are admitted to a share in the administration and at the same time submit themselves to the 'passionless intelligence' of law. Of all polities this is, in Aristotle's estimation, the most stable; for inasmuch as all in turn rule and are ruled, the middle class has a preponderant influence. For the maintenance of polity proper, Aristotle would rely, as Athens did and as the United States do, upon supreme or constitutional laws (νόμοι), alterable only by special formalities, to which supreme or constitutional laws, upheld by courts of justice, all ordinary enactments (ψηφίσματα) must conform. Of the three perversions—democracy, oligarchy, tyranny—democracy, which has the smallest power for evil, is the least bad; tyranny, in which such power is greatest, is the worst. Tradition places at the end of the treatise a fragmentary scheme for a perfect State; but, unlike Plato, Aristotle had no hope of its realization. In the intervening books, on the strength of a careful study of known constitutions, Aristotle inquires what sorts of constitution are suitable to given sorts of people; how a constitution may be established and maintained in accordance with given assumptions or conditions; what is the best constitution for the generality of States; what circumstances tend to change, to overthrow, and to maintain the several constitutions. The reader of the *Politics* must not forget that, on the one part, the citizen population of a Greek State was very small, so that Aristotle knew nothing of representative government; and that, on the other part, the number of slaves was, in comparison with the number of free men, very great, so that what he calls a democracy was in some sort an aristocracy.

In these two treatises, the *Nicomachean Ethics* and the *Politics*, Aristotle is an acute and judicious student of human nature. They have a Shakespearean quality which makes them perennially interesting. But it must be clearly understood that they do not pretend to offer a theory of morality. Aristotle says nothing about the Good, about Duty, about the distinction between Right and Wrong; and very little about the faculty which discriminates them. Moreover, inasmuch as he concentrates his attention in the *Ethics* upon the well-being of the individual, and in the *Politics* upon the well-being of the State, the relations of man to man and of citizen to citizen are insufficiently handled. Indeed, they find a place, and that a subordinate place, only in so far as the particular virtues of justice and friendship are concerned with them. In a word, Aristotle works upon the lines of Plato's *Republic*.

In the *Eudemian Ethics*, which is now generally regarded as a summary prepared, *mutatis mutandis*, by Aristotle's disciple Eudemus, the line of argument is similar to that of the *Nicomacheans*. But (*a*) Eudemus chafes under the limitations of the inquiry, and would fain seek an explanation of moral differences; (*b*) regarding pleasure, not as the concomitant of an energy, but as identical with it, he sees in εὐδαιμονία the best of pleasures; and (*c*) abandoning the distinction drawn in the *Nicomacheans* between the activity of the student and the activity of the man of the world, he finds man's well-being in a life of culture (καλοκαγαθία) which combines both. It would appear that Aristotle himself, when he was writing the *Politics* (see IV. [VII.] iii. 1325^{b} 14), had learnt to regard statesmanship as a proper subject for scientific study. In the opinion of the present writer, Books v. vi. vii. of the *Nicomacheans*, which appear also as Books iv. v. vi. of the *Eudemians*, belong to the *Eudemians*, which they resemble both in their doctrine and in their style.

(6) *RHETORIC, ETC.*—In the *Rhetoric*—a treatise on oratory and style, apparently framed on lines marked out by Plato in the *Phædrus*—and in the fragmentary *Poetics*, Aristotle shows himself a literary critic of a high order. In particular, his appreciations of the tragedians have a permanent value. Perhaps no literary judgment has given rise to more controversy than the remark that tragedy, 'by raising pity and fear, purges the mind of those passions.' This theory of the 'homœopathic purgation' effected by tragedy (see Milton's Preface to *Samson Agonistes*) is Aristotle's answer to Plato, who in the *Republic* condemns tragedy as an incentive and stimulus to mischievous emotions.

The greatness of Aristotle was not fully understood until the Middle Ages, when the Church borrowed from him the framework of its theology, when the whole of civilized Europe saw in his encyclopædic writings the summary of the sciences, and when Dante hailed him as 'the master of those who know.' In the present article no more has been attempted than to describe in outline the philosophy upon which the schoolmen built, and to indicate the scope of Aristotle's labours. See, further, SCHOLASTICISM.

LITERATURE.—The following editions of Aristotle's writings deserve special mention: Bekker, *Opera Omnia*, 5 vols., Berlin, 1831–70; Pacius, *Organon*, Frankfort, 1592; Waitz, *Organon*, 2 vols., Leipzig, 1844–6; Aubert and Wimmer, *Historia animalium*, 2 vols., Leipzig, 1868; Hicks, *de Anima*, Cambridge, 1907; Bonitz, *Metaphysica*, Bonn, 1848–9; Bywater,

Ethica Nicomachea (text), Oxf. 1890; Stewart *Ethica Nicomachea* (commentary), Oxf. 1892; Newman, *Politica*, 2 vols., Lond. 1887; Spengel, *Rhetorica*, 3 vols., Leipz. 1853–6; Cope, *Rhetorica*, 3 vols., Camb. 1877; Butcher, *Poetica*^{2}, Lond. 1898; Bywater, *Poetica*, Lond. 1898. For Aristotle's philosophy see Zeller, *Die Philosophie der Griechen*, Eng. tr., Costelloe and Muirhead, 2 vols., Lond. 1897; Gomperz, *Griechische Denker* [Eng. tr., *Greek Thinkers*, Lond. 1901]; Ueberweg's *Grundriss der Geschichte der Philosophie* (Eng. tr., Smith and Schaff), contains, together with a useful summary of Aristotle's system, a very valuable bibliography. The Clarendon Press is now bringing out a series of English translations of Aristotle's writings.

The writer of the present article has occasionally used in it sentences and phrases borrowed from a sketch of the history of Greek philosophy down to Aristotle, which he contributed to the Cambridge *Companion to Greek Studies*.

HENRY JACKSON.

ARK.—In an inquiry into the nature and use of sacred arks, our interest centres chiefly in that which is familiar to us from the OT, the so-called Ark of the Covenant.

This name, which occurs in the Deuteronomistic literature, is not, however, the earliest one, older designations being apparently 'Ark of Jahweh,' 'Ark of God,' and 'Ark of our God.'* But the word 'God' (*'ĕlōhîm*), when used in the genitive, may have two meanings; *i.e.* it may be either possessive or adjectival, in the latter case denoting connexion not so much with the one true God as with the class or order of supernatural beings, the supernatural world. Accordingly the expression 'ark of God' may mean either 'God's ark' or 'ark connected with the supernatural world,' *i.e.* 'sacred ark.' In order to decide which of these two renderings is the correct one, we must inquire what name the writer uses to denote the Deity. If, like the author of Gn 1, he habitually uses the word *'ĕlōhîm*, then the phrase *'ărôn hā-'ĕlōhîm* may mean 'God's ark.' If, however, he habitually uses the name *Jahweh*, the only possible translation of the phrase is 'the sacred ark'; for a Hebrew, unlike an English writer, does not attempt to vary his style by the use of synonyms. In the case of an ark associated with the worship of Jahweh, the mere mention of the name of Jahweh would be sufficient to show the sacred character of the ark, and the simple phrase *'ărôn Jahweh*, *i.e.* 'Jahweh's ark,' would naturally be used.

To this theory the objection may be made that in two passages (1 S 3^3 and 4^{11}) *'ĕlōhîm* seems to be used as a *possessive* genitive, for an indefinite expression is not to be thought of in 4^{11}, and would scarcely be natural in 3^3. But the interchange of *'ĕlōhîm* and *Jahweh* as synonymous names of the Deity is so un-Hebraic that it is scarcely possible to imagine that the text has in these instances come down to us as it left the hands of the original writer. It is noteworthy that the messenger who in 1 S 4^{17} tells Eli the events previously recorded in 4^{11}, says *'ărôn hā-'ĕlōhîm*; it is therefore not impossible that 4^{11} is a late addition by a writer to whom *'ĕlōhîm* and *Jahweh* were interchangeable synonyms. Ch. 3 has undergone considerable editorial modification, for neither the dimness of Eli's eyes nor the fact that the lamp had not yet gone out has anything to do with the theophany to Samuel. In any case we are certainly not justified in setting aside a well-marked rule on the strength of these two passages.

What purpose would such an Ark or chest serve? Strange to say, there is no explicit statement on the subject in any very early passage of the OT, the assertion that the Ark was the receptacle of the Tables of Stone being first found in Dt 10. On the one hand, the oldest documents of the Pentateuch, J and E, in describing the Tables of Stone, make no mention of any receptacle for them; and, on the other, the oldest passages outside the Pentateuch which mention the Ark give no hint that it was regarded as a receptacle for a sacred Law, but imply rather that it was regarded as containing the symbol of Jahweh Himself. Thus, to quote Cheyne, 'the Ark was not a symbol of the revealed Law, but the focus of Divine powers.' The formula given in Nu 10$^{35.\,36}$, and similarly the account of the capture of Jericho, imply that the Ark was regarded as the visible symbol of Jahweh's presence. Still more striking is the narrative of the capture of the Ark by the Philistines. On hearing of its arrival in the camp of Israel, the Philistines exclaim (1 S 4^8), 'Who shall deliver us out of the hand of these mighty gods?' and the natural interpretation of 1 S 6^3 implies the virtual identification of the ark with Jahweh (cf. 6^{14}). Similarly, the language of 2 S 7^2, where David's dwelling in a house of cedar is contrasted with the dwelling of the Ark within curtains, appears more natural if the Ark was regarded as localizing the Deity* than if it merely contained the tables of His Law. It is noteworthy also that David's dance before the Ark is described as performed 'before Jahweh' (2 S 6^{14}).

* See Cheyne's art. 'Ark of the Covenant' in *EBi* i. 300.

Professor Cheyne (*EBi* i. 302) considers it probable that in the earlier form of the story of the Tables of the Law, as originally given in JE, the shattered tables were not renewed; but, whether this be so or not, the uncertainty which prevailed as to the code inscribed on the tables (cf. Ex 34 with Dt 5 and Ex 20), coupled with the absence of any mention in JE that the tables were placed in the Ark, or in any other book that they were ever taken out of it, makes it extremely probable that the statement in Dt 10 is merely an inference drawn by the Deuteronomic writer, who supposed, reasonably enough, that, an empty box being meaningless, the sacredness of the Ark must have been due to the sacred character of its contents. In this connexion, since his religion forbade him to think of any idol, the objects which would naturally occur to his mind would be the sacred Stone Tables.

It has been suggested that the Tables of Stone were originally *bætyls*, possibly meteorites, or, according to Professor G. F. Moore (*EBi* col. 2155), more probably 'a stone from the "mount of God," by taking which with them the Israelites were assured of the presence and protection of Jahweh when they wandered away from His holy mountain.' But of such *portable* stones we have no other example in Israel. Moreover, the difference between *tables*—*i.e.* hewn stones—engraved with a code of laws and *fetish stones* is so great that it is difficult to suppose that the latter could be the only basis for the story of the former. A discussion of the original form of the 'Ten Words' would be out of place in the present article; but it is by no means improbable that in early times the Law of Israel was summed up in ten sayings, and that these sayings were inscribed on two tables. The *form* of the sayings varied from time to time, the Decalogue of Ex 34 being superseded by that of Dt 5, and again by that of Ex 20; but the traditional number, ten, was retained. Since even the Decalogue of Ex 34, with its prohibition of idols, cannot be the earliest code, it is at least possible that subsequently to the reforms of Hezekiah, when the tables containing the earliest code were broken up by the iconoclastic zeal of 'Moses,' two fresh tables were hewn like unto the first, whereon was engraved a Decalogue (viz. that which forms the basis of the Law in Ex 34), similar to that which was on the first tables, but amended in harmony with the growing hatred of images.

But since there is nothing in any early document to connect the Ark with the stone tables, and since, when the first passage which does so connect it (Dt 10) was written, the Ark itself had long disappeared, we may safely disregard this comparatively late tradition, and seek in the earlier writings of the OT some indication of the purpose of the Ark.

There is no mention of the Ark in the Inventory of Temple furniture carried off by Nebuchadrezzar—an omission which cannot be due to lack of interest in the Ark, as is evident from Jer 3^{16}; it seems, therefore, necessary to suppose that it had disappeared before the destruction of the Temple. But, such being the case, we cannot but inquire the cause of its disappearance. It may, indeed, have been carried off in one of the invasions of Jerusalem, such as that of Shishak (1 K 14$^{25f.}$), or of Hazael (2 K 12$^{17f.}$), or of Sennacherib. But, great as are the gaps in the historical records of the OT, it is difficult to account for such an omission. The omission of the account of the destruction of the Temple at Shiloh is not quite parallel; for the editor who incorporated in his book an account of the capture of the Ark may have deemed it unnecessary to describe what, in his eyes, must assuredly have been of less importance, viz. the destruction of the sanctuary which had contained the Ark. At any rate, considering the fairly consistent tradition concerning the Ark in the books of Samuel and Kings down to the time of its deposition in the Temple of Solomon, and the utter absence of any mention of it thereafter till the 7th cent. references in J and E, which seem to imply that the exact nature, at all events, of its contents had been forgotten, we may fairly argue that it had disappeared in the interval, for it is surely unnecessary to assume a 'pious fiction' on the part of the Deuteronomic writer.

The precise description of the Ark given in the Priestly Code is not a proof that any of the sons of Zadok who were carried captive to Babylon had actually seen it. At the same time, there is no difficulty in believing that tradition had preserved a general description of its form, which was eventually idealized in the same manner as the Tabernacle itself and its furniture.

Attention has already been drawn to the fact that the early references to the Ark imply that it contained some symbol of Jahweh, and it is now

* The phrase יֹשֵׁב הַכְּרוּבִים (*e.g.* 1 S 4^4) suggests that the Ark was regarded as being in some way the abode or throne of God.

freely admitted that idol images of Jahweh were formerly common in Israel. It is natural, therefore, to regard the Ark as the portable shrine or receptacle of some such image, which upon this supposition must have been deposited by Solomon in the Temple of Jerusalem.* Have we any indication of the existence of such an image? The golden calves are not to be thought of, for there is no evidence that Jahweh was ever worshipped under this form among the Leah tribes; since it must be remembered that the original image at Dan, if it really was in the form of a calf—which is doubtful—was made not by Jonathan the Levite, but by Micah the Ephraimite.

But at Jerusalem there was an image of Jahweh to which sacrifice was offered, viz. the bronze seraph, or, to call it by the name by which it is generally known, the brazen serpent, which in the age of Hezekiah was believed to have been made by Moses (2 K 18^4; cf. Nu $21^{8.9}$), and may therefore be supposed to have been as old as the Ark. It is therefore a not unlikely inference that it was for this image that the Ark was made. It is noteworthy that these are the only two objects, traditionally connected with the worship of Israel in the wilderness, of the existence of which there is any evidence in the period of the Kings.† The traditions which assigned the making of the first golden calf and the brazen serpent to Aaron and Moses respectively are of the utmost importance; for the fact that the essential part of these traditions—viz. that images were made—survived even the iconoclastic commandments shows how deeply rooted must have been the traditions themselves. And if, as will be generally admitted nowadays, the narrative of Nu $21^{8.9}$ is the attempt of a later age to explain the origin of an object which seemed inconsistent with its iconoclastic law, and if the brazen serpent really was an image coming down from the time of Moses, or at least from the days of the Israelite conquest of Palestine, it is reasonable to suppose that the history of the brazen serpent was identical with the history of the Ark. But if the brazen serpent really existed in such an early period of Israelitish history (and both Nu $21^{8.9}$ and 2 K 18^4 agree in this respect), it must either have been carried off by the Philistines with the Ark or have been preserved by the priests who fled from Shiloh to Nob.‡ Of the latter alternative there is not the slightest hint; and it would have been strange if David had celebrated so joyfully the recovery of the Ark, and had disregarded an image which to subsequent ages, and presumably to David's own age, was an object of adoration.

If, as seems probable, we are right in concluding that the Ark and the brazen serpent shared the same vicissitudes, or, in other words, that the Ark *contained* the brazen serpent, we are at once able to explain both the existence of the latter in the days of Hezekiah, and the veneration shown to the former in the narratives of Joshua, Samuel, and Kings. And if the iconoclastic zeal of the reforming party in the days of Hezekiah destroyed the brazen serpent, the Ark, if this was the shrine of the serpent, would have shared the same fate.

Objection may perhaps be made to this theory, on the ground, first, that the narrative of Nu 21 implies an image which could not have been contained in the Ark; and, secondly, that it is the Ark itself which is always spoken of as sacred, no reference being made to its contents.

In answer to the first objection, it is sufficient to say that the conventional representation of the brazen serpent as twined about a pole is not necessitated by the language of Nu $21^{8.9}$, which merely states that, in order that the serpent might be visible, it was placed upon a standard (*nēs*, which is not necessarily a 'pole'; in Ex 17^{15} it is used of an altar).

The second objection appears more serious; but when we remember the awe with which serpents in general, and the brazen serpent in particular, were regarded, it is by no means unlikely that men spoke of the Ark because they shrank from mentioning the sacred object within it.

But the question may still be asked, Why should a box have been necessary at all, since there existed a tent in which to keep the idol? In the case of a large image (and the writer of 1 S $19^{13ff.}$ evidently thought of the *teraphim* as being the size of a man), a box would perhaps not have been necessary, though it might have been convenient for carrying the image about in time of war; moreover, the size of the Ark, of which the later tradition gives the dimensions as $2\frac{1}{2} \times 1\frac{1}{2} \times 1\frac{1}{2}$ cubits, would have been unsuitable to such an image. A comparatively small object, however, such as we must suppose the brazen serpent to have been, would certainly have needed some sort of case to preserve it when being carried about. But it is not improbable that the origin of the Ark may be due to another cause. The worship of a brazen serpent doubtless had its origin in the worship of a living serpent, for which some sort of receptacle would, of course, have been necessary. The conservatism of religious ritual would preserve this, even after the substitution of a metal serpent for a live one.

It is not necessary to suppose that a live serpent was reverenced in the time of Moses. The substitution of the metal image for so primitive a god may have taken place long before the age of Moses. There are, however, parallels which seem to point in this direction. Thus, on an amphora in the British Museum (*B. M. Cat.* E 418) there is a representation of the story of Erichthonios, which is reproduced by J. E. Harrison (*Prolegomena to the Study of Greek Religion*, 1903, p. 133): 'The sacred chest stands on rude piled stones that represent the rock of the Acropolis, the child rises up with outstretched hand, Athene looks on in dismay and anger, and the had sisters hurry away. Erichthonios is here a human child with two great snakes for guardians, but what the sisters really found, what the maidens really carried, was a snake and symbols like a snake.' Additional evidence for the same practice of carrying snakes in sacred chests is to be found in the class of coins known as *cistophoroi*, of which a representation is given by J. E. Harrison (*Prolegomena*, p. 400).

For the existence of snake-worship in Palestine, there was, until recently, no evidence apart from the OT. But in 1903 Mr. R. A. Stewart Macalister, in the course of his excavations at the Canaanite 'High Place' of Gezer, came across a circular structure '13 feet 8 inches in diameter at the floor level . . . surrounded by a rude wall now standing to a maximum height of 6 feet.' Within this structure, among a number of broken pieces of pottery, there 'was found a small bronze model of a cobra, rudely but unmistakably portrayed' (see 'Report on the Excavation of Gezer,' *PEFSt*, July 1903, p. 222). Although the discovery at Gezer did not include anything of the nature of an ark, it is not impossible that it may throw light on the *raison d'être* of the *prototype* of the Ark. Mr. Macalister's discussion of the place of the discovery is so suggestive that it may be quoted *in extenso*. 'The structure in which the serpent was found completely puzzled me, but an ingenious suggestion was made by Mr. J. Stogdon, of Harrow, when on a visit to the excavations—namely, that it was possibly a pit for keeping live serpents. The building is as suitable for such a purpose as the pits in which bears and other animals are kept in a modern zoological garden. In such a case the fine broken pottery and the bronze model might be in the nature of votive offerings. We are reminded of the practice of keeping live snakes at certain Greek shrines, notably at the temple of Æsculapius at Epidaurus, where they were in some way instrumental in effecting the miracles of healing there wrought (see Rouse, *Greek Votive Offerings*, pp. 193–205; see also p. 209). It is not inconceivable that among the orgies or rites which were celebrated in the high places of Palestine some form of snake-charming was included, and that the snakes required for the purpose were kept in this enclosure—perhaps specially prepared poisonous serpents with the fangs extracted. The tricks of modern holy men with serpents, which, if I be not mistaken, were described by Mr. Baldensperger in the *Quarterly Statement* some years ago, may be a survival of such rites' (*PEFSt*, July 1903, p. 223).

It is possible, however, that objection may be made to the view here put forth, that the Ark contained the bronze serpent, on the ground that the method of carrying the Ark is at variance

* On the other hand, it is urged by Schwally (*Semit. Kriegsaltertümer*, p. 10) that it is not necessary to suppose that the Ark contained anything.

† The mention of the holy vessels and the tables of stone in 1 K $8^{4.9}$ is due to the Deuteronomic editor.

‡ The only other alternative is to regard the brazen serpent as a distinctively Judæan idol, which existed in Judah long before David gained possession of the Ark. It is, however, to be noted that the story of the making of the brazen serpent is plausibly assigned to the Ephraimite writer E (see Carpenter and Battersby, *Hexateuch*, vol. ii. p. 222), while the reference to the Ark in Nu 14^{44} appears in its original form to belong to J.

with any such supposition. It is a safe inference from 1 S 6[7ff.], 2 S 6[3ff.] that the recognized method of carrying the Ark in early times was in a sacred cart (*i.e.* a cart that had been used for no other purpose) drawn by cows or bulls.* The use of horned cattle might possibly denote that the Ark was in some way connected with lunar worship; in any case, however, they probably imply that the god contained in the Ark was regarded as the god of fertility (see Frazer, *Adonis, Attis, Osiris*, pp. 46, 80).† At first sight it is difficult to suppose that a serpent could ever be regarded as a god of fertility, but whatever the origin of serpent-worship may be—and we need not assume that it has been everywhere identical—there can be little doubt that in some cases, at all events, it is celebrated with a view of ensuring fertility thereby. On this point the statement of the scholiast on the *Hetairæ* of Lucian, quoted by J. E. Harrison (*Prolegomena to the Study of Greek Religion*, pp. 121, 122), is very suggestive: ἀναφέρονται δὲ κάνταῦθα ἄρρητα ἱερὰ ἐκ στέατος τοῦ σίτου κατεσκευασμένα, μιμήματα δρακόντων καὶ ἀνδρῶν σχημάτων.

But whether the view here advocated that the Ark of Israel originally contained the brazen serpent be correct or not, it is at any rate certain that the Ark was the shrine or feretory of some object which symbolized Jahweh to His worshippers. On this point the evidence which we possess concerning similar arks among other peoples is conclusive (cf. Schwally, *Semit. Kriegsaltertümer*, p. 10). And as the sacred object was certainly not in every case a live serpent, we naturally inquire why it should be placed in a box, and not rather set on a pedestal or throne in a temple. The answer to this question is to be found in the conception of the god which prevails among primitive peoples, in whose minds the fetish or image is so identified with the spirit which is supposed to animate it that the two are indistinguishable. In times of need or danger man requires a god that is near, and not a god that is far off. It is by no means a primitive conception which we find in the dedicatory prayer put into the mouth of Solomon (1 K 8[44f.]), that, if people go out to battle against their enemy, and they pray to their God towards the house which is built to His name, He will make their prayer and supplication heard to the heaven in which He really dwells.* Primitive warriors wanted to have their gods in their midst. Of what use was the Divine Father (see Nu 21[29]) at home, when his sons were in danger in the field? It was but natural, therefore, that the gods should be carried out wherever their help was needed (2 S 5[21]; cf. Polyb., VII. ix. 2; Schwally, *op. cit.* p. 9).

Man is slow to give up idolatry. In the course of the ages, indeed, he modifies his primitive conceptions of God; the inanimate fetish gives place to the bestial form, and this again to an anthropomorphic representation, tending more and more towards the spiritual. But the truly spiritual conception of God, enunciated alike by the prophet Jeremiah (23[23. 24]) and by our Lord (Jn 4[21f. 24]), which is incompatible with local presence, seems ever to have been beyond the comprehension of the majority of mankind. Jeremiah's warning (3[16]) has been disregarded even by those who have called themselves Christians. At any rate, in the minds of many ignorant folk, the place of the gods of heathenism has been taken by the Saints, and the shrines containing relics of these have been venerated as being virtually dwelling-places of divinity. Between the mediæval reliance on the protection afforded by holy relics and the primitive Israelite trust in the Ark, there is but little real difference. In theory the mediæval Christian denied that his shrine contained a god, but his practice too often gave the lie to his theory.

R. H. KENNETT.

* The idea that the Ark could legitimately be carried only by hand may have arisen from the fact that it was so carried into Zion (2 S 6[13ff.]). There is no mention on that occasion of any priest other than the king himself. The account of the carrying of the Ark in the Book of Joshua belongs to a later development of the religion of Israel.

† A moon god and a god of fertility are not, however, incompatible conceptions (see Frazer, *Adonis, Attis, Osiris*, p. 297 ff. and cf. Dt 33[14]).

ARMENIA.

ARMENIA (Vannic).—The present article deals with Proto-Armenian religion as revealed in the Vannic or 'Khaldian' cuneiform inscriptions. The Indo-European Armenians, who are described by Herodotus (vii. 73) and Eudoxus (*ap.* Steph. Byz. *s.v.* Ἀρμενία) as immigrants from Phrygia, did not become masters of the Armenian highlands till the close of the 7th cent. B.C. Kretschmer (*Einleit. in die Gesch. der griech. Sprache*, pp. 209–11) brings them from Ormenion in Thessaly by way of Armenê, near Sinôpê (cf. Hirt, *Die Indogermanen*, 136; Prášek, *Gesch. der Meder und Perser*, i. 147). The name Armenia (Old Pers. *Armina*, New Sus. *Arminiya*) is first met with in the Bab. and Pers. cuneiform inscriptions of the Achæmenian age, and may be connected with the Vannic *armani*, 'written tablet.' The country had been previously known to its southern neighbours as *Urarṭu* (Heb. *Ararat*), which the Babylonian scribes explained as a compound of *Ura-Urṭu* or 'Highlands.' *Urṭu* is the name of the district near Lake Erivan in a Vannic inscription of Sarduris II. (Sayce, lxxxii. 6), though in the bilingual inscription of Topzawa *Urarṭu* is the Assyr. representative of the Vannic *Lulus*. The usual title assumed by the Vannic princes was 'king of Biainas' or 'Bianas,' the district in which their capital Ṭuspas (Tosp), the modern Van, was situated. Biainas is the Buana of Ptolemy (v. 13), now Van.

The Vannic inscriptions, which extend from about B.C. 840 to 640, are written in the cuneiform characters of Nineveh, but in a language which is neither Indo-European nor Semitic, and is believed by some scholars to be related to Georgian. It seems to have been spoken over the larger part of the later Armenia, and to have been connected with that of Mitanni in Northern Mesopotamia. Like the language, the religion of the Vannic population was peculiar, and is difficult to correlate with that of any other people.

At the head of the pantheon was Khaldis, whose children the Vannic kings and people regarded themselves as being in a special sense. Hence they called themselves 'the Khaldians,' a name also applied to the numerous local deities who were 'children of Khaldis.' But though Khaldis was the national god, he could be localized like the Semitic Baal, and we hear of a 'Khaldis of the north (?)' and a 'Khaldis of the south (?),' while a dedication is sometimes addressed to 'all the Khaldis-gods.' Along with two other divinities, Teisbas the Air-god (Assyr. Hadad-Ramman) and Ardinis the Sun-god, Khaldis was the member of a triad which occupied the supreme place in the

* The phrase וְיִשְׁמְעוּ הַשָּׁמַיִם אֶת־תְּפִלָּתָם וגו׳ has long been a crux to grammarians. We venture to emend the passage by pointing וְיִשְׁמַע (as *Pi'el*), and understand הַשָּׁמַיִם as the accusative of direction (cf. v. 30). The writer believes, like the prophet of Is 66[1], that 'heaven is God's throne,' but trusts that the prayers offered at the earthly sanctuary will be, as it were, made audible by the Lord at His heavenly throne. The quaintness of the expression is due to the writer's attempt to combine the phraseology of more primitive religion with his own spiritual faith.

Vannic divine hierarchy, and the conception of which may have been borrowed from Babylonia. Below the triad came the multitudinous deities of inferior rank, including even the 'Khaldis-gods,' or local forms of Khaldis. A long list of these, with the offerings to be made to them, is engraved on a rock called Meher Kapussi, two miles east of Van (Sayce, v.). Among them is Selardis the Moon-god, as well as the gods of various cities and countries incorporated into the Vannic kingdom by conquest or otherwise. Most of these deities were merely deified States, and consequently had no individual names of their own; it was only when they were within the limits of the district originally inhabited by the tribe whose supreme god was Khaldis that they properly became forms of the national god, and could be called 'Khaldians.' As the Vannic kingdom extended, however, and the idea of a common nationality grew stronger, the deified State, even if originally outside 'the land of Khaldis,' tended to pass into a Khaldis; thus the deity called at Meher Kapussi 'the god of the city of Ardinis' (the Muzazir of the Assyrians), became, a century later, in the time of Sargon, himself a 'Khaldis.' Only one goddess is mentioned in the inscriptions, and since her name, Saris, seems to have been borrowed from the Assyrian Ištar, it is possible that she was of foreign origin. The later (Armenian) legends which bring Semiramis into the plain of Van are possibly an echo of the fact.

How far Vannic religion, as it comes before us in the inscriptions, may have been influenced by Assyria or Babylonia it is impossible to say. Teisbas, however, who was afterwards united into a triad with Khaldis and the Sun-god, appears originally to have been the god of a tribe or nationality which was distinct from that of the Vannic 'Khaldians,' while among the neighbouring Hittites each city had its Sun-god, who was identified with the deified State. The conception of gods in the Assyro-Babylonian sense may have been due primarily to contact with the cultured lands of the south, like the titles 'lord of multitudes' and 'faithful shepherd of mankind' given to Khaldis. At all events, underneath the divine hierarchy of the official cult we find clear traces of an earlier phase of belief, in which the material fetish takes the place of the god. Sacrifices were made not only to Khaldis and his brother deities, but also to 'the gate of the land of Khaldis,' 'the gate of Teisbas in the city of Eridias,' 'the gate of the Sun-god in the city of Uisis'—all of which are carefully distinguished from 'the Khaldis-gods of the door' or 'the Khaldis-gods of the chapel'—as well as to 'the shields of the land of Khaldis,' and even to 'the foot-soldiers of the land of Khaldis' and 'the foot-soldiers of Teisbas' (Sayce, v. 13). These foot-soldiers were the temple-guards, armed priests, and attendants, who were called Seluians, Urbikans, etc. A prominent object of veneration was the vine, the sacred tree of the Vannic people, which was sometimes planted by the side of the temple of Khaldis (*ib.* v. 30, 31, lxxxvi. 10), sometimes in a sacred enclosure of its own. Sar-duris II., in one of his inscriptions (*ib.* li.), describes his endowment of one of these vines, which he had consecrated and named after himself on the north shore of the lake of Van. The vine was often planted in the middle of a garden which was attached to the temple. Spears and shields, specimens of which from Toprak Kaleh are now in the British Museum, were hung up on either side of the entrance to the temple, large basins of bronze or terra-cotta, on stands, being placed in front of the shrine for the purpose of ablution.

The endowments made to the temples usually took the form of provision for the sacrifices and offerings, which were numerous and plentiful. The great inscription of Meher Kapussi gives a long list of the sacrifices to be offered to each deity and sacred object recognized in the vicinity, on every day of the month. Thus 6 lambs were to be offered to the Vannic triad, 17 oxen and 34 sheep to Khaldis, 6 oxen and 12 sheep to Teisbas, 4 oxen and 8 sheep to the Sun-god, 1 ox and 2 sheep to the gate of the land of Khaldis, 2 oxen and 4 sheep to the foot-soldiers of the land of Khaldis. Libations of wine were also to be poured out, the wine being made, it would seem, from the fruit of the consecrated vines. Comparatively few, however, of the vast herds of oxen and sheep presented to the gods could actually have been offered in sacrifice; according to the inscription of Kelishin (Sayce, lvi.), when 'the gate of the land of Khaldis' was dedicated to Khaldis, 112 oxen, 9020 sucklings and lambs, and 12,490 sheep were presented to the god. Most of these must have been intended to serve as a source of income. Similarly the prisoners who were devoted to Khaldis would have been given as temple slaves. In the case of victory, the share of the god, we are told, was a sixtieth of the spoil (*ib.* xliii. 16). The temples, of which there were several varieties, probably possessed festival halls, since we hear of sacred feasts in honour of the gods.

LITERATURE.—Sayce, 'The Cuneiform Inscriptions of Van Deciphered and Translated,' in *JRAS*, 1882, 1888, 1893, 1894, 1901, 1906; C. F. Lehmann, *SBAW* xxix., 1900; Belck and Messerschmidt, *Anatole*, i., 1904. For the history of the kingdom of Ararat and the Khaldi see Prášek, *Gesch. der Meder und Perser* (Gotha, 1906), 54.

A. H. SAYCE.

ARMENIA (Zoroastrian).—The sources of our information for the earlier epoch of Armenia's religious history are the Urartic or Vannic inscriptions (see preceding art.). For the Indo-Germanic period down to Christian times the most important native sources are Agathangelos (5th cent., ed. Venice, 1862), Moses of Chorene's *History and Geography of Armenia* (5th cent., ed. Venice, 1865), Faustus of Byzantium (5th cent., ed. Venice, 1889), Eznik (5th cent., ed. Venice, 1826), Anania Shiragaci, (7th cent., ed. Patkanean, St. Petersburg, 1877), and (for names) the ancient Armenian version of the OT. We also gather short but valuable notices from Xenophon's *Anabasis*, Strabo's *Geography*, and the works of Dio Cassius, Pliny, and Tacitus. Considerable as the material is, it is but incidental to the main purpose of these ancient authors, and is, therefore, very fragmentary. We may, however, hope for important additions to our knowledge of Zoroastrianism in early Armenia from the critical study of Armenian folk-lore and popular superstitions, when enough shall have been collected for the purpose.

Originally there was nothing in common between the Iranian races and the ancient inhabitants of Armenia, who were probably connected with the Hittites in the West and the Caucasic races of the North (Jensen, *Hittiter und Armenier*, Strassburg, 1898; Messerschmidt, *Die Hittiter*[2], Leipzig, 1902, p. 10; Winckler, 'Westasien' in Helmolt's *Weltgeschichte*, Leipzig, 1901, iii. 125 ff.; Hommel, *Grundriss der Geog. und Gesch. des alten Orients*, Munich, 1904, pp. 37 ff.; Prášek, *Gesch. der Meder und Perser*, Gotha, 1906, i. 57, 65). But Armenia, owing to its geographical position, was destined to come into contact with Iranian politics and civilization when the Medes began their political career. Towards the end of the 7th cent. B.C. the Vannic, or Khaldian, kingdom (see preceding art.) fell before the invading hordes of Cimmerians and Scythians, and during this period of anarchy the Armenians seem also to have entered the country which was henceforth to bear their name (Hirt, *Die Indogermanen*, Strassburg, 1905–07, p. 138). Meanwhile the Medes had begun

their national career not long before 935 B.C. (Justi, 'Gesch. Irans' in Geiger-Kuhn's *Grundriss der iran. Philologie*, Strassburg, 1904, ii. 404–406), and the Median empire had been founded, probably in 678–677 B.C. (Prášek, *op. cit.* i. 108). From that time Iranian influence was strongly felt in the politics, language, and social organization of Armenia, and the Iranian religion, with its terminology, names of divinities, and many folk-beliefs, permeated Armenian paganism. How far the resultant religion may be treated as Zoroastrianism will become clear from a more detailed study of the material available, which may most conveniently be arranged under the main rubrics of Zoroastrian theology.

I. *CELESTIAL HOSTS.*—1. **Ahura Mazda.**—The chief deity of ancient Armenia was Aramazd, the Zoroastrian Ahura Mazda (see ORMAZD). In Agathangelos, the historian of the conversion of Armenia, King Tiridates calls him 'the maker of heaven and earth; father of all the gods, especially of Anahit, Mihr, and Nanē; giver of abundance and fatness' (Agathangelos, pp. 58, 61, 106, 590, 591, 593); while Moses of Chorene incidentally remarks: 'There is no such thing as Aramazd; but among those who would be Aramazd, there are four who bear the name, and one of them is Kund Aramazd' (*Hist. of Armenia*, i. 31). It is uncertain whether this refers to the Greek Zeus or to the Iranian Ahura Mazda. In the first case it might mean 'the bald (*φαλακρός*) Zeus'; in the second, *kund* might be translated 'brave,' 'strong' (Stepané's modern Armenian translation of Moses of Chorene, p. 395). In fact, 'great' and 'brave,' or 'strong,' are frequent epithets of the Armenian Ahura Mazda (Agathangelos, pp. 52, 61, 106).* The name *Aramazd* reminds us of the *Auramazdā* of the Old Pers. inscriptions, rather than of the Avesta or Pahlavi forms *Ahura Mazda* or *Aŭharmazd*, *Ohrmazd* (cf. Armen. *Ormizd*). There is another important passage in Agathangelos (p. 623) about Aramazd, which may be tentatively translated thus: 'In the season of the god of the New Year, (who is) the bringer of new fruits, of the festivities of the hospitable god.'

The later Greek translation reads: *καὶ τὰ μνημόσυνα τῶν ἐνεχθέντων ἔταξεν εἰς τὴν μεγάλην πανήγυριν τῆς λεγομένης Διαπομπῆς, τῆς ματαίως εἰς τιμὴν τῶν παλαιῶν σεβασμάτων γενομένης ἀπὸ τῶν καιρῶν τῶν νέων εἰς τὰς ἀπαρχὰς τῶν καρπῶν, ξενοδέκτων θεῶν λεγομένης τῆς πανηγύρεως, ἣν ἐπιτελοῦσιν ἐν τῷ τόπῳ ἐκείνῳ εὐφραντικῶς ἀπὸ τῶν ἀρχαίων καιρῶν ἐν ἡμέρᾳ τῆς πληρώσεως τοῦ ἐνιαυτοῦ*, 'And he ordered the commemoration of the (sainte) brought in on the great feast of the so-called Diapompe, which was vainly held in honour of the ancient gods from the new seasons unto the first fruits, this being the festival called that of the hospitable gods [mistranslation of *dik'*, 'god'], which they joyfully celebrate in that place from olden times, on the last day of the year.'

This translation shows that the Gr. supposes a different, but none the less obscure, Armen. recension. The text must have become corrupt in early times, and yet St. Clair-Tisdall (*Conversion of Armenia to the Christian Faith*, London, 1896, p. 50) sees in it a new deity Amenabeλ, who had for a title Amanor ('New Year'). Others recognized Vanatur, 'hospitable,' as a separate deity, and explained it as 'deus hospitalis' (Gelzer, *Zur Armen. Götterlehre*,† pp. 133, 146) or 'Lord of Van' (Hommel, *op. cit.* p. 39). Moses of Chorene, however, in his allusion to this festival (ii. 66), treats *Amanor* simply as a common noun; nor does anything in the text of Agathangelos as it stands, either here or elsewhere, make it necessary to take either Amanor or Amenabeλ as the name of a deity. As for Vanatur, the only other time we find it mentioned (Armen. tr. of 2 Mac 6^2 LXX, *Διὸς Ξενίου*, Vulg. *Iovis hospitalis*), it is used as an adjective qualifying Aramazd. We can, therefore, fairly infer that it is simply the Greek *Ζεὺς Ξένιος* (see also Alishan, *Ancient Faith of the Armenians*, Venice, 1895, p. 256), whose functions were transferred to Aramazd under the Hellenizing influence of the Seljuks, or of Tigranes the Great and his successors. Very probably the festival of Amanor or Navasard, which is poetically described as a *fête champêtre* (Grigor Magistros), was celebrated in honour of Aramazd, who was the lord of the New Year, quite as the six days' celebration of the Zoroastrian New Year began on the day Aŭharmazd of the month Fravarṭīn in honour of the creation of the world in six days by Ahura Mazda (Mar. 15; cf. al-Bīrūnī, *op. cit.* pp. 199–204). Navasard fell, according to the later calendar of pagan Armenia, in August, when the new fruits began to be gathered; and the Armenians still perpetuate the memory of this early autumn celebration by distributing and eating fruits on New Year's day.

The most prominent sanctuaries of Aramazd were in the ancient city of Ani in Daranali, the burial-place of the Armenian kings (Agathangelos, p. 590), as well as in the village of Bagavan in Bagravand (*ib.* p. 612), and on Mount Paλat or Pashat ('The coming of the Rhipsimean Virgins' in Alishan's *Hayapatum*, Venice, 1901–02, p. 79).

It is not easy to determine what the Armenians understood by the fatherhood of Aramazd, as no goddess is mentioned as his consort, not even Spandaramet. It is through sheer ignorance that a late martyrology (quoted by Alishan, *Ancient Faith*, p. 260) calls Anahit the wife of Aramazd, she being rather his daughter (see below). The fatherhood of Ahura Mazda, however, is not altogether foreign even to the Avesta, which represents him as both the father and the husband of Spenta Armaiti (*Yasna* xlv. 4, xxxiv. 10; *Yasht* xvii. 16), as well as the husband of other female divinities (according to the Pahlavi commentary on *Vendīdād* xi. 5, of the Fravashis; cf. also *Yasna* xxxviii. 1; *Visparad* iii. 4), and the parent of Asha Vahishta (*Yasna* xlvii. 2), Sraosha, Rashnu, Mithra Ashi (*Yasht* xvii. 16), Atarsh (*Yasna* xxxvi. 3, etc.), Haoma (*Yasna* xi. 2), and, indeed, of all the Amesha Spentas (*Yasht* xvii. 2). On the whole, one may affirm that the Armenian Aramazd agrees quite well, in the little that we know about him, with the Avesta Ahura Mazda. In the Armenian of the 5th cent. *Ormizd*, the variant form of Aramazd, generally refers to the later form of the Zoroastrian Ahura Mazda; but the adjective *Ormzdakan*, 'Ormazdian,' may also have been used in reference to the Armenian Aramazd and the Greek Zeus.

2. **Amesha Spentas.**—Of these Zoroastrian archangels (see art. AMESHA SPENTAS), only Spenta Armaiti is unmistakably present in the Armenian pantheon. Her name appears in two forms, *Spandaramet* and *Sandaramet*, with a difference of meaning, the latter term denoting 'abyss,' 'Hades' (cf. Hübschmann, *Armen. Gram.*, Strassburg, 1897, i. 73–74); but *Spandaramet* never occurs in the abstract theological meaning that the Avesta attached to the Indo-Iranian spirit of the earth and the keeper of vineyards (cf. the Pahlavi *Shāyast-lā-Shāyast*, xv. 5; Gray, *ARW* vii. 364–371). It is owing to this latter function of Spenta Armaiti, however, that the Armenian Christian writers of the 5th cent. used her name to translate *Διόνυσος* in 2 Mac 6^7, although, by a strange inconsistency, they translated the same name by *Ormzdakan gad*, 'Ormazdian,' in 2 Mac 14^{33} and 3 Mac 2^{29}. *Spandaramet* in the form of *Sandaramet*, as already noted, came to be a synonym of Hades, and was very frequently referred to in theological books and in the Church

* Cf. such common Avesta epithets of Ahura Mazda as *mazišta* ('most great'), '*sevišta* ('most mighty'); *e.g. Yasna* xvi. 1.

† *Berichte der. könig. sächs. gesellsch. der Wissensch. phil.-hist. Classe*, 1896. pp. 99–148.

hymnary. This sense is not altogether foreign to the Avesta itself, where, from being the genius of the earth, Spenta Armaiti gradually becomes the earth itself, with the dark, woeful under world. 'The darkness of Spenta Armaiti' (*Vendīdād* iii. 35) is a well-known expression of the Avesta, which has this in common with the Bab. cosmology, that the earth is also identical with the Hades which it contains, and that the powers of Hades have something to do with the fertility of the ground and with agriculture (Jeremias, *Hölle und Paradies bei den Babyloniern*, Leipzig, 1900, p. 19; for references to Spandaramet see Lagarde's *Purim*, Göttingen, 1887, p. 42).

Besides Spandaramet, we probably see the traces of the Amesha Spentas Haurvatāt and Ameretāt ('health' and 'immortality') in the Armenian *haurotmaurot*, the name of a flower (*hyacinthus racemosus Dodonei*), first mentioned by Agathangelos, p. 480 (cf. Abeghian, *Armen. Volksglaube*, pp. 62–63).

In the Qur'ān, ii. 96, Hārūt and Mārūt are mentioned as the names of two angels in Babel, who, according to Muslim tradition, having shown themselves impatient with human sinfulness, were sent down to earth by God to assume human flesh and to live in human circumstances. They could not, however, resist the temptations of lust, and were condemned to stay on earth, where they thereafter taught witchcraft. In the Arabic story of Bulūqyā, incorporated with the story of Ḥasīb Karīm-ad-Dīn in the *Arabian Nights* (tr. Payne, v. 72–73; cf. Horovitz in *ZDMG* lv. 523), Ḫillīt and Millīt, or, in Tha'labī's *Qiṣāṣ al-Anbiyā*, Jiblīt and Timlīt, are mentioned as the first inhabitants of hell. Burton and Eb. Nestle (*ZDMG* lv. 692) identify these with Hārūt and Mārūt, which have long been recognized as the Pahlavi Horvadaṭ (or Khūrdāṭ) and Amerōdaṭ (or Amūrdaṭ), or the Avesta Haurvatāt and Amerstāt. The Muhammadan legend in regard to these fallen angels has many parallels in Rabbinical literature, and the whole is, ultimately, a Rabbinical elaboration of the intermarriage of the sons of God and the daughters of men (Gn 6[4]; cf. Geiger, *Was hat Mohammed aus dem Judenthume aufgenommen?* Bonn, 1834, pp. 105–106; Hirsch in *JE* v. 333). How the Zoroastrian archangels were drawn into this Rabbinical legend of the Qur'ān, and by what curious accident, instead of the later Pahlavi forms, we have *Hārūt* and *Mārūt*, which find their parallel only in the Armenian name of a flower, is very problematical. Either *Hārūt* and *Mārūt* are Parthian, or even Syrian, corruptions of the archangels' names, and found their way both to Armenia and Arabia, or they are purely Armenian forms, and reached Muhammad from the north. At all events, Hārūt and Mārūt were not remembered in Armenia as angels. We know, on the other hand, that the two Zoroastrian archangels in question were protectors of the vegetable world (Darmesteter, *Haurvatāt et Ameretāt*, Paris, 1875, *passim*), and two flowers were respectively consecrated to them—the lily and the *camba* (*Bundahishn*, xxvii. 24; perhaps the *Michelia Champaca*, or Champak); so that Haurvatāt and Ameretāt may once have been known in Armenia as tutelary deities of plants.

According to Strabo (p. 512), Omanos (Vohu Manah) and Anadatus (Ameretāt), with Anaïtis (Anāhita) as a chief deity, formed a triad in Zela—a cult which has not yet entirely disappeared (Gelzer, *ZA*, 1875, 14 ff.). This peculiar cult, however, had probably spread northward from Cappadocia, where there was a purer type of Mazdaism than in Armenia (Cumont, *Les mystères de Mithra*[2], Brussels, 1902, ch. i.).

3. Yazatas.—The Zoroastrian *yazatas*, or angels, are better represented in the Armenian religion than the Amesha Spentas. We shall discuss them in the order adopted by Jackson in *Grundriss der iran. Philologie*, ii. 640–645.

(1) *Atar, or fire.*—We cannot tell whether fire-worship was a part of the ancient cult of the Urarṭian period, or was first introduced in Iranian times. Moses of Chorene (ii. 77) mentions a fire-altar in Bagavan, upon which Ardashir, after the conquest of Armenia,* commanded that the fire of Ormazd be kept unquenched. Anania Shiragaçi, in his discourse on the Cross, speaks of a *hurbak* in Armenia, which Hübschmann (*Armen. Gram.* i. 181) rightly interprets as a loan-word from the Pahlavi *frōbāg* (Avesta **hvarenō-baya*, '[fire of] divine glory'), a fire established, according to Iranian tradition, in Chorasmia, and later removed to Kabul (*Bundahishn*, xvii. 5–6). In the hagiography called the 'Coming of the Rhipsimean Virgins' (Alishan, *Hayapatum*, p. 79), wrongly ascribed to Moses of Chorene, we read that on the top of Mount Paλat (?) there was a house of Aramazd and Astλik (Venus), and on a lower peak, to the south-east, there was 'a house of fire, of insatiable fire, the god of incessant combustion.' At the foot of the mountain, moreover, there was a mighty spring. The place was called Buth. 'They burnt the Sister Fire and the Brother Spring.* In the caves of the rocks dwelt two dragons, devilish and black, to which young men and young virgins were sacrificed. And the devils, gladdened by this bloodshed, produced, by means of the altars of the fire and the spring (?), terrible sights, lights, and rolling thunder; and the deep valley was full of snakes and scorpions.' Elsewhere we read: 'Because they called the fire sister, and the spring brother, they did not throw the ashes away, but they wiped them with the tears of the brother' ('Story of the Picture of the Holy Virgin' in Moses of Chorene, *Works*, ed. Venice, 1865).

This form of fire-worship in a volcanic region has hardly anything in common with Zoroastrianism, though we have a true remnant of fire-worship, even in modern times, in the annual bonfire kindled everywhere by Armenians on the festival of Candlemas, or the Purification of the Blessed Virgin Mary (Feb. 13=2), when the fire is kindled from a candle on the altar. It is an occasion of rejoicing and good augury. The festival is called in popular language *Tērntaz*, and in the Church calendar the commemoration is called *Teaṙnedaṙaj*, 'Presentation of the Lord' (Abeghian, *op. cit.* p. 72).

It seems that the ashes of the sacred fire were also honoured, and the Christian writers love to remind their readers of the times when their ancestors were ash-worshippers (Agathangelos, p. 77; Anania Shiragaçi, *Praise of the Cross*, quoted by Alishan, *op. cit.* p. 45 ff.); while Thomas Artsruni applies this name to the Zoroastrians (*Hist.* i. 9–10). Nevertheless, vestiges of ancient fire-worship are still to be found among the Armenians of the interior (Abeghian, *op. cit.* pp. 66–74).

It is quite possible that two types of fire-worship existed among the Armenians—one, older and more primitive, in which fire was a feminine principle, and stood in close association with water, as a masculine principle; the other type similar to the Zoroastrian.

(2) *Water.*—Water was honoured in Armenia as a masculine principle. Many rivers and springs were sacred, and endowed with beneficent virtues. According to Tacitus (*Annals*, vi. 37), the Armenians offered horses as sacrifices to the Euphrates, and divined by its waves and foam. Sacred cities were built around the river Araxes and its tributaries. Even now there are many sacred springs with healing power, and the people always feel a certain veneration towards water in motion.

Transfiguration Sunday in the Armenian Church was amalgamated with an unmistakably pagan water-festival, during which the people amused themselves, as they still do, with throwing water at each other. A similar custom connected with New Year's Day is reported of the Persians (Alishan, *op. cit.* p. 305; al-Bīrūnī, *Chronology*, pp. 199, 203). The Armenian water-day, or feast of the Transfiguration, is called *vardavaṙ*, or 'rose-festival' (from *vard*, 'rose'). It falls in the last days of the year, according to the ancient Armenian calendar (Alishan, *op. cit.* pp. 283, 305).

* Shapur, not Ardashir, actually took possession of Armenia about A.D. 250.

* On water and fire as brother and sister see Abeghian, *op. cit.* p. 67. Lazar of Pharpe says (ed. Venice, p. 203): 'They took the (sacred) brazier and dashed it into the water, as into the bosom of its brother, according to the saying of the false teachers of the Persians.'

The great Zoroastrian water-*yazatas*, however, do not seem to be connected with water-worship in Armenia, even when they have a place in the Armenian pantheon. Of these *yazatas* we perhaps recognize Apām Napāt in the name of *Npat*, the Νιφάτης of Strabo, a sacred mountain of Bagravand, Npat being also the designation of the 26th day of the Armenian month, which was consecrated to the mountain.

(3) *Anahit.*—This goddess, doubtless an importation from Persia, was the most popular deity of Armenia. In Agathangelos she is called 'the great lady [queen] Anahit, the glory and life-giver of our nation' (p. 51) 'through whom the country of the Armenians exists and has life' (p. 61), and she is 'the mother of sobriety, the benefactress of all mankind, and a daughter of Aramazd' (p. 52). She is invoked, in an edict of Tiridates, to protect and watch over the country (p. 106). She was also called the golden mother (p. 607), and statues of massive gold were consecrated to her (pp. 591, 607), one of which (at Erēz?) was captured by the soldiers of Antony (Pliny, *HN* xxx. 24). With this may be compared the description of Ardvī Sūra Anāhita in the Avesta (especially *Yasht* v. 64, 78, 101–102, 123, 126–129), 'who purifyeth the seed of all males; who purifyeth the wombs of all females for birth; who maketh all females bear with ease; who giveth all females meet (and) timely milk' (*Yasna* lxv. 2=*Yasht* v. 2), besides multiplying herds and lands (*Yasht* v. i.). Although the Iranian texts nowhere consider her the daughter of Ahura Mazda, she is 'his only water' (*Yasht* v. 5); and the epithet 'golden' of Agathangelos is paralleled by her Avesta attributes, 'laced with gold' (*Yasht* v. 64), 'wearing a golden kerchief' (*ib.* 123), 'with square golden earrings' (*ib.* 127), and 'with a golden diadem' (*ib.* 128; for further details, cf. Windischmann, *Die pers. Anâhita oder Anaïtis*, Munich, 1856). While the sacrifices offered to Anāhita as described in the Avesta (*e.g. Yasht* v. 15, 21) are quite conventional, the Armenians offered her green branches and white heifers (Agathangelos, p. 49). Lucullus (Plutarch, *Lives*) saw in Yashtishat (?) herds of these heifers, which were used only for sacrifices, at all other times 'wandering up and down undisturbed, with the mark of the goddess, a torch, branded on them.' Anahit was sought also in cases of great sickness (Moses of Chorene, ii. 60).

Three elements are to be distinguished in the Avesta Anāhita. She is a planet (Venus), a goddess of the fertilizing waters, and a female deity presiding over the birth and nursing of children, and the increase and maintenance of all things. The Armenian Anahit is pre-eminently a goddess, with no reference to a planet or water. The fact that in Erēz this goddess admitted of obscene forms of worship, such as are generally associated with the orgiastic nature-cults of Asia Minor, must be explained by the proximity of Akilisene to Asia Minor, as well as by the part which the Avesta Anāhita plays in human conception. Strabo says of this special cult (p. 532):

'Both the Medes and the Armenians honour all the sacred matters of the Persians; but above everything the Armenians honour Anahit, to whom they erect temples in other places, and specially in Akilisene [Ekeλeaç]. There they consecrate to her servants, male and female,* and this is not surprising; but the most illustrious men of the nation give to her their virgin daughters, who, according to custom, give themselves up to fornication for a long time near the goddess, after which they are given in marriage, and none thinks it unworthy to live with them.'

We have absolutely no proof, however, that this sacred prostitution was characteristic of the Armenian Anahit throughout the country, especially as native Christian writers do not mention it, although they might have used it to great advantage in their attacks upon the old religion.

Besides the great sanctuary in Akilisene, which was also called the Anahitian district (Dio Cassius, xxxvi. 88), Anahit had temples in Artashat (Artaxata) (Agathangelos, p. 584) and in Yashtishat (p. 606); while a mountain, now difficult to identify, was called the throne of Nahat (Faustus of Byzantium, v. 25), probably owing to the presence of a great sanctuary of the goddess there.

An image of Anahit is said to have existed in the district of the Anzavatzis near the 'Stone of the Blacksmiths,' where, as in Buth, there was a mixed worship of fire and water, along with magical practices (Alishan, *Hayapatum*, p. 50).

The great festival of Anahit was celebrated, according to Alishan (*Ancient Faith*, p. 269), on the 15th of Navasard with processions and rejoicings. The 19th day of every month was also consecrated to her (Tcherpet, 1820, quoted by Alishan, *Ancient Faith*, p. 143).

(4) *Sun and moon.*—Moses of Chorene makes repeated allusions to the worship of the sun and moon in Armenia. In oaths the name of the sun was almost invariably invoked (ii. 19), and there were also altars and images of the sun and moon (ii. 77). Of what type these images were, and how far they were influenced by Syrian sun-worship, we cannot tell. Agathangelos, in the alleged letter of Diocletian to Tiridates, unconsciously bears witness to the Armenian veneration for the sun, moon, and stars (p. 125). But the oldest witness is Xenophon, who notes that the Armenians sacrificed horses to the sun (*Anabasis*, iv. 5. 35; Weber in his *Die kathol. Kirche in Armenien*, Freiburg, 1903, p. 28, understands this ἥλιος as Mithra). The eighth month of the Armenian year and, what is more significant, the first day of every month, were consecrated to the sun and bore its name, while the first day of the Persian month was assigned to Ahuramazda, the eleventh day being given to the sun in the Zoroastrian calendar. The twenty-fourth day of the Armenian month was consecrated to the moon, as was the twelfth in the Avesta system. The Armenians, like the Persians and most of the sun-worshipping peoples of the East, prayed towards the rising sun, a custom which the early Church unconsciously adopted, so that to this day the Armenian churches are built and the Armenian dead are buried toward the east, the west being the abode of the devil (see below). As to the moon, Anania Shiragaçi says in his *Demonstrations* (ed. Patkanean, p. 66): 'The first fathers called her the nurse of the plants,' an idea which has its parallel, and probably its source, in the short *Māh-yasht* of the Avesta, particularly in that vegetation grows best in the time of the waxing moon (*Yasht* vii. 4; al-Bīrūnī, *Chronology*, p. 219). Ohan Mantaguni (5th cent.) combats the general belief that the moon prospers or mars the plants (*Discourses*, Venice, 1860, pp. 198–199). The Armenians also shared the superstitions about the eclipse of the sun and moon current among the Persians, who held that these phenomena were caused by two dark bodies,* offspring of the primeval ox, revolving below the sun and moon, and occasionally passing between them and the earth (*Dāṭistān-ī-Dēnīg*, lxix. 2; *Shikand gūmānīg Vijār*, iv. 46). It was, moreover, a popular belief that a sorcerer could bring the sun or moon down from heaven by witchcraft (Eznik, *Refutation of Sects*, p. 217), though this does not find a parallel in the extant Zoroastrian writings.

No doubt the Persian worship of the sun and moon found a similar worship of long standing in Armenia, that of the Urarṭians (see preceding

* Cf. the male and female temple-prostitutes of the ancient Semites, adopted by the Cappadocians as well as by the Armenians.

* The modern Armenians still speak of an 'evil star' which causes the eclipses.

art.), and could do little more than influence it to a certain extent.

It has been suggested, with some plausibility, that the famous hymn to Vahagn, quoted by Moses of Chorene (i. 31), sounds like a sun-hymn:

'The heavens travailed; the earth travailed;
Also the purple sea travailed;
And in the sea
The red reed travailed.
From the stem of the reed there arose a smoke;
From the stem of the reed there arose a flame;
From the flame ran forth a young man.
He had fiery hair;
He had a beard of flame;
And his eyes were suns.'

Both sun- and moon-worship have left deep traces in the popular beliefs of the present Armenians (see Abeghian, *op. cit.* pp. 41–49; Tchéraz, 'Notes sur la mythologie Arménienne,' in *Transact. of 9th Internat. Congress of Orientalists*, London, 1893, ii. 823 ff.).

In the Armen. writers from the 11th to the 14th cent. we meet with a sect or tribe called 'the Sons of the Sun,' first mentioned by Grigor Magistros (11th cent.), who says, placing them between the Armenian Paulicians and Thondracians: 'Behold, some of the Persian Magi of the Mage Zoroaster and the sun-worshippers envenomed of them, called Sons of the Sun, many of whom live in Mesopotamia, call themselves Christians, but we know how viciously and abominably they conduct themselves.' When, however, David, son of Alauk, says, a little later: 'The Pauliciana or Euchites are the tribe of the Sons of the Sun,' he is evidently confusing three distinct things. From the letter of Nerses Shnorhali (12th cent.) about the 'Sons of the Sun' we learn that they wished to be received into the flock of Christ, so that, in his opinion, they were Armenians both in language and in nationality, who had remained unconverted in the times of Gregory the Illuminator, but now abjured their errors and their evil ways. Nerses gives special instruction about their reception into the Christian Church, about their moral life, and about giving up their magical practices, especially among women. 'Teach them to abstain,' he writes, 'from mixing impure things in the food and drink of the Christians for the purposes of their own diabolical love.' Nerses also mentions their worship of the sun and their reverence for the poplar. Later the Catholicos Mkhit'ar, in a letter to the pope, says: 'At that time (middle of the 14th cent.) there were Sons of the Sun in Manazkert'; and in the same century, Mkhit'ar Apareneçi writes: 'There are some Armenians by birth and language who worship the sun, and are called Sons of the Sun. They have neither writing nor literature. Fathers teach children by tradition what they have learned from the Mage Zoroaster, the chief of the fire-temple. Whithersoever the sun goes, they worship him in that direction, and they reverence the poplar, the lily, the cotton plant, and the other plants which turn towards the sun. They make themselves like those flowers in faith and action, high and fragrant. They offer sacrifices for the dead, and they pay taxes to the Armenian priests. Their chief is called Hazrbed, and twice or oftener every year all of them, men and women, sons and daughters, gather in a very dark pit.' In another place we read:

'A woman feels no disgust towards
A Son of the Sun;
Nor towards a Turk or an Armenian;
Whomsoever she loves, he is her faith.'

In the 14th cent. Thomas Mejop'eçi tells us that Timurlang came to Mardin (Mesopotamia) and destroyed four villages of the Sons of the Sun—Shol, Shemełaš, Safari, and Maraλ; 'but by the machinations of the devil they multiplied in Mardin and Amid.'

These quotations are drawn from Alishan's *Ancient Faith of the Armenians*, and from Grigor Vantzian's art. in *Handès Amsoria*, 1896, p. 13 ff. Some of them are evidently of little value. Vantzian tries to prove that the Sons of the Sun were not Armenians, because (1) they had no literature, (2) they were not persecuted fanatically by the Christian Armenians. Moreover, he finds it difficult to identify them with the ancient Zoroastrians, because they had no magi or fire-worship. These conclusions disregard the best contemporaneous authorities on the subject. Even Grigor Magistros interposes them, in his allusion to them, between the Armenian Paulicians and the Thondracians. They spoke Armenian and called themselves Armenians. If they were not persecuted, this may well be due to the fact that the Christian Church has always shown more animosity against its own heresies than against heathenism, even within the boundaries of the national Church. There is, of course, no evidence of an organized Zoroastrianism or of a sacred fire among the 'Sons of the Sun'; but they might very well have been the remnants of a scattered community which had lost its magi and sacred fire. They may possibly have belonged originally to some district of Eastern Armenia, or they may have been descendants of Armenian converts during the strong Zoroastrian propaganda of the 5th cent. in Armenia. This, however, must still remain an open question, although it should be noted that they have lately been found to have some points of contact with the Yezidis (*q.v.*).

(5) *Tishtrya.* — Another important *yazata* of Zoroastrianism is Tishtrya (Sirius), the 'bright and glorious star' (*Yasna* i. 11, xxvii. 2, etc.), who assumes the form of a bull with golden horns (*Vendīdād* xix. 37), and again, as a white horse with yellow ears and golden bridle, fights against the demon Apaosha (drought) and pours upon the earth the fertilizing rain and the seeds of all plants (*Yasht* viii. 18–33; *Bundahishn* vii. 4–13). He is the chief of all the stars (*Yasht* viii. 44; Plutarch, *de Iside et Osiride*, 47), or at least of the stars of the East (*Bundahishn* ii. 7); and the eighth *Yasht* is devoted to his praise. Besides Tishtrya there was also Tīr, the genius of the planet Mercury, to whom, according to the *Bundahishn* (v. 1), Tishtrya was opposed.

In Armenian mythology also we find a Tir or Tiur, who has often been wrongly identified with Tishtrya, but who is, in reality, another divinity altogether. The Armen. Tiur (which Jensen, *Hittiter und Armenier*, pp. 186–187, endeavours to derive from Armen. *dpir*, 'writer,' 'scribe,' which would be a title of the Bab.-Assyr. Nabu, who was both the scribe of the gods and the planet Mercury [Orelli, *Allgem. Religionsgesch.*, Bonn, 1899, pp. 185–186]) is undoubtedly identical with Tīr, whose name is so often used in such theophorous compounds as Tiridates and Tiribazus (cf. Nöldeke, *SWAW, phil.-hist. Classe*, cxvi. 417–420; Justi, *Iranisches Namenbuch*, Marburg, 1895, p. 325 ff.), and who was widely known and honoured as an independent deity, being probably identified with the planet Mercury, although Tīr is not found in Armenian with this meaning.

Both in Cappadocia and in Armenia the fourth month was consecrated to this Tīr; and this was also true of the Parsi calendar, although, for theological reasons, the Parsis later made Tīr the equivalent of Tishtar (cf. *Bundahishn* xxv. 3, with *Āfrīngan* iii. 8).* The Armenian Tir was famous as 'the interpreter of dreams,' as the tutelary deity of arts and learning, and as the scribe of Ormizd (Agathangelos, p. 584). Among the Armenians of modern times 'the writer' (very probably Tīr) has much to do with human fate and death. 'The writer take him!' is a common imprecation.† Tīr is, therefore, the Armenian Nabu, and there can be little doubt that the description given of him by Agathangelos whose Greek translator equates Tīr with Apollo (Lagarde, *Gesammelte Abhandlungen*, Leipzig, 1866, p. 294), agrees, in the main, with the general belief among other Oriental nations about Tīr.‡ In fact, the planet Mercury also is known among the Persian poets as 'the writer' (Stackelberg). The expression 'Scribe of Ormizd' applied to Tīr in Agathangelos has a Persian tinge, for the Armenians very seldom used the name Ormizd for their own Aramazd.

(6) *Mithra.* — Last, but by no means least, among the Zoroastrian *yazatas* is Mithra, the genius of the light of the heavens, and the god

* The Zoroastrian calendar also devotes the thirteenth day of each month to Tishtrya (Avesta) or Tīr (Pahlavi) (cf. *Sīrōza*, i. 13, ii. 13; *Yasna* xvi. 4, with *Bundahishn* xxvii. 24). That Tīr here refers primarily to the planet Mercury, and not to Tishtrya (Sirius), is confirmed by al-Bīrūnī's statement, in his account of the Tīragān, celebrated on the day Tīr of the month Tīr (*Chronology*, pp. 205–206): 'The name of this day is Tīr or Mercury, who is the star of the scribes.' The difficult problem of the replacing of Tīr by his opponent Tishtrya (cf. Spiegel, *Avesta Uebersetzt*, Leipzig, 1852–1863, iii. Introd. 21–22; Nöldeke, *loc. cit.*) is perhaps best explained by Justi, *op. cit.* p. 325: 'Da die Planeten später als feindliche Wesen galten, ward Tīr als Schutzgenius des 4. Monats und des 13. Monatstages durch den Tištrya (seinen Gegner) ersetzt; im Alterthum galt Tīr als guter Genius, wie die Eigennamen, deren ersten Theil sein Name bildet, beweisen.' The derivation of Tīr, 'Mercury,' is uncertain.—[Louis H. Gray].

† Cf. also Abeghian on the Groλs, or the 'writers,' as spirits of disease (*op. cit.* pp. 122–123). The words *Tir* and *Tī* were also used as exclamations: '*Tir*, forward!' Their relation to the deity's name, however, is not quite certain.

‡ In Egypt this god had his parallel in Thot, the moon-god of Chemun (de la Saussaye, i. 207).

of truth and faithfulness, whose praises are especially celebrated in the tenth *yasht*. Derzana was the centre of Armenian Mithra-worship, and he also had a famous temple in the sacred village of Bagayarinj (Agathangelos, p. 515), although we have no proof whatever that Mithraism had obtained any foothold in Armenia proper. Mihr, the Armenian Mithra, was specially called the son of Aramazd (Agathangelos, p. 593; cf. *Yasht* xvii. 16); but, owing to the strong worship of the sun and Vahagn among the Armenians, he does not seem to have become as prominent in Armenia as in Persia, his place seeming, indeed, to be usurped by Vahagn (see below). Nevertheless, his name occurs frequently as a component part of many proper names of persons, such as *Mihran*, *Mihrdat* (Mithridates), and *Mehružan* (Hübschmann, *Armen. Grammatik*, i. 52–54), while the Armenian *mehean*, 'pagan temple, idol, altar,' has also been traced to the same source (cf. Hübschmann, *op. cit.* i. 194). The seventh month of the year and the eighth day of each month were his; and in the Zoroastrian calendar the seventh month and the sixteenth day were consecrated to him. We know nothing, however, of the functions or other duties of the Armenian Mithra.

(7) *Fravashis.* — Chief among the Zoroastrian *fravashis* (lower angels), is Verethraghna, the genius of victory, to whom the Avesta consecrates the fourteenth *yasht*. Like Mithra, he is of Indo-Iranian origin. In Pahlavi times his name was thinned down to *Bahrām*, often used by Persian kings, and in Armenian to *Vahrām* and *Vŕam*. It is also very possible that Vrt'anēs, the name of the second son of Gregory the Illuminator, reflects the Parthian form for *Verethraghna*. Since Lagarde, there has been a strong tendency to identify the Armenian Vahagn, probably the god of war and victory (Agathangelos, p. 106), with Verethraghna. According to Armenian phonetic laws, this is quite possible, although the termination *-agn* and the complete disappearance of both *r*'s constitute a difficulty. There was, moreover, a noble family called the *Vahevunis* (Elisæus, pp. 70, 127, 160, 173); while the list of the Armenian nobles in Mesrop's *Life of St. Nerses* gives *Vohevuni* (p. 33), but further below it adds the *Vahuni* (p. 34) as a different family. Moses of Chorene (i. 31, ii. 8, 12, 88) knows a priestly family of the name of *Vahnuni*, whom he makes descendants of Vahagn. Probably in all these cases Vahagn was the tutelary god, and the first syllable of his name was treated as independent.

Although in the ancient Armenian triad of Aramazd, Anahit, and Vahagn (Agathangelos, p. 106), Vahagn has the place of Mithra in the Old Persian triad (Art. Sus. a, 5; Ham. 6), he must be interpreted, despite the minor phonetic difficulties already mentioned, from the Avesta Verethraghna. Essentially a deity of victory, the latter fittingly declares: 'I will conquer the malignancies of all the malignant: the malignancies of demons and men, of wizards and witches, of oppressors, *kavis*, and *karaps*' (*Yasht*, xiv. 4), while the very form of his name recalls its Sanskrit equivalent *vŕtrahan*, the Vedic epithet of Indra as the slayer of the cloud-demon Vŕtra. The reflexion of his career in the Avesta is seen in the statement that 'Vāhrām the victorious is the stimulator of the warlike' (*Shāyast-lā-Shāyast*, xxii. 20), although the Iranian texts preserve no tradition of his conquests over dragons in the strict sense of the term. On the other hand, in Hellenic times Vahagn was compared with Herakles, and called the dragon-killer (Agathangelos, p. 606), while the Greek Agathangelos translates *Vahagn* as Ἡρακλῆς, and, reversing the process, the Armen. version of 2 Mac 4^{19} renders Ἡρακλῆς by *Vahagn*. Ancient Armenians told, moreover, of Vahagn's stealing straw from Barsham (the Syrian god Ba'al-Shemīn, 'Lord of Heaven'), which he let drop on the way, thus forming the Milky Way (Anania Shiragaci, p. 48; cf. Abeghian, *Armenischer Volksglaube*, pp. 49–50). The Vahagn-song, the parallelism of Vahagn with Herakles, and his relations to Mithra and Barsham, tend to create the presumption that he was also a sun-god. The most famous temple of Vahagn was in Yashtishat in Taraun* (Faustus of Byzantium, iii. 14; Agathangelos, pp. 606–607), where he was also known as the lover of Astλik, the Syrian Aphrodite (Agathangelos, p. 607; Moses of Chorene, p. 88).

II. *INFERNAL HOSTS.*—1. Ahriman.—Ahriman (Armen. *Arhmn*) is never referred to in connexion with ancient Armenian paganism; but the absence of his name may be easily understood when we remember that, while Christian writers had a reason for arguing against the ancient deities, Ahriman (*q.v.*) and his retinue naturally coincided with Christian demonology. Other Zoroastrian evil spirits were known among the Armenians, however; and Ahriman could hardly fail to be known as their chief. Alishan (*Ancient Faith*, p. 210) suggests, with some plausibility, that he was known under the name of Čar, 'the evil one,' a word which is frequently found in that sense in Armen. theological writings and old popular spells. Besides *Arhmn*, the forms *Haraman(i)* and *Kharaman(i)* were also current in Armenia, *Haraman* being apparently the older (Arsacid) and *Arhmn* the younger (Sasanian) form (Hübschmann, *op. cit.* i. 26–27); so that the pagan Armenians possibly used *Haraman* to denote the Ahriman of their religion. Haramani is used as an epithet of snakes by Abraham of Zenag, a 5th cent. writer.

2. Demons.—Of the six Zoroastrian archdemons there is no mention. The *Asmodæus* of the Book of Tobit (3^8 etc.) was transliterated by the Armenians as *Azmod*, which plainly shows that the name suggested nothing familiar to them.† The word *dev* (Avesta *dæva*), 'demon,' was current among the Armenians, although they had also native words like *ais*. The *devs* preferred stony places (Moses of Chorene, iii. 55) and ruins (Eznik, p. 98). They appeared as serpents (Faustus of Byzantium, v. 2) and in many other monstrous forms (Eznik, p. 98); some of them were corporeal, others incorporeal (*ib.* p. 97).

The *družes* were lying, perjuring, harmful spirits, probably believed to be feminine, like their Avesta counterparts, the *drujes*. What the Avesta says in regard to their third mode of self-propagation—by the semen emitted in the *pollutio nocturna* (*Vendīdād* xviii. 45–52)—seems to have been a current belief among the Armenians (Eznik, p. 178; Abeghian, *Armen. Volksglaube*, pp. 35–36). The *yātus*, 'sorcerers' of the Avesta, who were able even to slay men (*Vendīdād* vii. 3), are well known and much feared among the modern Armenians as *jatuks*. The *pairikās* (Armen. *parik*), destructive female demons (cf. *Yasna* xvi. 8; *Yasht* viii. 54, xiii. 104; *Vendīdād* i. 9, xi. 9), were also believed in, but Eznik (p. 97) classes them with such chimeras as the *yuškapariks* and *hambarus* (see below).

3. Monsters and chimeras.—Aždahak (Avesta *Aži Dahāka*) and Višap, especially the latter, occupied a large place in ancient Armen. superstition; and Moses of Chorene (i. 30) states that

* This temple was called the 'eighth sanctuary' (Agathangelos, p. 606), possibly because Vahagn-worship, and specially this temple, rose to importance long after the seven main sanctuaries (Agathangelos, p. 34) had established themselves.

† It should be noted that the divergences between the Jewish אשמדאי and the Avesta *aēšma*, '(demon of) wrath,' are so grave that the usual view that the two are identical is not free from suspicion (cf. Ginzberg in *JE* ii. 219).—[Louis H. Gray].

Aždahak is, in Armenian, the same as Višap. The latter word is, it should be noted, a loan-word from the Avesta ἅπαξ λεγόμενον *višāpa*, 'whose saliva is poison,' used as an epithet of *aži*, 'serpent,' in *Nīrangastān* 48. The story of the war between Aždahak of Media and Tigranes I. (i. 24–30) probably contains traces of an old dragon-legend. In a later chapter Moses states that Aždahak was fettered and imprisoned in Mount Dembavend by Hruden, escaping only to be re-captured and guarded by his conqueror in a cave of the same mountain; just as, in Zoroastrian legend, Aži Dahāka, after a reign of 1000 years, was enchained by Thraētaona (Armenian, Hruden; Pahlavi, Frētūn) under Dimāvand, whence he is to arise at the Last Day and be slain by Sāma Keresaspa (*Bundahishn* xxix. 9; *Dāṭistān-ī Dēnīg* xxxvii. 97; *Dīnā-i Maīnōg-i Khraṭ* xxii. 38–39; *Dīnkarṭ* vii. 1, 26). Moses likewise records that Aždahak was kissed on the shoulders, and that from this kiss sprang serpents, which were fed on human flesh.* Though the extant Avesta does not note this, Aži Dahāka there being 'three-mouthed and three-pated' (*Yasna* ix. 8), the *Dāṭistān-ī Dēnīg* (*loc. cit.*) alludes to it in describing Dahāk, 'on whom most powerful demons and fiends in the shape of serpents are winged.' The legend is further elaborated by Firdausi in the *Shāh-Nāmah* (ed. Vullers-Landauer, 28, 99–30, 144; 35, 12–14), according to whom the kiss was bestowed by Iblīs. The legend of Aži Dahāka was also treated at length in the twentieth section of the lost *Sūṭkar Nask* of the Avesta (*Dīnkarṭ* ix. 21).

The *višaps* (Eznik, pp. 102–107) were corporeal beings which could appear both as men and as serpents, and could soar in the air by the help of oxen (?). They were fond of carrying the grain away from the threshing-floor, either by assuming the shape of mules and camels, or by real mules and camels of their own. In such cases, the Armenians called '*Kal! kal!*' 'Stop! stop' (Eznik, p. 103). They also sucked the milk from cows (Vahram Vartabed [13th cent.], quoted by Alishan, *Ancient Faith*, p. 172). The *višaps* went hunting on horseback; they had houses (Eznik, pp. 104, 107; cf. also *Yasht* xv. 19, and Darmesteter's note, *ad loc.*, on the palace of Aži Dahāka). They kept royal princes and heroes captive (Eznik, p. 104), among whom were Alexander the Great and Artavazd, king of Armenia (p. 105). They sometimes appeared enormous, and compelled men to worship them (p. 105). They entered into human beings; their breath was poisonous (p. 107). There was a whole colony of them at the foot of Masis (Moses of Chorene, i. 30), with whom Vahagn fought (*ib.* i. 31; Agathangelos, p. 607), and who later stole the child Artavazd and left a *dev* in his stead (Moses of Chorene, ii. 61; cf., further, on the *višap*, Abeghian, *op. cit.* pp. 78–83).

Closely connected with the *višaps* were the *nhangs* (Eznik, pp. 102–107)—a term borrowed from the Pers. *nihang* 'alligator, crocodile.' They lived chiefly in the rivers (Eznik, p. 106). According to Eznik, both *višaps* and *nhangs* appeared in deceptive forms, but the former were 'personal' (spirit-like), while the latter were not so (p. 102), so that he specifically declares: 'There is no personal *nhang*' (pp. 103, 107). Although they could assume different forms, they had no body (p. 102). Preferably they appeared as women (mermaids?) in the water (p. 106); but at other times they became seals, and, catching the swimmer by the feet, dragged him to the bottom (*ib.*). An unpublished manuscript of the *Geography* ascribed to Moses of Chorene in like manner reports the general belief that there were *nhangs* in the Araçani, a tributary of the Euphrates, as well as in the Euphrates itself. They used their victims for their lust, and then sucked their blood and left them dead. The Armen. translators use the word *nhang* for 'hippopotamus' and 'crocodile.'

The *šahapets*, or 'protectors' (cf. Avesta **šōiθ-rapaiti*, 'protector of the homestead,' Skr. *kṣetra-pati*, 'lord of a field'), are mentioned in Agathangelos as the protecting genii of graves (p. 56). They appeared in the shape of men or serpents, like the *višaps* (Eznik, p. 106), and kept the vineyards and olive trees, according to the ancient Armen. tr. of St. John Chrysostom on Isaiah.

Another class of fabulous monsters which seem to have a Persian origin is that of the *hambarus*. According to von Stackelberg, *hambaruna* in Persian means 'genius of houses,' but we know little as to how the *hambarus* were imagined. In the Armen. tr. of the LXX Is 34^{18} the word is used to render σιρήνων (Vulg. *draconum*). They were female beings, had a body, and were probably thought to live on land. 'They were born and they died,' says Eznik (p. 97), who mentions them along with *yuškapariks* and *pariks*. The *yuška-pariks*, or 'ass-*pariks*' (cf. Pers. *vušk*, 'ass'), used to render ὀνοκένταυρος in LXX Is 13^{22} $34^{11.\ 14}$, lived chiefly in ruined places (Eznik, pp. 97–98), while the *pariks*, to whom allusion has been made above, were seductive female demons, living not only in the water, but also in forests and meadows, as well as on the banks of streams. They are, primarily, water-deities, and correspond closely to the European mermaids, whom they also resemble in their frequent intrigues with mortal lovers. This erotic trait is an evident reminiscence in Armenia of the seductive *pairikās* of Zoroastrianism (see above; cf. also Abeghian, *op. cit.* pp. 103–104). Eznik (p. 99) likewise mentions the *covaçuls*, or 'sea-bulls,' which lived in lakes, propagating through kine, they themselves being born of cows. He also alludes to *pays*, which were born of men (pp. 98–99), and must doubtless be distinguished from the *pariks*. All these beings, as well as the *arłēz*, were held to be generally invisible, though occasionally they were seen of men (Eznik, p. 99). There are, moreover, other classes of demons in Armenian faith, such as the *yaveržaharsunks*, *k'ajk's* (husbands of the *pariks*), *mardagails* ('werwolves'), *als* (corresponding roughly to Lilith), the 'evil eye,' and disease-demons of various sorts (cf. Abeghian, *op. cit.* pp. 102–110, 116–127). Another clear survival of Armen. Zoroastrianism is the horror felt towards snakes, frogs, and ants (Abeghian, *op. cit.* pp. 30–31; cf. *Vendīdād* xiv. 5, and Darmesteter's note, *ad loc.*; Herodotus, i. 140), while the cat is an uncanny object, as in Parsi belief (Darmesteter, *loc. cit.*; *SBE* xviii. 419, where a demoniac father is attributed to it).*

III. *DEATH AND THE FUTURE LIFE.* — The abode of evil spirits and of the wicked dead was called *Džokhk'* (Pers. *Dūzakh*), and perhaps also *Sandaramet* (see above). We have absolutely no description of the Armen. Hades or Paradise; and the Avesta *garō-nmāna*, 'house of song, paradise,' appears in Armenian in the loan-word *gerezman*, 'grave.' After death, the soul lingered around the body until the corpse was buried, after which it remained in the vicinity of the grave or of its former dwelling for a year, though in later Armenian belief it passes to the future world within a day after burial (Abeghian, *op. cit.* p. 18). On its way, as in Iranian eschatology, the soul had to

* Faustus of Byzantium also (v. 22) tells a similar legend of King Pap.

* On the other hand, the Armenians lack the extreme veneration for the dog which is so characteristic of the Avesta (cf. *Vendīdād* xiii., xv. 5–6, 19–51; *Dīnkarṭ* viii. 23), so that *šun*, 'dog,' is also used in the sense of 'adulterer.'

cross a hair-bridge; if righteous, it reached the opposite shore in safety; if sinful, it dropped down into the stream of hell-fire. There was a middle place for those that were neither good nor bad (Abeghian, p. 20).*

We find absolutely no trace, however, of *dakhmas*, or 'towers of silence,' or of the custom of exposing bodies. On the contrary, there were great mausoleums for kings in the ancient city of Ani, and graveyards outside the cities. We also know that the Achæmenian kings did not obey the Avesta injunction concerning the exposure of dead bodies; while, according to Herodotus (i. 140), the Persians covered the corpse with wax and then buried it.

The Armenian burial-customs seem to have been more akin to the ancient Babylonian (Jeremias, *Hölle und Paradies bei den Babyloniern*, p. 10ff.). The friends and relatives of the deceased came to the ceremony of wailing (Faustus of Byzantium, iv. 15); and at the funerals of the rich, professional mourners were employed (Moses of Chorene, ii. 60), led by the 'mother of the dirge,' who sang the story of the life and death of the deceased, while the nearest relatives tore their garments, plucked their hair and screamed (Faustus of Byzantium, *loc. cit.*). They cut their arms (?) and faces (*ib.* v. 31). During the funeral they had music, produced by horns, violins, and harps. Men and women danced facing each other, and clapped their hands (*ib.*). Johannes Garneçi (quoted by Alishan, *op. cit.* p. 413) says: 'Forbid wailing (over the dead) . . . cutting of the hair, and (other) evil things.' When the deceased was a king or a great personage, servants and slaves committed suicide over his grave (Moses of Chorene, ii. 60). Ancient gravestones are found in the shape of horses and lambs, perhaps symbolic of sacrifices for the dead. The modern custom of distributing bread and raisins and strong drink after the burial, moreover, is probably a survival of an ancient sacrificial meal (cf. Abeghian, *op. cit.* pp. 20–23). To this day it is quite customary to make two holes on the gravestones.

Death was a decree of fate (Eznik, p. 153), inevitable (p. 161), and foreordained (p. 162). In fact, the whole life of man was thought to be led by Fate (Ohan Mantaguni, quoted by Alishan, *op. cit.* p. 411). Later Armenians also spoke of Hogëar, the 'soul-taking' angel, who is frequently identified with Gabriel (Abeghian, *op. cit.* p. 17).

There is little to be said about the eschatology of the Armenians, although they certainly believed in resurrection and immortality.

There is an ancient Armenian legend about the end of the world. Artavazd, son of king Artashes, seeing that many people committed suicide over his father's grave, said, 'Thou didst depart, and tookest with thee the whole country. Shall I rule over ruins?' Thereupon his father cursed him, saying:

> 'When thou goest a-hunting
> up the venerable Masis,
> May the *K'ajk's* seize thee and
> take thee up the venerable Masis!
> There mayest thou remain and see no light!'

Artavazd is said to have perished, while on a hunting party, by falling with his horse from a high precipice. One Armenian legend says that he is chained in a cave of Masis, and two dogs, gnawing at his chains, try to set him free in order that he may bring the world to an end. The chains become very thin about the season of Navasard (New Year's festivities in August). Therefore, on those days the blacksmiths used to strike a few blows with their hammers on their anvils in order to strengthen Artavazd's chains and save the world, a custom which was continued even into Christian times (Moses of Chorene, ii. 61; Eznik, p. 105). This legend seems to have some affinity with that of Biurasp Aždahak, which Moses of Chorene gives at the end of the first book of his *History of Armenia* (see above).

IV. *WORSHIP AND CEREMONIAL.*—There were probably temple-books which Christianity systematically destroyed. The temples were numerous, both in the country and in the cities; and there were also special temple-towns, such as Bagavan and Yashtishat, containing several important sanctuaries. Christian churches and monasteries succeeded both to the wealth and to the veneration belonging to the ancient sacred sites. Of ancient open-air worship we hear nothing, but there were sacred places on mountain tops, like the throne of Nahata (Faustus of Byzantium, v. 25). Besides the ordinary temples, the Armenians boasted, like other neighbouring and distant nations, seven main sanctuaries (Agathangelos, p. 34), which were often the scenes of great concourses of people gathered there for worship and religious festivities. Treasure-houses were connected with the great sanctuaries (*ib.* pp. 586, 591, 594; Moses of Chorene, ii. 48; Thoma Artsruni, i. 7), as they now are associated with the churches. Tiridates and Gregory plundered many of these on behalf of the poor and of the Church, during their campaign against the pagan sanctuaries of Armenia; and images and statues of deities were common, at least in later pagan times (Agathangelos, *locc. citt.*; Moses of Chorene, ii. 14).

Agathangelos (p. 34) describes the sacrifices of Chosroës after his return from victorious incursions.

'He commanded to seek the seven great altars of Armenia, and he honoured the sanctuaries of his ancestors, the Arsacids, with white bullocks, white rams, white horses and mules, with gold and silver ornaments and gold embroidered and fringed silken coverings, with golden wreaths, silver sacrificial basins, desirable vases set with precious stones, splendid garments, and beautiful ornaments. Also he gave a fifth of his booty and great presents to the priests.'*

In Bayazid (the ancient Bagravand) an old Armenian relief was found with an altar upon which a strange animal stands, and on each side a man clothed in a long tunic. One is beardless, and carries a heavy club. The other has a beard. Their head-gears, Phrygian in character, differ in details. Both of them raise their hands in the attitude of worship (Alishan, *op. cit.* p. 161).

The prevalent word for a pagan priest in Armenian, *k'urm*, is a loan-word from the Syriac *kūmrā*, 'priest,' although *mog*, 'magian,' may also have been used. The place of sacrifice was perhaps called *spandaran* (connected with Avesta *spenta*, 'holy'), a word which is now current only in the sense of 'slaughter-house.' This makes it possible that originally slaughtering had a sacrificial character. Christianity did away with all impure rites and human sacrifices which were of a local character, but animal sacrifices survived the fall of paganism (Conybeare in *AJTh* vii., 1903, p. 63).

In many of the sanctuaries, which, like the modern monasteries, were also places of religious hospitality, particularly in the country, sacrifices were distributed to strangers (Moses of Chorene, ii. 66). Besides animals, flower-wreaths and green twigs (the *barsom* of the Avesta?) were offered (Agathangelos, p. 49), and probably also fruit and money.

The priesthood must have been hereditary in a well-organized caste. There was a high priest, sometimes of royal blood (Moses of Chorene, ii. 53, 55), and the *Vahunis* are mentioned as a priestly family by Moses of Chorene (ii. 8), while another priestly family was perhaps that of the *Spandunis*. The priests were probably very numerous in temple-towns, and they certainly possessed great wealth and extensive lands and villages, which were later confiscated for the benefit of the Christian Church (Agathangelos, pp. 586 ff., 590, 594, 610). Of native Armenian magi as a caste

* Sacrifices were occasions of great rejoicing, and it would seem that not only the flesh of the animals, but also their blood, was consumed (Agathangelos, pp. 73–74; Faustus of Byzantium, iv. 4).

* The belief that the soul remains on earth for a year seems to be Muhammadan (Wolff, *Muhammed. Eschatol.*, Leipzig, 1872, pp. 73–79; cf. Rühling, *Beiträge zur Eschatol. des Islam*, Leipzig, 1895, p. 43); while the Iranians held that it journeyed to the place of first judgment at dawn of the fourth day after death (*Yasht* xxii. 7, 25; *Dātistān-ī-Dēnīg*, xx. 2–3; *Dīnā-ī Maīnōg-ī Khrat* ii. 114–115, 161; *Artā-ī-Virāf* iv. 9–15). The bridge in Armenian belief is obviously the *činvat*-bridge of the Avesta—which is fully described in *Dātistān-ī-Dēnīg*, xxi. 3–7, and which occurs not only in Iran but in India, mediæval Europe, and elsewhere (Scherman, *Materialien zur Gesch. der ind. Visionsliteratur*, Leipzig, 1892, pp. 102–110, 117–119; Becker, *Contribut. to Compar. Study of the Mediæval Visions of Heaven and Hell*, Baltimore, 1899, pp. 18, 44, 76, 83, 90, 97), as well as in Muhammadanism (Rühling, *op. cit.* pp. 62–63). The 'middle place,' moreover, finds its Iranian source in *Hamēstagān*, 'ever-stationary' (*Artā-ī-Virāf* vi.; *Shāyast-lā-Shāyast* vi. 2; *Dīnā-ī Maīnōg-ī Khrat* vii. 18–19, xii. 14; *Dātistān-ī-Dēnīg*, xxiv. 6, xxxiii. 2), where dwell the souls of those whose good and evil deeds exactly balance each other.

we have no record, although we read of magians (Moses of Chorene, ii. 48). The existence of priestesses in ancient Armenia is not absolutely certain, although we have the old compound *krmanuish* meaning 'priestess.'

A critical study of the Armenian Church calendar and ceremonies would probably reveal much that could be referred to the pre-Christian ritual. During Lent, for example, the morning service is opened with an abjuration of the devil and all his works—an elaborate formula, which is recited while the whole congregation turn their backs to the altar and look towards the west, with arms hanging rigidly at the sides. Although the abjuration is usual in the baptism of all ritualistic churches, this particular form may well have been derived from the ancient cult of the country. Evidently the Armenians considered the west as the abode of the devils, for Eznik says in his aphorisms (p. 313): 'Honey is sweet, but it harms a diseased body. Good counsel and rebuke are useful, but they do not benefit those who have set their faces westward.'*

The old Armenian calendar also bears traces of ancient Persian influence. *Trē* (Tīr), *Mehekan* (Mithra), *Ahekan* (Atarš), and *Hrotiç* (Pahlavi *Fravarṭigān*) are common also to the Persian year (cf. art. CALENDAR [Persian]). The other months of the ancient Armenian calendar have names of Armenian and perhaps also two of Caucasic (Georgian) origin (Hagopian, 'Armenian Months,' in *Banssēr*, 1900; Gray, 'On certain Persian and Armenian Month-Names as influenced by the Avestan Calendar,' in *JAOS* xxviii.). The names of the days of the month, as given by Shah Tchrped (Alishan, *op. cit.* p. 143), have but few points of contact with the Zoroastrian (*Yasna* xvi. 3–6; *Sīrōza* i.–ii.; *Bundahishn* xxvii. 24; *Shāyast-lā-Shāyast* xxii.–xxiii.; al-Bīrūnī, *Chronology*, p. 53).

The Armenians shared with the Persians some of the characteristic superstitions and usages of the Avesta. One of them is the evil eye (*Vendīdād* xx. 3, 7, xxii. 2; *Bundahishn* xxviii. 33, 36). In Moses of Chorene, ii. 47, we read that king Ervand had so powerful an evil eye that he could break stones asunder by looking fixedly at them. The general belief is that people upon whom the evil eye is cast pine away without knowing the cause of their ailment, and nothing is safe from it. There are special prayers and ceremonies to break the spell of the evil eye (Alishan, *op. cit.* p. 385; Abeghian, *op. cit.* pp. 123–127). The modern Armenians have the same abhorrence for parings of nails and hair as the Avesta (cf. *Vendīdād*, xvii.); nor may fire and water be defiled (Abeghian, *op. cit.* pp. 57–58, 66). These superstitions of the later Armenians, like many other beliefs noted above, were probably imported in ancient times. Among the greatest requirements of the Avesta we find next-of-kin marriages (cf. Justi in *Grundriss der iran. Philologie*, ii. 434–437; Jackson, *ib.* 682, and the references there given). The only well-known instance of this in Armenia is the marriage of Tigranes III. with his sister Erato, a few years before the Christian era, although it seems to have been frequent among the nobles (Moses of Chorene, iii. 20; Faustus of Byzantium, iv. 4).

V. *CONCLUSIONS.*—Our study suggests the following reflexions:—(1) Great as is the mass of Zoroastrian material in Armenian paganism, it has also serious gaps. Was it ever complete? (2) We find the existing material in a quite uncertain shape. The substantial deviations from Zoroastrianism are considerable, as in the case of Anahit and in the worship of fire and water. The Zoroastrian angels are full-fledged deities in Armenian paganism; but primitive traits are not lacking, as in the case of Spenta Armaiti. (3) There is no trace of a highly developed system of theology, ritual and legalistic observance, as in Zoroastrianism. Abstract beings, the personifications of ideas, virtues, and vices, are quite absent. We find no theological systematization of the heavenly army, no developed dualism, no caste of magi, and no widely spread fire-altars. (4) There is no record of any Zoroastrian propaganda in Armenia, or of any religious fellowship between Persia and Armenia. When the Sasanians persecuted Christian Armenia, abont A.D. 450, they said nothing about a return to the ancient faith, nor did the Armenians ever call their paganism Zoroastrian. (5) It is probable that Zoroastrianism gradually penetrated Armenia under the Achæmenian kings and under the Arsacids, but we have no exact knowledge as to when or how. (6) The study here presented must not be regarded as a complete picture of Armenian paganism. Both the pantheon and the world of minor spirits contained other non-Zoroastrian names and beliefs which have been omitted; but the old religion of Armenia was mainly Iranian, and may be described as Zoroastrianism of a corrupt type.

It is probable that the ancient Armenians themselves conceived their pantheon as containing the following deities: Aramazd, as chief god; Anahit, as chief and favourite goddess; Vahagn, as the national god of war and heroism; the sun and the moon; Mihr; and Tīr as the god of human destiny, whose relation to learning and eloquence has a Greek flavour. Deities of a lower magnitude of importance disappeared more easily from the popular memory. Along with these Persian deities, there were also an Elamitic goddess Nanē (the Babylonian Nanâ, cf. also the 'Persian' goddess Nanæa of 2 Mac 1[13]), the Syrian Astâik (Venus), and the Syrian Barsham (Ba'al-Shemîn). These three must have migrated into Armenia during post-Alexandrian times, perhaps *Doppelgänger* of some of the native deities, though whether they formed a group, Barsham-Astâik-Nanē, corresponding to Aramazd-Anahit-Vahagn, as Jensen (*Hittiter und Armenier*, p. 181 ff.) suggests, is a less plausible hypothesis. At all events they soon asserted themselves as independent and separate deities, so that Astâik could become the paramour of Vahagn and have a temple in the sacred town of Yaahtishat, where Anahit also had a sanctuary. After Alexander, and especially in Roman times, the Armenians came under strongly Hellenistic influences, and began to seek parallels between the Greek and their own deities. It would also seem that during this period the worship of the sun and the moon became somewhat neglected. Otherwise, we cannot understand why Agathangelos makes so little of them. The ancient Armenians were also very much given to divination and witchcraft (Moses of Chorene, i. 30, ii. 66; Ghan Mantaguni, *op. cit.* xxvi.; Alishan, *op. cit.* pp. 360–409).

M. H. ANANIKIAN.

ARMENIA (Christian).—I. *THE BEGINNINGS OF CHRISTIANITY.*—The national legends and traditions of Armenia are rich in information regarding the introduction of Christianity into the country.

* In the Avesta the north is the dwelling-place of evil spirits *Vendīdād* vii. 2, xix. 1; *Arṭā-ī-Vīrāf* xvii. 11).

In particular, it is said to have been preached by Apostles or disciples of Apostles, such as St. Bartholomew and St. Thaddæus. But it has been proved that these legends did not appear till late in the literature of Armenia, and that they were borrowed largely from the literature of Greece. Christianity certainly penetrated to Armenia, as elsewhere, by means of the living voice. The Apostles and their successors had early formed the habit of visiting the Churches founded by them; and the teaching of the gospel was continued and propagated in the Christian communities long before written documents came into use; but the names of these first preachers have not come down to us with any certainty. Yet, however meagre the information furnished by history may be, we are quite entitled to maintain that Christianity reached Armenia through Antioch, before the time of Gregory the Illuminator. The first Christian documents that the Armenians made use of were written in Syriac, and this language was used in the Armenian liturgy till the reform of Gregory the Illuminator. After Antioch we might mention Edessa and Nisibis as centres from which Christianity spread into the different provinces of the kingdom of Armenia.

LITERATURE.—The works, in Armenian and in translation, of Armenian writers: Koriun, Elisæus the Teacher (*Vartabed*), Eznik, Agathangelos, Lazarus of Pharpe, Seheos, Zenobius of Klag, Faustus of Byzantium, Moses of Chorene. A. Lipsius, *Die apokr. Apostelgesch. und Apostellegenden* (Brunswick, 1883–1890); A. Carrière, *La Légende d'Abgar dans l'histoire d'Arménie de Moïse de Khoren* (Paris, 1895); H. Gelzer, 'Die Anfänge der armen. Kirche' in *Berichte der königl. Sächs. Gesellschaft der Wissenschaften*, phil.-hist. Classe (1895); Petit,* fasc. vii. col. 1892–1893.

II. *EXTENSION OF CHRISTIANITY IN ARMENIA.* — **St. Gregory the Illuminator.** — Gregory the Illuminator belonged to the royal race of the Arsacids. When quite young he escaped the massacre of his family (A.D. 238), and took refuge in Roman territory. He studied at Cæsarea, and returned to Armenia when the kingdom was re-established under Tiridates II. (A.D. 261). After being persecuted for his faith, he attained to honour, and baptized the king and a large number of his subjects. He went again to Cæsarea, where he was consecrated bishop by Bishop Leontius, thus forming the link of spiritual connexion between the Cappadocian metropolis and the young Armenian Churches. When he was made bishop, Gregory fixed his residence at Yashtishat, and had a church and an episcopal palace built there. He substituted Armenian for Greek as the language of the liturgy, in order to have easier access to the masses of the people, and created twelve episcopal sees, at the head of which he placed, as titulars, converted pagan priests. He instituted ecclesiastical offices, making them hereditary in the sacerdotal families, and he created in his own family the supreme office of *Catholicos*. At first this title designated only the principal bishop of the country; later it came to mean an independent patriarch. The Gregorian and national Armenian Church, founded afterwards, lived its own autonomous life, while recognizing for some years a sort of supremacy in the mother Church of Cæsarea.

LITERATURE.—Mgr. Ormanian, *Le Vatican et les Arméniens* (Rome, 1873); von Gutschmid, *Kleine Schriften* (Leipzig, 1892); H. Gelzer, 'Die Anfänge der armen. Kirche' in *Berichte der königl. Sächs. Gesellsch. der Wissensch.*, phil.-hist. Classe (1895); Petit,* fasc. vii. col. 1893; S. Weber, *Die katholische Kirche in Armenien* (Freiburg, 1903); Malan, *Life and Times of St. Gregory* (Eng. tr. 1868).

III. *THE GREGORIAN ARMENIAN CHURCH.*— 1. **Doctrine.**—The creed of the Armenian Church is identical with the pseudo-Athanasian Creed which was introduced into Armenia by the Syrians, and in the 6th cent. took the place of the Nicene Creed. In the 14th cent. another creed was much in use in the Armenian Church. It was a compilation of formulas borrowed from various creeds, and was current until the middle of the 19th century. The religious heads of the Armenian Church several times formulated *professions of faith* intended to complete, explain, and fix the meaning of the Armenian Creed. We must mention the profession of faith addressed in 1166 by Nerses Shnorhali to Manuel Comnenus; that presented to pope Pius IV. by Abgar, the Ambassador of the Catholicos Michael of Etchmiadzin (1562–1563); that of the Catholicos Azarias of Sis (1585); that addressed in 1671 by David, the Armenian archbishop of Iṣfahān, to Louis XIV.; those addressed to the same king by Stephen and James, the Armenian archbishops at Constantinople (1671), and by Gaspar, the Armenian bishop of Cairo. On the other hand, the Roman Curia imposed on the Armenian Church two professions of faith: (1) the constitution of Eugenius IV., *Exultate Deo*; (2) the creed of Urban VIII., intended for all the Christians of the East.

LITERATURE.—Le chevalier Ricaut, *The Present State of the Greek and Armenian Churches, A.D. 1678* (London, 1679); E. Dulaurier, *Histoire, dogmes, traditions et liturgie de l'église armén. orientale*[2] (Paris, 1857); A. Balgy, *Historia doctrinæ catholicæ inter Armenos* (Vienna, 1878); Aršak Ter-Mikelian, *Die armen. Kirche* (Leipzig, 1892); J. Catergian, *De fidei symbolo, quo Armenii utuntur observationes* (Vienna, 1893); F. Kattenbusch, *Das apost. Symbol* (Leipzig, 1894); Hahn, *Bibliothek der Symbole und Glaubensregeln der alten Kirche*[3] (Breslau, 1897); Macler, Nos. 141, 145.

The following are the chief points of doctrine on which the creed of the Armenian Church differs from that of other Christian communities. As regards the Procession of the Holy Spirit, after much hesitation and even much indifference, the Gregorian Armenians profess that the Holy Spirit proceeds from the Father, and reject the *Filioque*. The Armenians reject the decisions of the Chalcedon Council relative to the Incarnation; they call themselves Monophysites, admitting only one nature in Christ. The Gregorians, in reciting the *Trisagion*, retain the addition *qui crucifixus es pro nobis*, while some Catholic Armenians have rejected it. The Gregorians deny *purgatory*, but they pray for the dead like the Catholics, consecrating to this devotion the day after Epiphany, Easter, the Transfiguration, the Assumption, the Exaltation of the Cross, and the day of the holy Vardanians.

There is diversity of opinion among the Armenian doctors regarding the primacy of the Pope. The patriarchs, being equal in power, are *co-ordinate* the one with the other, and not *subordinate* to a superior patriarch. The Churches were founded by the Apostles and their disciples. These were sent by Jesus Christ, not by Peter; thus nothing enjoins the primacy of the Pope as a fundamental dogma of the Christian Church. The Armenians *baptize* by immersion, repeated at the name of each of the Divine Persons; hence a triple immersion. The anointing is with holy oil, and the person baptized receives the name of the saint whose festival is celebrated on the day of the baptism. Only the priest can baptize, and baptism may be administered even to a child already dead. *Confirmation* follows very soon after baptism. The anointing is done on the forehead, the eyes, the nostrils, the ears, the mouth, the shoulders, the breast, the hands, and the feet. Each anointing is accompanied by a special formula. The Armenians make use of unleavened bread and of wine unmixed with water as elements for the Eucharist. They make confession principally on the occasion of the great festivals, preferably at Epiphany or at Easter. They admit in theory the sacrament of *Extreme Unction*, but they never

* In this art. the foll. abbrevv. are used:—Petit=L. Petit, 'Arménie' in *Dict. de théol. catholique* (Paris, 1902); Macler=F. Macler, *Catalogue des manuscrits arméniens et géorgiens de la Bibliothèque Nationale* (Paris, 1908).

administer it. The Gregorians have a hierarchy of orders very carefully organized, including the office of precentor and reader; then the inferior orders of porter, reader, exorcist, and candle-lighter; and the superior orders of sub-deacon, deacon, and priest. The consecration of bishops is reserved for the Catholicos. Marriage is permitted to the inferior clergy, rigorous celibacy being enjoined only on the vartabeds and the bishops. Women are not excluded from the functions of the deacon. In Anatolia the Catholic Armenian priests are generally married; elsewhere they observe more freely the law of celibacy, which is not obligatory on them. When a priest has to say Mass, he passes the preceding night in the church. When a priest who is already married has to receive ordination, he spends forty days in the church; then there is a social repast, during which the wife of the priest sits on a stool, and keeps her mouth, her eyes, and her ears shut, as a sign of the reserve which she exercises with regard to the functions of her husband.

Issaverdenz, *Rites et cérémonies de l'église arménienne* (Venice, 1876); Petit, fasc. vii. col. 1950–1958.

2. Councils.—Besides the councils common to Christianity, the Armenian Church has national councils, of which the following are the most important. Setting aside the traditional accounts relative to the first councils, the authenticity of which is more than doubtful, we must mention the Council of Yashtishat (*c.* 365 A.D.), held under Nerses the Great. Regulations were laid down regarding the laws of marriage, fasting, hospitals, and the schools where the young were taught Greek and Syriac. The laws for the monastic orders were there determined. Later, Sahak is said to have promulgated in A.D. 426, at a Council of Valarshapat, a certain number of rules intended to regulate the observance of festivals, funeral feasts, and the conduct of the clergy and priests. The canons of the Council of Shahapivan (A.D. 447) have for their special aim the refutation of the heresies which invaded Armenian Christianity and threatened to extinguish it. This was also the aim of the Council of Yashtishat (A.D. 449). At the Council of Valarshapat (A.D. 491) the Armenians made common cause with the Georgians and the Albanians in condemning the Council of Chalcedon; and this decision was maintained and affirmed still more definitely at the Council of Tvin (A.D. 525), where the two festivals of Christmas and Epiphany were fixed for the 6th of January. In A.D. 596 another Council of Tvin condemned the Chalcedon decrees. At the Council of Karin (*c.* 633 A.D.), Heraclius summoned the Greeks and Armenians, and had the union between these two nations proclaimed; the festivals of Christmas and Epiphany were fixed for different days, and the formula *qui crucifixus es pro nobis* was removed from the Trisagion. Another Council of Tvin (A.D. 645), condemned once more the Council of Chalcedon. John of Odzun, who is said to have summoned the Council of Manazkert about A.D. 719, gathered into a volume the canons of the Fathers and of the councils previous to the 8th century. About A.D. 770 the Synod of Partav fixed the books of the Old Testament which the Armenians regarded as authentic, and made rules relating to certain details of ecclesiastical discipline. At the Council of Shirakavan, held in A.D. 862, the Armenians accepted the decrees of the Chalcedon Council, anathematized the Councils of Manazkert, settled the articles of their faith in fifteen canons, and made peace with the Greeks. In the reign of Manuel Comnenus, several attempts were made to bring about a union between the Greeks and the Armenians. They resulted in the Council of Rom-Kla (A.D. 1179), at which Nerses of Lambron delivered a discourse on conciliation which is still famous. At the Council of Tarsus (A.D. 1196), Nerses of Lambron delivered another discourse with a view to the union. The Council of Sis (A.D. 1243) laid down rules regarding the election and nomination of priests, bishops, etc.; the Councils of A.D. 1307 and 1316 ratified the preceding ones, and furnish a complete profession of faith of the Armenian Church at this time. In A.D. 1439 the Armenians took part in the Council of Florence.

Along with these principal councils there were a number of special councils and synods, for the decrees of which we refer our readers to the works which deal specially with them.

3. Festivals.—The Armenian Church celebrates five principal festivals: Christmas, Easter, Transfiguration, Assumption, and Exaltation of the Holy Cross. The day before these festivals is devoted to the Church, the day after to the commemoration of the dead.

The day before Christmas the poor boys of a village or town go from door to door, or from terrace to terrace, holding in their hands lanterns made from gourds, sing a Christmas carol, and receive fruit and cakes as a reward.

The festival of the Transfiguration (*Vardavar*) is called the Festival of Roses, after an old heathen festival which was celebrated on the same day. On the day preceding this festival, the commemoration of the Tabernacle of the Jews is held. On that day people sprinkle each other with water when they meet in the streets; and in certain provinces of Armenia pigeons are set free, either in recollection of the Deluge, or as a symbol of Astlik, the Armenian Venus.

On the day before the Assumption, the vision of Gregory the Illuminator is commemorated.

According to the canons of the Armenian Church, the priests are allowed to receive as offerings the skin and the right shoulder of the animals sacrificed in the churches on the days of the great festivals, in commemoration of the souls of the dead, or in honour of some great saint.

Other festivals play an important part in the religious life of Armenia. The day before *Candlemas* (Presentation in the Temple), fires are lit in the courts of the churches, and the people dance round them, jump over them, and so on.

The festival of *Vičak* (Fate) is one of the principal Armenian festivals, and one of those which seem to be relics of pagan times. It begins on the day before Ascension Thursday, and lasts till the

Sunday of Pentecost. The day before Ascension the young girls of the village meet together and choose several of their number to organize the festival. The members of this committee take a pitcher made of baked clay, fill it with water drawn from seven fountains or seven wells, and close the mouth of the pitcher with flowers gathered from seven fields; then each of the girls throws some object into it (bracelet, ring, button, bead from a rosary, etc.), wishing at the same time some good wish for her father, brother, or sweetheart. They have to shut their eyes while throwing the object into the pitcher and meditate deeply on their wish. On the Wednesday or Thursday night they hide the pitcher in the corner of a garden in the open air, to expose it to the influence of the stars, and they watch that it is not taken by the boys, who prowl about there all night, and try to discover it and carry it off. If the young men succeed in taking it, they give it back to the girls only in exchange for a large quantity of eggs and olive oil, which they have to offer. If, on the other hand, the young men do not succeed in getting possession of the pitcher, the girls sing songs in which they are made fun of (A. Tchobanian, *Chants populaires arméniens*, pp. 57–59; M. Abeghian, *Armenischer Volksglaube*, Leipzig, 1899, pp. 62–66.

Marriage, baptism, and burial are family festivals which are the occasion of special ceremonies and customs in Armenia.

(*a*) *Marriage.*—'Among the Armenians, children are betrothed from their earliest youth, sometimes when only three years old, sometimes as soon as born. When the mothers on both sides have agreed to marry their son and daughter, they propose the union to their husbands, who always sanction the choice of the wives. The mother of the boy then goes to the friends of the girl, with two old women and a priest, and presents to the infant maiden a ring from the future bridegroom. The boy is then brought, and the priest reads a portion of the Scripture, and blesses the parties. The parents of the girl make the priest a present, in accordance with their means, refreshments are partaken of by the company, and this constitutes the ceremonies of the betrothals. Should the betrothals take place during the infancy of the contracting parties, and even should twenty years elapse before the boy can claim his bride, he must every year, from the day he gives the ring, send his mistress at Easter a new dress,' etc. (Jones, *Finger-ring Lore, historical, legendary, anecdotal*, Lond. 1877, p. 312 f.).

It frequently happens that the bridegroom-elect does not see his betrothed during the engagement. On the marriage day a priest and a sub-deacon go to the house of the bride. The bridegroom arrives there with great pomp, and receives for that day the title of *king*, while the bride is called *queen*. The latter is then veiled, the priest says some prayers and blesses the young husband and wife, and then they set out for the church, where the nuptial blessing is pronounced and Mass is celebrated. The priest places on the head of each a crown, which they retain from three days to a week. The company sing wedding hymns on the way to and from the church. After a few days the priest goes and receives back the crowns, and then the young people's married life begins. Marriage cannot be celebrated during fasts or the dominical festivals, of which there are about 260 in the year.

(*b*) *Baptism.*—A short time after the birth of a child, the parents and the god-father carry him to church. They stop at the entrance, and the priest recites some prayers, after which they go into the church, making as many genuflexions as the number of days of the child's life, and the god-father makes confession. Then the infant's clothes are taken off, and he is immersed three times, his head turned towards the west, his feet towards the east, and his face towards the sky. After the baptismal water the priest anoints the child's head several times with holy oil, and clothes him in a linen robe. The child is then made to adore the Cross, and is taken home in state.

(*c*) *Burial.*—The day before that on which the body is to be carried to the church, the relatives, neighbours, and friends of the deceased meet in the house, each bringing a lamp with three or seven wicks, which they arrange, all lighted, round the coffin, and then they begin to sing in turn some funeral hymns. On All Souls' days (Christmas, Easter, Assumption, Transfiguration, Invention of the Cross) the families invite a popular poet to sing over the grave at the cemetery the praises of the person who has just died (A. Tchobanian, *op. cit.* p. 119). For some days after the funeral ceremony the priest goes to visit the relatives of the deceased; then on the Saturday of this week of mourning the relatives and friends meet and take part in a social repast, the remains of which are distributed among the poor.

LITERATURE.—E. Boré, *Arménie* (Paris, 1838); J. Issaverdenz, *Rites et cérémonies de l'église arménienne* (Venice, 1876); Petit, fasc. vii.; A. Tchobanian, *Chants populaires arméniens* (Paris, 1903), *Les Trouvères arméniens* (Paris, 1906), p. 130; F. C. Conybeare, *Rituale Armenorum* (Oxford, 1905).

4. **Saints of the Armenian Church.**—A glance at the Armenian Menology will suffice to show that the Armenian Church has adopted a large number of the saints of the Greek and Latin Churches. It has, besides, its national saints, for whom it has naturally great veneration. The principal of these are St. Rhipsime and St. Gaiana, who fled from Rome to avoid the carnal desires of the Emperor, and took refuge in Armenia, where their blood was shed for the cause of the gospel; the saintly translators, Moses of Chorene, David the Philosopher, Eznik of Kolb, Elisæus the Vartabed, St. Mesrop; and St. Sahak, St. Leo, St. Nerses Shnorhali, St. Nerses of Lambron, St. Gregory the Illuminator, and St. Nerses I. the Great. St. Vardan is the national saint and patriot *par excellence*. When Armenia was struggling in the 5th cent. against Persia and the introduction of Mazdaism, Vardan Mamikonian became the moving spirit in a general insurrection and in the struggle of Armenian Christianity against the Zoroastrian religion. He perished at the battle of Avarair; but the agitation for independence started by him continued for many years. St. Sarkis (Sargis or Sergius) is the saint invoked by prisoners, captives, those with difficulties to face, and especially by young girls in order to obtain a handsome sweetheart. If it snows at the festival of St. Jacob or St. James, it is said that the beard of the saint is falling on the earth. St. Karapet (John the Baptist) is regarded in Armenia as the most influential of the saints. His seat is at Mush, where his relics are found in the church named after him, which is one of the principal places of pilgrimage of the Armenians. Women are forbidden to enter the enclosure within which is the tomb of the saint, because it was women, Herodias and Salome, who caused John the Baptist to be beheaded. Young girls give a needle to friends going to kiss the tomb, begging them to rub it against the tombstone, so that they may be able with this sanctified needle to produce marvellous embroidery. Young women cannot go and kiss the tomb unless they make a vow never to marry. Those who have made this vow are allowed to sing with the choir during Mass (A. Tchobanian, *Chants populaires arméniens*, p. 149, n. 1). According to John Mamikonian, a very pious Armenian princess who was determined to enter the sanctuary was almost immediately smitten by Heaven as a pun-

ishment for her presumption (V. Langlois, *Collection des historiens anc. et mod. de l'Arménie*, i. 348, 362 f.). St. Karapet is the patron of the bards (*trouvères*), who go on pilgrimage to ask him to heighten their poetic imagination.

LITERATURE. — H. F. B. Lynch, *Armenia, Travels and Studies* (London, 1901); A. Tchobanian, *Les Trouvères arméniens* (Paris, 1906); 'Zenob de Klag' and 'Jean Mamikonian' in V. Langlois, *Collection des historiens anc. et. mod. de l'Arménie* (Paris, 1867), t. i.

5. Sects.—Armenian Christianity, in the course of the centuries, has had to struggle against the assaults of different sects and heresies in order to preserve its homogeneity. Gnosticism penetrated into Armenia in the 2nd cent.; Marcionism also crept into the Armenian Church and was refuted by Eznik (*Des Wardapet Eznik von Kolb, wider die Sekten*, tr. by Joh. Michael Schmid, Vienna, 1900, p. 172). About the same time are found traces of the Borboriani and the Messalians, of which sects the Paulicians seem to be a continuation through the Middle Ages. Mention is made also of the existence of Adoptianist churches as early as the 3rd century. The most important sect of the Middle Ages was that of the Paulicians, famous for their struggle against the worship of images. It has been established by Conybeare that they were Adoptianists. They believed that Jesus was born a man, and that He became Christ at the moment of His baptism; but they did not regard Him as equal to God the Father. The Paulicians practised adult baptism. The Thondracians, a sect founded about A.D. 820 by Smbat, rejected infant baptism, the worship of the saints, of the Virgin and of images, purgatory and the hierarchy. There still exist in the Caucasus some adherents of this sect. The Arevordians ('Sons of the Sun') are met with in the 12th cent.; their doctrine recalls the old ideas of Armenian paganism.

6. Superstitions and Peculiarities. — The Armenians, although Christians, have, like other Christian peoples, popular beliefs and superstitions which have passed down through the ages. The peasant women believe that there exist three *spirits of childbirth*—the spirits of the evenings of Tuesday, Thursday, and Saturday. The first two are virgins and sisters, and the third is their young brother. If the wives have not spent the evenings of Tuesday, Thursday, and Saturday with their husbands, these spirits aid them in childbirth. The Sunday spirit remains near the door of the birth-chamber and fulfils all his sisters' orders; he carries water and eggs, makes the fire, etc. The two sisters take the child, bathe it and prepare the omelet for the mother; and sometimes they present a gift to the newly-born child. But these spirits are also vindictive; and when a woman does not respect them, they avenge themselves by tormenting her, and sometimes by killing the baby (*Revue des traditions populaires*, x. [1895] 2). Each child has from its birth a guardian angel who protects him against evil spirits. This angel's duty is to cut the child's nails and amuse him with the golden apple which he holds in his hand. When the child is old enough, the guardian angel goes back to heaven. The child smiles to him and stretches out his little arms (*ib.* x. 4). The Armenian peasants believe also that *spirits of disease* exist. They are small in stature and wear triangular hats; and they hold in their hands a white, a red, and a black branch. If they strike any one with the white branch, he will fall ill, but will soon recover; if it is with the red, he will have to stay in bed for a long time; but if it is with the black, then it is all over with him, and nothing will cure him. The spirits have books in which are written the names of the men who must die or fall ill, and the appointed days; and the spirits act according to these books. The people believe also that there is a spirit called the 'Writer' (*Grol*), who writes men's names and the date of their death in a book called the 'book of the non-existent.'

The *devs* are tyrants possessing seven heads. They can throw the largest rocks a great distance. Their wrestling is like the shock of mountains, which causes lava to pour forth. The female *dev* is about the size of a hill; she throws back her left breast over her right shoulder, and her right breast over her left shoulder. The *devs* prefer to dwell in very thick forests or deep caverns. They are very rich in gold and silver, and possess horses of fire which enable them to cover great distances in the twinkling of an eye. *Devs* covet the company of young women of the human race, to whom they grant everything they ask. The young men are continually at war with the *devs* in order to get back the women, who show the men how to carry out ruses by which they may become the masters of the *devs*, who are ignorant, cowardly, boastful, and narrow-minded (*RTP* x. 193–196; Grikor Chalatianz, *Märchen und Sagen*, Leipzig, 1887, pp. xiv–xx). The witches are old women who have a tail which is not visible during infancy, but which develops with age. They can become invisible when they wish, enter anywhere, and cross the world in a few minutes. They mount on earthen jars, take in their hands a serpent which serves as a whip, and, flying to the seventh heaven, pass over all the universe. They act chiefly in love intrigues. Their ordinary business is to enchant the heart of a young man or woman, carry off a young girl in spite of her parents, and kill the irreconcilable rival or make him fall asleep (*RTP* x. 196). There are also good sorcerers, who are quite disposed, with the aid of supernatural powers, to render service to human beings (G. Chalatianz, *Märchen und Sagen*, p. xxxi ff.; F. Macler, *Contes arméniens*, Paris, 1905). The Armenians believe also in the existence of dragons, and possess numerous tales and legends which refer to these supernatural beings. The Armenians, especially those of Eastern Armenia, make great use of *rolls of prayers* containing magical or talismanic formulas, intended to protect them against the evil eye, slander, the anger of enemies, against sorcerers and enchanters, false love, and the bite of serpents, to conciliate lords, kings, generals, and the great, and to exorcize demons and other impure beings. These rolls of prayers are called *kiprianos*, or rather *girpaharan*, because they include prayers attributed to St. Cyprian. They are generally ornamented with vignettes, which belong to somewhat rudimentary art, but are very much used by the people (see 'Amulette' and 'Cyprianus-Buch' in P. Jacobus Dashian, *Catalog der armenischen Handschriften in der Mechitharistenbibliothek zu Wien*, Vienna, 1895; Macler, Nos. 97–102).

Chalatianz, *Märchen und Sagen* (Leipzig, 1887); H. von Wlislocki, *Märchen und Sagen der Bukowinaer und Siebenbürger Armenier* (Hamburg, 1892); A. G. Seklemian, *The Golden Maiden, and other Folk-Tales and Fairy Stories told in Armenia* (Cleveland, Ohio, 1898).

IV. *ARMENIAN CATHOLIC CHURCH OR ARMENIAN CATHOLICS.*—There have been in almost all times Armenians who recognized more or less the supremacy of Rome. But it was recognized

only in a sporadic and casual way until the time of the Crusades, when the Armenians of the kingdom of Cilicia, or Lesser Armenia, were in constant contact with the Crusaders, and consequently with the Roman Curia. Later, in the 14th cent., Dominican missionaries founded influential communities of disciples in Armenia. These were the class of native missionaries known as 'Uniters' (*unitores*), and had as their first superior John of Kerni (or of Khrna). He had a translation made of the works of Bartholomew of Bologne, who was sent to Armenia by Pope John XXII. in 1318 (Macler, No. 149). Subsequently, especially in the 17th cent., other orders established missions among the Armenians, particularly among the Armenians of Persia: the Augustinians at Iṣfahān, the Jesuits at Iṣfahān, Julfa, Erivan, etc. The French Lazarists settled at Tauris and at Iṣfahān. Soon all the communities extended their ramifications into all the principal Armenian centres of the East—Iṣfahān, Ormuz, Shiraz, Banderabbas, Hamadan, Shamakia, Erzerum, Trebizond, etc.

Until the middle of the 18th cent., Catholic Armenians did not form an autonomous community; now they have a hierarchy of their own, a recognized religious autonomy, and a patriarch who resides at Constantinople. These results have sprung from the dissensions which occurred between 1737 and 1740 in connexion with the catholicate of Sis in Cilicia. The Catholicos of Sis was deposed, and he retired to Lebanon, where he founded the convent of Bzommar and a new religious order. This new state of things caused intestine quarrels between the Catholic and the Gregorian Armenians. We may note especially the quarrel of the Hassunists and the publication of the Bull *Reversurus*.

Macler, *Catal. des manuscrits armén. et géorg. de la Bibliothèque Nationale* (Paris, 1908).

V. *PROTESTANT ARMENIANS.*—The work of the Protestant missions among the Armenians dates from the beginning of the 19th century. It was specially prosperous from the day on which the Sublime Porte granted independence to the Protestant community. The Protestant missions in Armenia belong, on the one hand, to the Missionary Societies of England and America, and, on the other, to those of Basel. They have stations in the most important centres of Turkey in Asia, and some in Persia (Tauris, Teherān, Iṣfahān), and in Russia (Shusha, Tiflis). There are nearly 200 pupils in the Robert College at Constantinople; the college at Scutari is reserved for girls.

VI. *MUSALMĀN ARMENIANS.*—The attachment of the Armenians to Christianity is well known, and when they are abroad their religion stands to them in the place of nationality. In spite of this love of their religion, some Armenians, persecuted by the Musalmāns, have adopted Muhammadanism. Thus, two or three centuries ago, the Armenians of Hamshen, to the east of Trebizond, after some bloody massacres, accepted in thousands the law of Islām. They are therefore Turks, but they speak a dialect which betrays their Armenian origin. The Kurds, it is said, are ancient Armenians who have passed under the law of Islām.

About 1751, a certain Chalabi, who was very fanatical, associated himself with the Persian Musalmāns, and conceived the plan of massacring the Armenians if they would not be converted to Muhammadanism. He tortured them first, cutting off their ears so that they might not hear the singing in church, cutting out their tongues so that they might not speak their mother language, and putting out their eyes to strike fear into the other Christians. Chalabi inflicted these tortures on the poor, and granted honours and titles to the rich to impose silence on them. By this means thousands of Armenian families became Musalmāns, especially in the province of Oudi. In this province above all, the Muhammadans destroyed the churches and Christian sanctuaries, so that the Christians might the more quickly forget their original religion. In the province of Oudi many names recall their Armenian origin; at Gis is found a much venerated sanctuary of St. Elisæus. The Musalmāns as well as the Christians make pilgrimages to it, light candles, and address very fervent prayers to the saint; and in several villages in the neighbourhood of this sanctuary the Musalmān Armenians swear by St. Elisæus. They have preserved some old Christian customs. For example, when a mother is putting her child to sleep, she makes the sign of the cross over it, and murmurs the name of Jesus. When the paste is prepared, a young Armeno-Musalmān wife makes a cross on it with her fore-arm before putting it into the oven. The Armeno-Musalmān villagers of the province of Oudi are very bigoted and very suspicious; they distrust all foreigners, and never speak of matters of religion.

In Lasistan, also, several Armenian villages have become converted to Islām, from fear of tortures and massacres. There are found among them the same traces of Christianity as among their brothers of Oudi and elsewhere.

VII. *ARMENIAN COLONIES.*—There are Armenian colonies spread over all parts of the world; for example, in Europe: Poland, Sweden, Denmark, Holland, Russia, Turkey, Bulgaria, Transylvania, Roumania, Lower Danube, Macedonia, Greece, Dalmatia, France, Italy, Spain, Portugal, etc.; in Asia: Persia, Afghanistan, India, Japan, Palestine, China, etc.; in Africa: Egypt, Ethiopia; in America: United States; the English and Dutch Indies, Batavia, etc. These colonists generally lose their nationality, and adopt that of the country in which they are living; but they remain faithful to their religion, which is now the bond of the Armenian nation, since they no longer have a political autonomy.

LITERATURE.—L. Alishan, *Sisacan* (Venice, 1893).

FRÉDÉRIC MACLER.

ARMINIANISM.—1. Occasion of Arminianism.—Arminianism was a revolt against certain aspects of Calvinism, of far-reaching importance in the history of the Reformed Theology. It took place in the dawn of the 17th century. Against the Catholic absolutism of the external Church, Calvinism had set the absolutism of the eternal decrees. The situation was rigid with a new dogmatism. A recoil was inevitable. Many symptoms of dissent were manifest before Arminianism arose as a definite reaction. After Calvin's death, the more rigorous Calvinistic divines, including Beza, asserted that the Divine decree to salvation, being antecedent to the Fall, required for its

accomplishment the decree to sin. Sin was ordained not as an end, but as a means; it is here because there was something that God could not accomplish without it. What is first in the Divine intention is last in the Divine execution.* The primal purpose was the decree to save. But if man is to be saved, he must first be lost. Hence the Fall was decreed as a consequence of a decreed salvation. Those who held this position were Supralapsarians. It is doubtful whether Calvin himself held it. More moderate exponents of Calvinism connected the Fall with the permission of God, instead of with His foreordination. The Divine decree takes the existence of sin for granted, deals with man as fallen, and elects or rejects him for reasons profoundly indifferent to human judgment. This was the Infralapsarian position. An unequal rivalry between the exponents of these two schools was the immediate occasion of the rise of Arminianism. In Holland, which, in the 17th cent., owing largely to the immigration from France of Protestant theologians of distinction, had become, more than Switzerland, the centre of theological activity, the extreme views of the Supralapsarians found much favour. An acute and effective criticism was directed against them by James Arminius (Jacobus Arminius or Jakob Harmensen or Van Herman; also known as Veteraquinas, from *Veteres Aquæ* or Oudewater, the name of his birthplace). Arminius, who was born in 1560 and died in 1609, was a scholar of considerable reputation. He had studied at Leyden, resided at Geneva, and travelled in Italy; he was a learned and popular preacher at Amsterdam, with a pastoral career marked by fidelity and heroism; eventually he became, in 1603, professor of theology at Leyden. Even his enemies testified to his blameless and noble character. He was a consummate controversialist and a lucid expositor, with a remarkable gift of method. Trusted by the Supralapsarian leaders, he was requested in 1589 to answer Theodore Koornhert, of Amsterdam, who had attacked the high Calvinistic doctrine of Beza and the Genevan school, of which Arminius had been a distinguished disciple. Others had already replied to Koornhert, who were disposed to surrender Beza's extreme position in favour of one equivalent to Infralapsarianism. In preparing his reply, a process of doubt culminated in Arminius embracing the tenets he had undertaken to refute. He clearly perceived that the doctrine of the absolute decrees involved God as the author of sin; that it unworthily restrained His grace; and, leaving myriads without hope, condemned them for believing that for them there was no salvation either intended or provided in Christ. He saw, moreover, that it gave to those who believed themselves to be the elect a false security based upon no sufficient ethical principle. Arminius' conversion was succeeded by cogent criticism; and criticism by prolonged controversies, during which he was led by successive and careful stages to a luminous and impressive constructive exposition of those theological positions antagonistic to Calvinism which have since been associated with his name. Though it is probable that Arminius himself was less Arminian than his followers, yet the most distinguished of these, Episcopius (his successor at Leyden), Uyttenbogaert (his close friend), Limborch and Grotius, who most ably elaborated his positions—all men of great talents—only carried his conclusions to issues which the early death of Arminius probably prevented him from reaching. Arminianism spread amongst the clergy. Political differences and difficulties confused the purely doctrinal issue. Great statesmen, like Olden Barneveld, advocated Arminianism and Republicanism, as Calvinists preferred Supralapsarianism and Maurice, Prince of Orange. The martyrs for Arminianism probably suffered for political rather than for doctrinal heresy. From the beginning the Arminians were greatly outnumbered by their opponents. Their main strength lay in the genius and learning of their leaders. Dialectically they were victors; ecclesiastically and politically they were vanquished. With their defeat came many disabilities and some temporary persecution.

* *Cambr. Mod. Hist.* ii. 717.

2. **Doctrinal positions.**—The creed of the Arminians was set forth in the Five Articles of the Remonstrance addressed in 1610 to the States-General of Holland and West Friesland, from which fact its adherents received the name of Remonstrants. The articles were drawn up by Uyttenbogaert and signed by forty-six ministers. The Remonstrance is first negative, stating the five Calvinistic articles in order to reject them, and then positive, stating the five points of the Arminian position. Briefly summarized, the following are their positions. The first asserts conditional election, or election dependent on the foreknowledge by God of faith in the elect and of unbelief in those who are left in sin and under condemnation. The second asserts universal atonement in the sense that it is intended, although it is not actually efficient, for all. The third asserts the inability of man to exercise saving faith, or to accomplish anything really good without regeneration by the Holy Spirit. The fourth declares that the grace of God is indispensable in every step of the spiritual life, but that it is not irresistible. The fifth asserts that the grace of the Holy Spirit is sufficient for continual victory over temptation and sin; but the necessity of the final Perseverance of all believers is left doubtful. This last article was afterwards so modified by the followers of Arminius as to assert the possibility of falling from grace.

Gomarus, the university colleague of Arminius, but his chief antagonist in personal controversy, now engineered a counter-Remonstrance drawn up in less moderate terms. Negotiations for peace failed. An embittered controversy became involved with political intrigue. The famous Synod of Dort was assembled (1618–9) more to exercise ecclesiastical discipline than to reconcile the disputants. The Arminian theologians were excluded, and the Synod constituted itself accuser and judge. The Arminian articles were condemned, their preachers deposed, and recalcitrants banished. The Synod promulgated five heads of doctrine of its own, which present Calvinism in its unadulterated but not in its extreme form. Within the Arminian system processes of development set in, all moving in the direction of liberalism and comprehension. These will be noted in their place. Our present interest is with the leading principles of Arminianism. These are: (*a*) the universality of the benefit of the Atonement; (*b*) a restored freedom of the human will as an element in the Divine decrees and in opposition to the assertion of the absolute sovereignty of God. Apart from these and kindred questions involved in the problem of predestination, Arminianism has no definite theological distinctness. It attempts no fresh statement of the doctrines of God and man. These were accepted as they stood in the recognized creeds and confessions of Christendom; its general theological system was that of the orthodox Protestant Churches. But its specific contribution was of sufficient importance to rank it amongst the few really outstanding and permanent developments in theological thought. The three fundamental terms of theological definition and discussion—God, Man, and the essential re-

lations between them—are represented in the three great controversies of historical theology by the names of Athanasius, Augustine, and Arminius. Athanasius represents the movement which gave specific definition to the Church's doctrine of the Divine nature. Augustine stands as the great exponent of the inner moral significance of human nature and of the relation of the individual to the race. Arminius found his place as the interpreter of the ethical relations between God and man. His system recognized and expounded the developed doctrine of God and of man, which the Church had long accepted as established positions, but which her theologians had never satisfactorily related. Calvin had revived Augustinianism, and had pushed it to further logical issues. He made much of God, as Pelagius had made too much of man. Both gave isolation and distance to terms that could be completed only in mutual relations. Neither provided a scheme of reconcilation. The aim of Arminius was to express with dialectic vigour the only doctrinal position consistent with the necessary relations between God and man. This relation within the sphere of the provision and administration of redemption provided the points of controversy between his system and that of Calvin. The mission of Arminianism was to show how God could be what the Church taught He was, and man what the Church declared him to be, at one and the same time. The mode of re-adjustment of the disturbed and abnormal relations of man to God by justification was the central point of Protestant theology generally; the announcement and the ethical interpretation of the significance of the mutual relations between God and man in that adjustment was the contribution to theology offered by Arminianism. Its system is a *via media*; it strove to avoid sources of inevitable and historical error arising from the tendency to magnify either of the related terms by the virtual or formal suppression of the other. The exaltation of the Divine agency to the complete suppression of the human in that adjustment issued in simple Determinism; the exaltation of the human in complete suppression of the Divine in the same sphere led to the extreme positions of Pelagianism. Arminianism claimed to have stated, for the first time, with scientific care a balanced judgment on those relations of God and man in which their harmony and mutual recognition could be stated as a working principle, verifiable and verified by experience.*

To appreciate the *theological* value of Arminianism, it is important to review and interpret the points which differentiate it from Calvinism. To estimate its influence philosophically, it is needful to state and illustrate its two great principles—its ethical recognition of justice, and the emphasis it lays upon the human in the redemptive relations between God and man.

3. Criticism of Calvinism. — Arminianism regarded the Calvinistic position as open to attack on two sides—the side of God and the side of man. Its treatment of these was considered to be disproportioned and ethically unfair. The sphere in which God exercised His will was the soul of man. That will, therefore, concerned man and his acts. If such acts were performed solely because God had so determined, two consequences followed:—the acts would reveal the quality of the will, and man would not be consciously free; he would know himself as an instrument rather than as an agent. The criticism was urged therefore as much in the interest of man and of morality as of theology. In fact, Arminianism was at the bottom an attempt to formulate a protest against Calvinism from an ethical standpoint. It used much circumspection in the attempt. It carefully rejected, with Calvinism itself, the pagan leaven, which had lingered in the old Church, in the form of reliance placed upon human nature alone. But it renewed the sense of reality to human responsibility, and emphasized the moral conditions of reward and penalty. At the same time it sought to give psychological consistency, especially by its great doctrine of prevenient grace, to the common Protestant principle that man is entirely dependent, in all that concerns his salvation, upon the grace of the Spirit of God. The task undertaken by Arminianism was to re-state what was regarded as the primitive and Scriptural view, held by the Church before Augustine, concerning the relation between God and man in the work of salvation; and in this view the sole responsibility of man for his own damnation was evident. The criticism of Calvinism, therefore, found centres of attack in the following five points:—

(1) *Predestination.*—This the Calvinist held to be absolute and unconditioned. The decree to elect was without foresight of faith or of good works. In its operation the Divine will was unmotived from without, moved only from within, either by the grace or by the necessity of the Divine nature. The decree to reprobation was conditioned by no specific demerit of the reprobate. He was not distinguished in or by his personal sin. His reprobation was simply because of sinfulness of nature or habit, which, being common to all men, involved all men in equal guilt and penalty. No ethical difference was discernible between elect and reprobate. The Arminian criticism insisted on the ethical incompleteness of this view. The principle of the election of grace is maintained. The Divine will is absolutely supreme. But its supremacy is moral. God is not more bound to punish than to forgive. The Divine decree, whether elective or reprobatory, is conditional throughout. God elected to salvation or to reprobation only those whose faith or final disbelief He foresaw. The Divine foreknowledge logically precedes the Divine volitions; it is not an inference from them; it is intuitive, but not necessitative. What God knows, though its issue is absolutely certain, is not necessitated by that cognition.

(2) *Atonement.*—The Calvinist held the Atonement to be strictly limited. Its relation to the non-elect was incidental; its intention was for the elect alone. For them its efficacy was absolute. It so satisfied Divine justice on their behalf that they could not fail to be saved. For were any lost, the penalty of sin would be twice inflicted—once upon Christ and again on the sinner for whom He had died. This was a thing impossible to Divine justice. The Arminian held that the Atonement was universal. It was of infinite value, designed for all, accomplished for all. It made the salvation of no man actual, but rendered the salvation of all men possible, the result being in every case conditioned by faith. Christ died for all, but only believers receive the benefit.

The character of Arminian theology is illustrated in one of its most important writings, the treatise of Grotius on the *Satisfaction of Christ*, written in opposition to Socinianism. He develops the doctrine towards an issue not strictly in harmony with the position of Arminius, by stating what is known as the Governmental Theory. Both aimed at mediating between the rigorous Anselmic view of a satisfaction which is the substitution of a strict equivalent for the penalty due to sin and the Socinian rejection of all vicarious intervention. They agree that the atoning reparation satisfied not the rigorous exaction of Divine justice, but chiefly the just and compassionate will of God, emphasizing the love rather than the justice of God as honoured in the Atonement. The death of Christ is not the payment of a debt to a creditor, but a substitution counted sufficient by God the Father for a judicial penalty. Grotius emphasized the relation of God to man as a Ruler, and carried out the Arminian conception of 'the wrath of God' as His goodness regulated by wisdom. He regarded the motive of the Divine government as the desire and provision for the happi-

* *Amer. Meth. Qtly. Rev.* (1867) 346.

ness of the goveroed. In this rectoral relation the ruler has a right to remit a penalty, provided the end for which the penalty was appointed is otherwise attained. This end is the preservation of order and the prevention of future transgressions. The death of Christ as a 'pensl example' secures this end, showing impressively what sin deserves and what the penalty would be were it actually inflicted on the transgressor. It is a manifestation of the Lawgiver's hatred of sin. It is not actual punishment, but rather the symbol of it. As it is not the literal pensalty, God may freely determine what other conditions for bestowing pardon are suitable. In the light of the Calvinistic view of the absolute sovereignty, this rectoral theory was a surrender of the theory of satisfaction. But the Arminianism of Arminius laid much stress on the inflexibility of God's righteousness, which consists, according to Episcopius, in maintaining His truthfulness in attaching a penalty to His commandments. Episcopius himself, however, still held to a modified Anselmic position by regarding the sacrifice of Christ as a price; because God is willing so to regard it. Limborch is a closer representative of Arminianism. He asserted that Christ suffered as a Divinely appointed sacrifice, and reconciled God to man as if the sinner had suffered himself. Arminianism generally renounces the commutative theory of exact and mutual compensation, since some perish for whom Christ died.*

(3) *Depravity.*—The Calvinist held this to be total, involving bondage of the will and inability to any spiritual good. By the Fall the nature of man was poisoned at its inmost core, and original holiness and righteousness changed into absolute depravity. No distinction was made between imputed guilt and inherent depravity. Arminianism held that depravity was a bias, which left the will free and man responsible for his own destiny through the choice of faith or unbelief. The Adamic unity of the race was preserved, but its inherited tendencies to evil were met and neutralized by the free and universal grace communicated to the race in Christ—the second Adam. Absolute reprobation cannot therefore be based upon the doctrine of original sin. Arminianism denied that the sin of Adam is imputed to his posterity in the sense of their being guilty of, and chargeable with, the sin Adam had committed. A clear distinction is made between actual and original sin. The free gift of grace to the whole race in Christ is the foundation of the entire Arminian system. Its great contribution to the discussion of sin was the decisive assertion of the doctrine of prevenient grace, due to the universal diffusion of the influences of the Holy Spirit, and consequently the acceptance in every age of those who strove after natural uprightness. Grace, therefore, though not the solitary, is yet the primary cause of salvation. To this primary cause is due the co-operation of freewill; for upon its stimulus by grace prevenient depends the co-operation of the will with grace efficient.

Later Arminianism declined in some degree from this position. Less exalted views of the original state of man were current. To preserve intact the original freedom of the will, the conception of a primitive state of perfect holiness was discounted. A state of primitive innocence must have been allied with primitive ignorance. It was also doubted whether immortality originally belonged to the nature of man. With milder views of original sin greater stress was laid on the physical impurity of human nature; it was also denied that its corruption had in it the true characteristics of sin. The inclinations to evil inherited from Adam are not in themselves blameworthy; they are only different in degree from the same appetites in Adam. It is only consent to them that becomes real guilt. The 'innate liberty of the human will' was regarded as able to co-operate of itself with the Divine law. The Arminianism of Methodism reverted to the earlier position, holding that whatever power there is in the human will—in its ability or its choice—is the issue of redemption. No ability remains in man to return to God. The co-operation of grace is of grace. The Augustinian idea of 'common grace' is rejected in favour of the co-ordinating of the universality of grace with the universality of redemption. No man is found in a state of mere nature; nor, unless he has finally quenched the Spirit, is he wholly devoid of the grace of God. The virtues of unregenerate man are not *splendida vitia*, but works of the Spirit. Such virtues are a universal experience of the race. If Adam brought a universal condemnation and seed of death upon all infants, so Christ brings upon all a general justification and a universal seed of life.

(4) *Conversion.*—Both Calvinist and Arminian regard this as the work of the Holy Spirit. But Calvinism maintained the grace of God to be irresistible. The calling of God was both effectual and efficacious, and due to the immediate operation of the Spirit of God upon the soul. The Arminian asserted that the Divine action was mediate, through the truth, and thus moral and persuasive, as distinguished from physical and necessitating. Moreover, the grace which is effective to the processes of repentance and renewal may be finally resisted. The firm maintenance of universal redemption by Arminianism naturally affected its theory of justification at many points. Whilst holding, in common with the Reformed standards generally, that Christ's obedience is the only meritorious cause of justification, and faith its sole instrumental cause, and that good works have no kind of merit, Arminianism did not distinguish between the active and passive obedience of Christ. Gradually also it denied the direct imputation of Christ's righteousness. Faith came to be regarded as justifying, not as an instrument uniting the soul to Christ, but as an imperfect righteousness, which is mercifully accepted by God as if it were perfect. Whilst repudiating the view that works merit salvation, the Arminians asserted that the faith which justifies is regarded by God as a faith which includes obedience. This is the position both of Arminius himself and of his followers. It is allied with a tendency, distinctly marked, to define faith in terms of intellectual assent rather than as trust. It became a simple reception of the doctrines and laws of revealed religion. The influence of grace was by no means merely of a moral nature. It wrought in and accompanied the word of God. Its influence therefore, whilst supernatural in its character, was in its mode of operation analogous to the natural power of all truth. This tendency to invest faith with merit as a means of justification was suspected of approaching ultimately the Roman doctrine of merit by works on the one side, and of favouring the antinomian tendencies which had been condemned as inherent in Calvinism, on the other. A fair criticism of its attitude applied to it the term *Neonomianism*, because of its supposed introduction of a new law—the law of grace—according to which the legal righteousness for ever impossible to man finds a human substitute in an evangelical righteousness accepted of God, though imperfect, for Christ's sake. The title detected the perilous tendency, which the later history of Arminianism did not escape, of the notion that Christ has lowered the demands and standard of the moral law.

Methodist Arminianism met these tendencies in two ways:—(1) It declared that, though God requires faith, it is also His gift. He does in Christ pardon the imperfection of the good work wrought by faith, but He does not repute it as perfect so far as concerns our justification. This would be the imputation of righteousness to the believer himself. It is the faith of the ungodly which is reckoned for righteousness, even before it can produce its first act towards good works. (2) There was the definite insistence in Methodist theology upon the necessity as well as the possibility of entire sanctification. This teaching formulates and urges the demand that faith must be justified by works. It protests against the distinct imputation of the active obedience to man, whilst it clings to the imputation of Christ's righteousness generally. The Methodist teaching on entire sanctification was quite in harmony with the main contentions for which Arminianism stands, and ought to be regarded as a supplement to the views of the early Arminians, who wrote much on the question of Christian perfection. They left its principles and processes, however, largely indefinite. Compelled by their theological convictions, they maintained that such holiness as God reputes perfect may be attained in this life. If grace is free, it will be full. They distinguished between a first perfection of the beginning of Christianity, a second of the unimpeded progress of regeneration, and a third of established maturity of grace. Of the means, assurance, and limitations of the last stage they made no positive declarstion. Perfection is proportionate and progressive. It is not sinlessness, but the 'expulsive power of a new affection,' excluding the habit of sin. Arminianism exhibits its doctrine more in opposition to the Roman works of supererogation or Calvinistic antinomianism than in its profound relation to sin and

* Pope, *Comp. Christ. Theol.* ii. 312.

love, and to evangelical perfection. Arminius writes: 'While I never asserted that a believer could perfectly keep the precepts of Christ in this life, I never denied it; but always left it as a matter to be decided' (*Works*, i. 608). The vital question of the abolition of sin was never, either by Arminius or his successors, decided upon. His protest against ultra-Calvinism was taken up by the German Pietists, and, in purer form, by the English Platonists, who prepared the way for the Methodist modification of doctrine on this subject, which was both mystical and ethical. Its chief contribution was the emphasis laid upon entire sanctification of the believer, as a provision of the covenant of grace, directly administered by the Holy Spirit, in response to faith—a faith working by love, and retained by constant union through faith with the living Christ (see METHODISM).

(5) *Final Perseverance.*—The Calvinist held the indefectibility of the saints. Men unconditionally elected, absolutely purchased by the death of Christ, and irresistibly called out of their depraved and lost estate by the direct operation of the Holy Spirit, could not possibly fall from grace. The Arminian criticism hesitated at first to meet this position by a direct negative. But such a position was speedily seen to be inevitable. And, as a result of its other doctrinal positions, the possibility of a true believer falling from grace was declared. This found warrant also and verification in examples and personal experiences that could not easily be mistaken. Moreover, as the Arminian method revealed a growing distrust of the authority of the Symbolical documents, it was easy to assert that the Calvinistic position professed not so much to be based upon direct Scripture support as to rest upon the necessary principles of the so-called Covenant of Redemption. The provisions of this imaginary covenant between the Father and the Son, before time began, in respect of the certain number to be redeemed and given to the Redeemer, as the reward of His atoning submission, had produced the idea of a fixed and unalterable division of mankind. To this canon every Scripture must be made to conform. It was easily shown that no Scripture evidence of such an unconditional covenant existed. It was less difficult still to urge against it the criticism that its ethical issues provided reasons against its provisions.

Theologically, Arminianism is a mediating system throughout. Its most characteristic feature is conditionalism. Absolutism is its persistent opposite; moderation, the mark of its method. The failure to appreciate this position accounts for the frequent and grave misunderstanding of Arminianism, and for the natural ease with which its delicately balanced judgment has declined, in the hands of some of its exponents, towards theological positions with which it had no true affinity. These have been chiefly Socinianism and Pelagianism — systems due to an over-emphasis upon the human. Much that in certain periods passed for Arminianism was really a modification of one or other of these systems, which a true Arminianism justly repudiates. In Holland, Arminianism, gliding by almost imperceptible degrees, ultimately reached a position with little to distinguish it from Socinianism. In England, where there was a presage of Arminian thought long before the time of Arminius and his system, its principles found an interesting development, and their profession an unusual environment. The influence was seen in the ambiguity or comprehensiveness of the Articles of the English Church. Latimer and Hooper, Andrewes and Hooker might with propriety have been called Arminians, if Arminianism as a system had been in vogue when they wrote. Arminian teaching by Baro, Professor of Divinity at Cambridge, gave rise to the Lambeth Articles also. But Arminianism became a political question, with the singular result that, through the influence of Laud and Juxon, it became allied with the side of the King, whilst it was the Calvinists, with the distinguished exception of John Goodwin, one of the ablest defenders of Arminianism, who stood by the Parliament. But the Arminianism of Laud was not the Dutch Arminianism. Arminius would have denounced its sacramentarianism as superstition. With the issues of the Civil War, Arminianism suffered eclipse, but it returned with prelacy at the Restoration; and for more than half a century its influence was supreme in the Anglican Church. But the later divines of this school depreciated the doctrines of grace, dwelling more upon the example of Christ than upon His atoning work, and the Arminian principle persisted mainly as a negation of Calvinism. Cudworth, Jeremy Taylor, Tillotson, Chillingworth, Stillingfleet, Burnet, Pearson, Whitby, and others, down to Copleston and Whately, were Arminian theologians of eminence in the Church of England. The positive temper of Arminianism, however, suffered under their treatment of the system. Its fine balance between Calvinism and Pelagianism was lost. It was blended with tendencies to Latitudinarianism and Rationalism; and became a negative rather than a constructive or mediating system. It was from this setting, however, of Arminianism in its non-juror environment and atmosphere, that the restored Arminianism of Arminius, with its emphasis on the grace of God, emerged into strength in England in the Evangelical Revival of the 18th century. The Wesleys came of a sturdy Arminian stock of this type. And probably the ablest expositions in English of the Arminian system are to be found in the writings of John Wesley, John Fletcher, Richard Watson, and William Burt Pope, the Wesleyan theologians. Methodists throughout the world, with the exception of the Calvinistic Methodists in Wales, who represent the Calvinistic attitude of Whitefield, who withdrew from co-operation with the Wesleys on this ground, are convinced Arminians, who profess to adhere to the original Arminianism of Arminius and his followers of the earlier type before it approximated to the rationalistic temper of Socinians or Latitudinarians, or was merged in the prevailing tendencies of Restoration theology or American Unitarianism. The Wesleyan type of Arminianism, with its Evangelical note, is at present the most influential. It has spread widely throughout the British Empire and America, and is based upon the conviction that the Calvinistic positions are incompatible with Divine equity and human freedom, whilst its loyalty to the doctrines of grace is the best vindication of Arminianism from the common charge of Pelagianism and Socinianism. Lacking the doctrinal loyalty and the Evangelical vitality of the Arminianism of Methodism, Dutch Arminianism is a dwindling force. The inclination towards freedom of speculation, the rejection of all creeds and confessions, a preference of moral to doctrinal teaching, Arian views respecting the Trinity, the virtual rejection of the doctrines of Original Sin and imputed righteousness, and the depreciation of the spiritual value of the Sacraments, have resulted in the gradual reduction of Arminianism in Holland to a negligible theological quantity, and to the dimensions of an insignificant sect, numbering only some twenty congregations.

4. Underlying principles.—The supreme principle of Arminianism is conditionalism. It provides a philosophical *via media* between Naturalism and Fatalism. As an active criticism of Calvinism it is based upon two positions—the restless and dominant demand for equity in the Divine procedure, on the one hand, and such a reference to the constitution of man's

nature as will harmonize with the obvious facts of his history and experience, on the other. It sought to construct a system which should be dominantly ethical and human throughout. It contended, therefore, that moral principles and laws consistently condition the manward activities of the Divine will, and set human limits to the Divine action. The Calvinistic conception of justice was based altogether on the supremacy or rights of God; Arminianism so construed justice as to place over against these the rights of man. Sin, it declared, had not so transformed human nature that man had become a mere vessel of wrath or of mercy, a creature who was reprobate because of guilt he had inherited, or saved by a grace which operated without rational distinctions and without regard to foreseen faith or good works. In equity the worst criminal had his rights. A fair trial before a fair tribunal was one which sin did not invalidate. The consideration of these rights did not cease because the judge was God, and the accused, or even the condemned, was man. The Creator owed something to the creature He had fashioned, because of the manner of His fashioning; and these obligations did not cease because the first man had sinned. In a perfectly real sense sin had only increased the obligation of God to be just. If original sin was what Augustine had stated it to be, and what Calvinism had maintained it was, then it would be truer to the facts it involved to speak of it as a radical wrong from which man unjustly suffered. The race had not been consulted by the first man; in no true sense was he the representative of the individual members of the race; for they had no voice in his appointment, and no veto upon his acts. By every law of justice, therefore, they were to be regarded as objects of commiseration rather than persons to be blamed for what they had suffered, since they suffered as the consequence of the first man's sin, altogether apart from their own voluntary acts of kindred disobedience. And although Arminianism retained the federal principle, and held that the federal relationship had resulted in a weakened will for the individual, and had afflicted him with a bias towards evil, it urged that it was difficult to conceive anything more nearly approaching infinite injustice than allowing such a relation, of itself, to involve millions of men of every age and in every age in eternal death. If all had sinned, all had an equal right to be considered in the provision and administration of any redemptive processes that might be operative. The introduction into these relations of the Arminian principles resulted in a criticism that seemed irresistible; for the moment the idea of equity was admitted to a place in the consideration of the relations of man and God, the old absolute unconditionalism became untenable. If justice reigned, and its principles were common to God and man, it meant that God must he just to man, even though man was disobedient to God; and justice could not tolerate the condemnation of man for a sin which was committed without his personal knowledge or responsibility, any more than it could approve of a salvation which had no regard for the personal will or choice of its recipient.

Arminianism was always most successful when its argument proceeded upon principles supplied by the moral consciousness of man. This recognition of the value of the testimony and of the entire contents of human consciousness was the correlate in Arminianism to the idea of equity; its exposition of the idea of man provided the second of its two main principles. It regarded man as free and rational; sin had not destroyed either his reason or his freedom. By the one he had the ability to believe, by the other the ability to choose. Even if the racial connexion had weakened or perverted these faculties in the individual, the result was not incapacity to act, because the racial connexion with the second Head was intact and operative in the communication of the energy of prevenient grace. In justice, therefore, God must deal with man as possessed of such abilities. On their co-operation with the Divine activity the results in salvation or reprobation depended. Thus the free will of man was regarded as conditioning the absolute will of God. In the realm of nature His physical attributes ruled; His omnipotence was unconditioned. In the realm of mind and will His love and moral attributes governed, and their rule was conditioned. Man was not a part of physical nature merely, or a mechanism involved in the impersonal or unmotived motion of non-moral creatures. His destiny could not therefore be deduced by logical processes from the premise that God is the Sovereign Will, which can do as it chooses; for He has chosen to create man free and responsible; and His attitude and conduct towards man will consequently be conditioned by the nature He has made. If it has been His good pleasure to create man moral, it will not be His will to deal with him as if he were merely physical. If Creator and creature are alike moral in character, it follows that necessitating action on the one side, and necessitated action on the other, are both excluded. By His own voluntary act God has limited the range and exercise of His physical attributes, and so the terms which express His relations to man must be those of reason and freedom, not those of will and necessity. Arminianism offers no disparagement to grace in general, and deepens the emphasis on prevenient grace in particular. But whilst the peculiarity of Calvinism is found in holding fast to the absolute idea of God in opposition to all 'idolatry of the creature,' the centre of gravity of the Arminian system is found in the sphere of anthropology. Its doctrine of man probably differentiates it more definitely from Calvinism than its doctrine of God.*

5. **Theological and philosophical influences.**—The twofold emphasis of Arminianism on the ethical and human elements in its system declares the sphere and defines the source of the modifying influences it exerted on subsequent theological and philosophical thought. These influences were essentially mediating; and they were mostly indirect. They reached the sphere of philosophical speculation chiefly through theology. But the leading principles of Arminianism were potential in both spheres, in the succeeding periods of intellectual revival. It is well to keep in mind the fact that, in the history of European thought, the 16th cent. was great in theology rather than in philosophy, and that the 17th was great in philosophy rather than in theology. But without the religious thought of the earlier century, the later would have been without its problems, and therefore without its thinkers. The pre-eminence of the one in religion involved the pre-eminence of the other in philosophy. In this influence of theology upon philosophy, and, later still, upon more distinctly ethical thinking, Arminianism had a considerable share. Although questions directly upon ultimate philosophical principles were, on the whole, not in the spirit and thought of the age of Arminianism, yet Arminianism, as more generally true to the whole of the facts of existing problems, was distinctly more open to the access and authority of the modern spirit than Calvinism. By its underlying principles of equity and freedom it was more perfectly fitted than its rival system for a period of intellectual transition. It became the form of Re-

* Fairbairn, *Christ in Mod. Theol.* p. 170.

formation theology which most easily allied itself with the advance of knowledge and with the humanism of the new learning. The Cartesian philosophy, which was bringing about a gradual transformation of theological views, especially in the Netherlands, where already a liberal spirit was showing itself in general uneasiness under the yoke of the Symbolical documents, found especial favour with the Arminians. They had also within their ranks many eminent men, who were progressive thinkers and leaders of thought outside a distinctly theological circle, who exerted a beneficial reaction upon Protestant theology by their thorough scientific attainments and the mildness and toleration of their views. Arminianism stood generally for the strengthening of the scientific temper and for the principle of moderation, which represented dawning methods of far-reaching importance in the intellectual life of the modern nations. On the other hand, this attitude favoured the growing tendency towards Rationalism and Latitudinarianism into which Arminian theology frequently drifted. But that this drift represented any necessary effect of the Arminian movement is disproved by the fact that it was the Arminian system of thought which lay at the theological sources of the great Methodist revival in the United Kingdom and America during the 18th cent., whose leaders re-stated Arminianism in modern theology in its purest form, and vitalized it with the warmth of religious emotion and the joyous assurance of the Evangelical spirit. Arminianism in the glow of the spiritual enthusiasm of the early Methodist evangelists has been truly described as 'Arminianism on fire.'

The Arminians were the fathers of toleration. Amongst its earliest representatives are found stalwart advocates of religious freedom, who were willing to suffer for their views. Within the sphere of opinion Calvinism did not spontaneously incline to toleration; it was inflexibly dogmatic; its instincts and ideals were aristocratic rather than democratic in relation to ethical authority. It is curious to note, however, in spheres more purely political, that an interesting reversal of the natural order of the two systems occurs. As in England the Landians were Arminian, and the Parliamentarians Calvinistic, so in France the Jansenists were Calvinistic, and the Jesuits Arminian. The natural tendencies of Arminianism to toleration may be instructively traced in the Latitudinarian teaching of the Cambridge Platonists, who were greatly influenced by the writings of Arminian scholars, particularly by those of Episcopius. They pleaded for liberty of conscience, and studied to assert and examine the principles of religion and morality in a philosophical method; they declaimed equally against superstition on the one hand and enthusiasm on the other. Moderation was the first law. They were conspicuous for their advocacy of freedom of inquiry, their toleration of diversities of opinion in non-essentials, their genial temper in controversy, their effort to bring about a reconciliation between theology and philosophy, their recognition of religion as less a doctrine or a ritual than an inward life, and their strong purpose to establish a rational theology, which should avail as a reply to the atheistic polemic. Arminianism, however, made common cause with all religious parties in resisting the dogmatism of the philosophy of common sense, which was declaring open war against the belief in the positive authority of Revelation. And the association of Arminianism with Deism and Naturalism, because of a supposed common fundamental ground in the appeal to reason, may be regarded as an unwarranted exaggeration of the Arminian emphasis on the human. Arminianism could be under no necessity to deny or depreciate the supernatural. By the time the age of speculative criticism and of the antagonism between faith and knowledge was reached, Arminianism as a distinctive doctrinal position had been established and its peculiar contribution made to Systematic Theology. Its influence on such later controversies is only indirect. That the influence was real cannot well be doubted, because of the emphasis on moderation and the more genuine welcome afforded to the products of modern speculation by Arminianism. Whether its influence, through its demand for the recognition of the authority of reason in the theological sphere, affected the philosophical thinking which resulted in the rationalism of Kant, or in its reaction in the subjective theories of Herder, or in the theology of Jacobi or Schleiermacher, it is difficult to say. Certainly Kant's doctrine of the Practical Reason, with its claim for the recognition of the ethical constitution of human nature, was developed in obvious harmony with the Arminian emphasis upon the authority of the moral consciousness as a factor in the interpretation of the relation of God to man. Schleiermacher's doctrine of absolute dependence had definite relation to Calvinism. Only in the place he gives to religious feeling is affinity with the Arminian principles likely to show itself.

With the distinct problems of modern speculative thought—'creation,' 'immanence,' 'mind and matter'—Arminianism, like the other Protestant theologies, had comparatively little concern. The theistic position of the creative act, with its implications, was generally accepted; there was no sufficient evidence, from the scientific study of nature, to suggest irreconcilable differences from the traditional view. In one point, however, Arminianism was peculiar. It laid special stress on creation being the work of the Father as distinct from the equal creative activity of the three Persons in the Trinity. The movement of Arminian thought was set in a framework of political, social, and economic changes which cannot be dissociated from its influences without missing their complete significance; but these are obviously beyond the scope of this article. One fact of importance ought, however, to be noticed. When the problems of 'natural rights' and the distinction between *jus naturale* and *jus gentium*, which had been raised by the philosophers and jurists of antiquity, passed, as a result of the Renaissance, from the region of academic speculation into that of practical politics, the transition was accomplished through an Arminian channel. Grotius was the first to start the question of the distinction between natural and conventional rights, and was thus the father of the modern exponents of the 'Philosophy of Law.' How profound was the influence of this transition upon the course and character of modern systems of Ethics will be obvious. It is here that we come into the presence of one of the less appreciated, but influential services rendered by the Arminian definition and advocacy of its fundamental principles—equity and human freedom. These principles represent the prevailing tendency of the leading ethical theories of the present. Without them the advance beyond the ethics of Scholasticism would have been impossible. Calvinism missed them, and, in doing so, missed the opportunity and the possibility of becoming the basis of an intellectual statement of ethical obligation satisfactory to the modern mind. Although the Calvinistic conception of the Church, as being based upon the individual rather than upon the institutional principle, was essentially different from that of Rome, the Calvinistic ethics is, nevertheless, based upon outward authority—

the authority of a truly organized Church and of the Scriptures truly interpreted by such a Church. This position was not accidental; it was of set purpose. Calvin deliberately subordinated ethics to dogmatics. From the Protestant point of view this was fundamentally reactionary; it was Scholastic in method and aim. The true ethics, and the only ethics consistent with the essential Protestant principle, must be based upon the inward compulsion of conscience, not upon any external authority. External authority could result only in casuistry. This was the Roman method and practice. The ethics of Thomas Aquinas and of Ignatius Loyola expounds a closed system given in the teachings of the Church; the ethics of Calvinism expounds a closed system given in the written Word. 'For true ethical development there is no more room in logical Calvinism than in logical Romanism.'* Ethically, Calvinism and Jesuitism have a common foundation in that they depend upon external standards and sanctions. On this account Calvinism has not, as a matter of history, contributed to the development of ethical theory in any degree commensurate with its magnitude as a religious force. It is beyond question that, as an inspiration to high ethical endeavour, Calvinism has produced types of sacrificial devotion to right conduct which have frequently touched a lofty heroism in the lives both of individuals and of communities in which its doctrinal system has been dominant. Yet it must be acknowledged that the influence of Calvinism, as a system, in the philosophical re-construction of modern ethics has been reactionary. The expansion, on the other hand, of the fundamental principles of Arminianism has wrought harmoniously with the processes of ethical development, which are based upon the manifold ideals and constraints of the moral consciousness of the individual. It was the plaint of the aggrieved moral nature, quite as much as the philosophic intellect, that was articulate in the Arminian protest. The deterministic depreciation of the rights of human nature to the value of a mechanical movement in the presence of the Divine will was the ethical weakness of Calvinism in which Arminianism found its advantage. This stress on the place and functions of human nature in the interpretation of, and co-operation with, the Divine mind was the distinction consistently maintained between the rival systems.

Arminianism was the medium by which the humanistic spirit of the Renaissance was translated into the theological and exegetical sphere. Its great men — Grotius, Episcopius, Limborch, Brandt, Le Clerc—are all men of literary faculty and humanistic temper. In Calvinism the spirit is more distinctly speculative and scholastic, and the intellect deductive and constructive. Its great men—Calvin, Zanchius, Gomarus, Twisse, Rutherford—are all men of speculative genius. It thus easily happened that the tendencies of Arminianism were often—and sometimes rightly—suspected of affinity with Pelagian and Socinian views. These affinities were strengthened by the mingling with the Arminians of Socinian scholars returning from exile; and in many cases Arminianism merged its identity in these phases of thought. It is well known that the exaggeration of Subordinationism by the Remonstrant divines, especially by those of the later age of Arminianism, glided by subtle degrees into the Socinian position. They denied the aseity of the Son, which Calvin had taught. His subordination to the Father, as the Spirit is subordinated both to the Son and the Father, was urged. It was held that, though the Divine nature belongs to the Son and the Spirit, the Father is first in dignity and power. Arminian leaders also favoured the Nestorian conception of the Person of Christ. The agency of the Logos was regarded as a 'special influx' or 'operation' of the Divine nature. It is an assistance of God, involving a communication of Divine powers so far as a creature can receive them. Much more recently the influential Unitarianism of America has succeeded the lingering Arminianism of the New England States, as a one-sided development of prevailing ethical principles respecting the responsibility of man and the enthusiasm for his prerogatives.

Arminianism arose historically in the great age of Protestant Symbolism, which succeeded the period of the earlier expositions of the Reformation theologians, who had based their authority more simply upon the appeal to spiritual experience and its warrant and confirmation in the Scriptures. It was the age of Protestant dogmatics, of which the characteristic was the substitution of creeds and the compulsion of confessions in place of the personal contact of the individual mind with the immediate sources of truth accessible in the writings of inspiration. Arminianism strove to emancipate exegesis from the thraldom of dogmatics. It resisted the tendency to erect everywhere a formulated creed into the position of a supreme arbiter of truth. The formal principle of authority was denied the first place. Ecclesiastical theology had tended to become dominant over Biblical. The Bible was looked upon as an authoritative text-book from which doctrines and proofs of doctrine were to be drawn with little or no discrimination as to the use to be made of the different sacred books. The Word of God and the Bible were identical. No critical distinctions were tolerated. Divines had not to reason their systems, but to unfold them from certain fixed and unquestioned postulates. In the Reformed Church predestination was accepted as the initial principle for the systematic exposition of the Christian religion. Dissent upon any point was treated as heresy. There was no antagonism in Arminianism to the formal principle of Protestantism—the immediate relation of the religious consciousness to Christ—or to the ultimate authority of Scripture. What Arminianism suspected and resisted was the prevailing tendency, which was far from the intention of the original authors of the Symbols, to assign to the Symbolical books of the Protestant Churches the same authority over faith which had been ascribed to tradition in the Roman Church. The Arminians sought to preserve a moderate and less dogmatic orthodoxy, and to introduce generally milder features into the prevailing hard cast of doctrinal systems. At the same time Arminianism, although apparently less intensely antagonistic than Calvinism to Rome, because of the emphasis it laid upon the value of the human in religion, was more truly Protestant in rejecting the Roman principle of the authority of tradition in its Protestant guise of authoritative Symbols. For similar reasons Arminianism was a protest against the mystical principle of interpretation which insisted upon the supremacy of the internal word as a sufficient exponent and infallible judge of the external. Constantly discounting dogma and mysticism alike, the Arminian divines appealed to the analogy of faith, to experience, to reason, to the aid of the Holy Spirit, as essential elements in the interpretation of Scripture. Authority was composite, and involved the whole contents of consciousness. A statement is not true because it is found in the Bible, but it is found in the Bible because it is true of itself. This position—that the Scriptures contain the truth, but are not of themselves the truth—gave considerable impulse to the

* *Hibbert Journ.*, Oct. 1907, p. 180.

speculative treatment of theology, and, through the writings of Grotius and Episcopius, issued in methods of theological discussion which gradually extended to the whole Evangelical Church.

The Arminian effort to meet 'the idolatry of Scripture' by the exaltation of the authority of the moral consciousness occasioned the charge against Arminians of laxity in views of inspiration. Their position was confused with the Socinian method of subordinating the authority of Scripture to that of reason, and of making its interpretation depend upon the so-called truths of reason. Here again, however, pure Arminianism is the mediating position. Whilst disagreeing with Luther's position that reason is blind in spiritual things, it resisted the Socinian extreme, as it resisted the rigid and narrow adherence to the letter of Scripture which marked later Protestant theologies. Some of the later Arminians added the canon that Scripture cannot contradict reason. The general position, however, was that reason must be followed in interpretation; that the foundation of religion, on its intellectual side, should be in personal thought and investigation; that neither antiquity nor universality was a proper or sufficient ground of belief; and that every passage of Scripture must be considered separately and in its historical setting and limits. This appeal of Arminianism from the Symbolic methods to the critical treatment of the text and substance of Scripture was a precursor of the methods of careful exegetical study now current, and of their issue in the restoration to authority of Biblical as distinguished from Systematic and Dogmatic Theology.

The reaction from the hardening processes of the Lutheran and Calvinistic divines upon the views, generous for their time, of Luther and Calvin, respecting the human and fallible element in Scripture, which were illustrated in the terms of the Helvetic Formularies and in the Buxtorfs' irrational contention for the inspiration of the Hebrew vowel-points, was inevitable. It was initiated by the Arminian writers, who reserved the direct action of the Holy Spirit for matters of faith, and left historical research and the memory of human writers to their fallible functions. Arminianism thus asserted positions in Biblical interpretation which have proved a basis and authority for the methods now known as the Higher Criticism. Sanctions were also provided for the science and practice of Textual Criticism through the access afforded by Arminian principles to an atmosphere of freer inquiry into the preservation and historical growth of the received texts of the OT and NT.

The Arminian principles of human freedom and personal responsibility, with the humanitarian spirit they tended to evoke, gave a new impulse to the awakening movement towards Foreign Missions, which succeeded the era of rationalistic influence in the Protestant Churches. If the Atonement was universal, and the salvation of the whole race possible, then the sense of responsibility for making known the conditions of salvation to the race was deepened, and a note of urgency was added to the claim for the expansion of Christianity. Moreover, the weak place in the great Protestant confessions had been the anthropological. One of the many effects of this deficiency was seen in the judgment of the Church in respect to the heathen races, which was obviously prejudicial to aggressive enterprise. Calvinistic thought had strengthened this judgment. The application of Arminian principles was amongst the earlier signs of the dawn of the new light upon the nature and history of the races of mankind, and upon their religious possibilities, which has since broken in the ethnic results of the kindred sciences of Anthropology and Comparative Religion. And the system, amongst the Protestant theologies, least discredited by the new light, is Arminianism.

Reference must be made finally to a great service Arminianism has rendered to theological thought generally. This is discovered in the subtle influence it has exerted in the gradual softening and humanizing of the harsher forms of theological definition. As a separate and separable system, either ecclesiastically or theologically, its reign was brief; as a genial and vitalizing influence, suffusing itself through all the discussions of the relation of God to man, its authority is ageless. It has wrought, often secretly and unacknowledged, towards the approximation of the position of modern theology respecting Predestination to that which was held by Catholic Christendom before the age and teaching of Augustine. Substantially the Churches of East and West were united, before his time, in holding the primitive and Scriptural view of the relations between God and man in the work of salvation, and of the sole responsibility of man for his own damnation, which it was the effort of Arminianism to restore. How far the disturbance of the thought of the Church on these relations, brought about by the revived and intensified Augustinianism of Calvin, has been redressed by the influence of Arminianism, is at present only partially discernible. It is, however, certain that it has greatly modified the specific views which were the objects of its original contention, as they are now held by Calvinistic theologians; it has also become a dominant factor in the current re-statement, to the present generation, of the doctrines of grace. The reduction of the area of Calvinistic influence, and its partial disintegration in communities where it had long been established, are facts that cannot fail to challenge attention. When Arminianism arose, very early in the 17th cent., the Calvinistic creed prevailed largely in Bohemia and Hungary; it was supreme in Switzerland, Holland, the Palatinate, and in the Protestant Churches of France, Scotland, and England, where, until the close of Elizabeth's reign, it was the prevalent theological influence; and shortly afterwards it grew to strength in the Puritan settlements of America. Over all these areas a steady disintegration of its force may be traced. Many factors have co-operated in this result. But of those which may be regarded as theological and ethical, the active principles upon which Arminianism insisted have been prime causes.

In France an early and interesting illustration of the modifying influence of Arminianism occurred in the theology of the school of Saumur, associated particularly with the name of Amyraut (see AMYRALDISM), and later with that of Pajon. Amyraut endeavoured to mitigate the harsh repugnance of the Calvinistic doctrine of election by his theory of hypothetic universal grace, which was substantially equivalent to a doctrine of universal atonement. God, in some proper sense, wills or desires that all men should repent and be saved. In case all should repent, no purpose of God would stand in the way of their salvation. But the indispensable means of repentance—regenerating grace, following election—is not bestowed upon them. In the order of nature the decree of election follows the decree providing the atonement. The main peculiarity of Pajon's attempt to blunt the edge of Calvinistic particularism was his conception of regenerating grace. The Spirit uses the truth of the Gospel as its instrument in effecting the antecedent intellectual change; but He also uses all the circumstances

and providential environment of the individual. To this aggregate of objective influence, which is not the same in different individuals, regeneration, where it takes place, is due. It is the act of God because the antecedent circumstances are the effect of God's ordering, and are adapted by Him to produce the result. Pajonism aroused wide-spread interest in the French Church.

In Germany the strength of Lutheran influence was already in sympathy with the Arminian movement. Its influence was also strong, though silent, in the bosom of the Reformed Church itself; and by the time of the Wolfian movement, the Reformed dogmatics were moving from the doctrine of the absolute decrees. Amongst the English-speaking peoples, in addition to the influences, already referred to, which strongly modified the theology of the great school of Anglican divines, the influence of Butler became a powerful ally of Arminianism. His doctrine of probation was not the Calvinistic doctrine of the probation of the race, but the Arminian insistence on the probation of the individual in his unshared and unshareable responsibility.

In the Methodist revival Arminianism became aggressive. Associated with the renewed vitalities of personal godliness, the Arminian theology, carried by singers and preachers, passed swiftly across the Atlantic, and accompanied the earliest settlers as they moved, from east to west, across the continent. In the newer British Colonies at the Antipodes a similar influence has wrought, until, at the present day, Arminianism, as understood and taught by Methodist preachers, dominates what is probably the largest Protestant Church in the world, reckoning some thirty millions of adherents. In America the matchless intellectual gifts of Jonathan Edwards were consecrated to the task of checking and devitalizing the forces of Arminian doctrine. But the ultimate results were disappointing to Calvinistic theologians. The New England theology, where it has not passed under Unitarian influences, has revealed a persistent modification of the Calvinistic position. The distinctively Calvinistic formularies of faith in Great Britain and America have undergone revision, mostly at those precise points which were the objective of the Arminian attack.

Modern theology in general has tended to forsake the harshness and absolutism of doctrinal statement, without surrendering the deeper significance of the ultimate supremacy of the Divine will. And this position was the original idea and ideal of Arminianism. There is a deep and almost universal dissatisfaction with the declaration and issues of a limited Atonement, which was a main element in the Arminian objection to Calvinism; and a strong conviction prevails that the salvation of the non-elect is an object of sincere desire to the mind of God. Yet it will be obvious that it is not the doctrine of Predestination *per se*, in which Calvinism has enclosed the realms of nature and providence in a network of teleology, that excites the strongest repugnance to the system against which Arminianism rose to protest.* For Determinism in philosophy and Selection in biological science are still acceptable and popular equivalents for Election in the realm of grace. Differentiation is a basal principle in each of these spheres; but differentiation involves inequality; and inequality involves preference; for it is admitted that the differences are original, so far as individuals are concerned. Biology posits differences in the single cell. Psychological ethics starts the career of individual character with differences *ab initio*. Popular inferences assume that the difference between Cain and Abel, or between Esau and Jacob, is an illustration of the same principle that differentiates the hawk from the dove or the hart from the swine. It is rather towards the Calvinistic eschatology that the antagonism is most keenly felt. The aspect of injustice and cruelty which this element in the Calvinistic system wore to the early Arminians, it wears to the modern mind. The humanity of God has become an element in the standard of judgment applied to the Divine activity. Fatherhood has dispossessed Sovereignty. Immanence has modified transcendence. When to such tendencies is added the momentum of the critical and exegetical methods which prevail in the modern interpretation of Scripture, to which Arminianism gave countenance and impetus at their origin, it may be possible to show some justification for the claim, made by the advocates of Arminian principles, that they possess the requisite possibilities of adaptation for the re-statement of the doctrines of grace demanded by the appeal to the conditions of modern thought. Moreover, the persistence and prevalence of Arminian principles presage a place of prominence for them among the contributory forces which appear to be making for an inter-confessional and international theology, based upon critical exegesis and upon a philosophy which includes the whole facts of human nature, whilst yielding reverent allegiance to the mystery and reality of the Divine Sovereignty.

THE religious art of savage and barbarian races constitutes a field of inquiry the limits of which are exceedingly difficult to trace with any accuracy. There seems to be no doubt that among some tribes religion dominates almost the whole of individual as well as of social life. The Pueblo Indians in Arizona and New Mexico may be quoted as an example of such thoroughly religious peoples. The better the customs of these Indians have become known, the more evident it has become that even the apparently most trivial actions are to them associated with religious feelings and ideas. From birth to death the Pueblo Indian is, passively or actively, partaking in an almost continuous act of religious worship. In the art production of such tribes the religious purposes are naturally apt to become almost exclusively predominant.

It is true that the Pueblo tribes appear to be quite exceptional in their inclination towards pious practices. But if the word 'religion' be taken in its widest sense, as including magical ideas and superstitious beliefs, there might easily be found many other tribes among whom religion exercises an all-predominating influence on art production. And the field of religious art becomes further widened if, as has been done by several authors, traditionalism is included under the head of religion. Among almost all uncivilized nations, everything that has been transmitted from ancestors to descendants is treated with a respect which closely resembles religious feeling. And in art, even if the products we meet with be of recent origin, the methods employed in production have almost everywhere been transmitted from earlier generations.

It is only natural, therefore, that several authors should have been led to consider all ethnic art as essentially religious. This opinion is represented by some of the most eminent German ethnologists. According to Dr. Gerland, the distinguished continuator of Waitz's *Anthropologie der Naturvölker*, dances, pantomimes, and dramas, however meaningless they may now appear, have always originally been connected with religious ceremonies. The articles of dress and ornament with which primitive man decorates his body are, by ethnologists of this school, interpreted by preference as magic signs or religious symbols. And in works of art, such as rock paintings and engravings, the sacred and serious meaning has been taken for granted.

Against this line of thought, however, a reaction has set in among other German ethnologists. In his remarkable essay on petroglyphs (*Ethnographische Parallelen*) Andree has branded as a learned bias the general tendency to look for some sacred meaning in all ancient drawings, many of which may have had their origin simply in the impulse of the idle hand to scratch lines and figures on inviting surfaces. Other ethnologists have pointed out how easily the simplest dances and songs are to be explained as outbursts of an emotional pressure, which in itself has nothing to do with religious feeling. And it has been urged that the religious sanction, which traditionalism confers upon all ancient customs, does not in itself give us any information as to the real origin of these customs.

However sound in its principle, the reaction against the religious interpretation may, nevertheless, easily lead to a too radical scepticism. The case of the carved ornaments of the Hervey Islanders is most instructive in this respect. Notwithstanding the deriding strictures originally passed, in the name of common sense, on the symbolic interpretations of Stolpe and Read, an unbiassed examination can lead only to the conclusion, that in these apparently meaningless figures we really meet with a symbolic art which is full of religious significance (Stolpe in *Trans. of the Rochdale Lit. and Scientif. Soc.* 1891).

By such examples it is proved beyond question how impossible it is to uphold any *a priori* assertions as to the religious or non-religious character of primitive works of art. In order to estimate with exactness the influence exercised by religion on the earlier stages of æsthetic development, it would be necessary to examine in detail and from a philosophical point of view the artistic productions of all tribes of mankind. Such an examination has as yet been undertaken with regard to only a few tribes: the Hervey Islanders, the inhabitants of the Torres Strait regions, the Dayaks of Borneo, the Pueblo Indians, and some others. In an article for an Encyclopædia, there could in no case be any question of endeavouring to supplement these gaps in our knowledge. The only thing therefore that can safely be done is to interpret, at the risk of incompleteness, such works and manifestations alone as display their religious character on the surface. And it will be necessary, in order to keep the survey within reasonable limits, to exclude all works the origin of which is to be found in an exclusively magical purpose. Thus the various kinds of dramatic rain-making rituals, and the magically-medical cures, although generally executed by the religious profession, will not be treated of in this connexion (see MAGIC).

1. **Dramatic art.**—The simplest of all forms of religious art, from a theoretical point of view, are those dances and songs which are resorted to in order to bring about exaltation. The ceremonies of the Muhammadan dancing and howl-

ing dervishes and of many other well-known sects, might be quoted in proof of the fact that, among civilized as well as among barbarous peoples, a highly strung emotional state, even if produced by purely physical agency, is considered as a religious feeling. And it is significant that the only form of artistic manifestation that has been observed among the lowest of all savages—the wood Veddahs of Ceylon—consists of an exalted dance, which has justly been compared with the antics of the Siberian shamans and with the performances of the howling dervishes. As to the exact purpose of this ceremony, travellers do not all agree. Some take it to be intended as a kind of propitiation, addressed to the divinity of the arrow—an arrow being always stuck in the earth in the centre of the dancers. According to others, the dance might be explained as a kind of thanksgiving; others again see in it a rite, aiming at the expulsion of demons. But however much these interpretations may differ, the religious character of the ceremony has been taken for granted by almost all the different authorities. And their descriptions of the 'arrow dance' coincide at all important points (P. and F. Sarasin, *Naturwiss. Forsch. auf Ceylon*, iii.; Emerson Tennent, *Ceylon*; Hoffmeister, *Travels*; Deschamps, *Au Pays des Veddas*; Schmidt, *Ceylon*).

The participants in the dance are all men. At the outset, they advance slowly around the arrow without touching each other. Every dancer turns round on one foot, whilst performing some spasmodic movements with the free leg. The arms describe circles in the air, and the head is thrown backwards and forwards, to make the long, entangled hair stand out like a brush from the crown. The music is a simple melody, which is sung, or rather howled out, by the dancers. The time is marked by strokes of the hand on the nude belly. All this is begun in relative tranquillity. But gradually the time grows quicker, the movements become more violent, and the howling louder. Thus the dancers work themselves up to the utmost frenzy, and finally, one after another, fall to the ground in exhaustion. Some of them lie on their backs 'as stiff as a fallen tree,' whilst others, continuing the howling, tremble in convulsive vibrations.

This 'arrow-dance' is typical of a large class of dance-performances, examples of which are met with amongst most of the lower races, sometimes as mere amusements, but more often as religious rites. The means employed in order to bring about the exaltation and the convulsions may, indeed, be more complicated than those resorted to by the Veddahs. Thus, among some North American Indian tribes (cf. Schoolcraft, *Indian Tribes*, v.) the dancers prepare themselves for their performance by some days of fasting, and increase their state of exaltation during the dance by partaking of drugs or inhaling poisonous smoke. The clappings on the nude belly are, at higher stages of culture, replaced by the sound of some instruments capable of a greater suggestive power. But the spirit of the performance is none the less the same all over the world. Whether the dancers belong to the Ainus, to some of the aboriginal tribes of India (Aquis, Kurs, Santals), or to some South- or West-African race (Basutos, Tshi-speaking peoples on the Gold Coast), their chief endeavour is always to throw themselves, by violent movements and sounds, into a state of exaltation, which borders upon, or really passes over into, insensibility and unconsciousness; and it is the same endeavour which characterizes the celebrated shamanistic performances of the tribes of Northern Asia (cf. *e.g.* Radloff, *Sibirien*; Mikhailovski in *Journ. Anth. Inst.* xxiv. 62, 126).

In the shamanistic rites, however, we meet with one important feature that is not represented in the Veddah dance. In this example, the frantic scenes seem to be over at the moment unconsciousness is attained. In the higher developments of the arrow-dance type, however, it is from this moment that the real performance begins. And what follows, far more than the dance itself, is apt to give a religious character to the rite.

It is well known that on the lower stages of culture lunatics are generally considered as possessed by some divinity, and are consistently treated with a kind of religious respect. It is only natural that the same attitude should be upheld in those cases where the mental disorder is acute instead of chronic. And the shamanistic psychosis is the more liable to be interpreted in a supernatural way, since the shamans, in accordance with the traditionally-fixed programme of their performances, invariably astonish the bystanders by jugglery and feats of insensibility, such as eating fire, lacerating themselves with knives and needles, etc., made possible by their exalted and anæsthetic state (see SHAMANISM). The sudden change in the voice and behaviour of the convulsive dancer, together with the apparently supernatural power he exhibits, must necessarily lead the primitive spectators to the inference that a divine personality has taken hold of the shaman, while he himself is endeavouring by all means in his power to confirm the spectators in this belief. He delivers oracular utterances in a mystic voice, which is taken to be the voice of the god, or he keeps up long dialogues with the divinity, who is supposed to be visible to him, but is audible only to the bystanders. We have not in this connexion to decide whether these representations are wholly fraudulent, or whether they may have their origin in some visual and auditory hallucinations of the shamans. The important fact, from our point of view, is that in either case the orgiastic and, so to say, lyrical dance, which forms the beginning of the shaman performance, has passed over into something which, in its effect, if not in its intention, is to be considered as a work of dramatic art.

2. **Pictorial art.**—In these dramatic representations we meet with an expression of the belief—which may partially have been prompted by the facts of shamanistic possession—that the priests are, or may for a time become, inhabited by the divinity. If, as primitive peoples seem to believe all over the world, the priest really is a kind of 'god-box' (to use the picturesque expression of the Polynesians), then it is evident that the actions he is representing must impress his pious spectators as an eminently religious drama. But even if there had been no belief in a particular class of 'god-boxes,' dramatic representation would still have acquired a religious importance, on the ground of the belief in the magical effects which imitations of things and movements are supposed to exercise upon the things and movements that have been imitated. According to this belief, the god may be conjured to take up his abode in the body of the performer, who imitates what are believed to be his appearance, movements, and behaviour. And the artistic production, which has been called into existence by this principle of sympathetic magic, does not restrict itself to the department of dramatic art. It has attained a great importance within the domain of pictorial imitation.

The transition from dramatic to pictorial art is marked by those masks which, in many tribes, such as the Bellacoolas, the Melanesians, etc., are worn by the dancers in religious dances (cf. Boas, Dall, Woldt, on the Bellacoolas; Haddon and Cod-

rington on the Melanesians). The effect produced on the spectators by these painted faces is partially dependent upon the dramatic acting—the singing and the movements—of the performers. But the masks themselves are, no doubt, apt to awaken feelings of terror and awe. And among all primitive tribes they are regarded as sacred things, scarcely less holy than the religious paintings and statues venerated by more developed nations.

Among the most primitive tribes, however, one scarcely meets with any pictorial representations of the deity. This, probably, has less to do with the technical inability of the lowest savages than with the deficient anthropomorphism in their notions of the deity. Where a god is imagined as some vague and formless being, certain rude and shapeless fetishes may be considered as satisfactory representations or vehicles of the Divine power. But as soon as a god has taken the form of animal or man, pictorial art will be resorted to as a means of facilitating—by virtue of sympathetic magic—communications between man and the divinity.

The images and statues of primitive man must not, however, be interpreted as in any way similar to those pictorial representations of which barbarous—or sometimes even civilized—men avail themselves in order to bring about some effects of magic or illusion. It seems, on the contrary, as if similarity and lifelikeness had not even been aimed at in the idols and ancestral statues of the lowest savages. And what we know about the way in which these statues are made gives us reason to believe that their supposed efficacy rests only partially upon the principle of a magical connexion between similar things. A most instructive example has been quoted by Ellis in his description of West African fetishism. When the Negroes wish to transplant the wood deity from his original home to their towns and villages, they construct a wooden doll of branches taken from the tree in which he is supposed to live. The god is, no doubt, believed to feel a special temptation to take up his abode in the idol made in his own likeness; but it is evident that the material link established by the choice of the wood is thought of as being of no less, perhaps even of greater, importance than the resemblance (cf. Ellis, *Yoruba Peoples*, p. 278; *Tshi Peoples*, p. 81).

When the personality to be represented is not a nature-god but an ancestor, it is still easier to bring about a material connexion between him and the image. Thus the Melanesian religious masks often consist of a part of a human skull which has been painted in glaring colours. And among Melanesian, Malay, and West African tribes the skull of the dead is often inserted in the head of the statues which are made in their likeness (De Clercq in Schmeltz, *New Guinea*; Brenner, *Kannibalen Sumatras*). When the cannibals of Snmatra prepare their celebrated richly-sculptured magical staffs, they always enclose in the head of the uppermost figure of the staff the brain of a young boy, who has been killed for the purpose (Brenner, *l.c.*, cf. also the author's *Origins of Art*, p. 291). It is probable that whatever power such images are believed to possess is given to them chiefly by their material contents. The worship and respect shown to the statues are developed out of a worship of skulls, and the statues themselves have originally been considered, not as images of the body, but as receptacles for some part of the body itself. The more, however, the form of these receptacles has been elaborated, the more there must also arise a subjective illusion, which to the primitive spectators brings the image into connexion with the imitated reality. The crude character of savage statuary is no obstacle to such an illusion, as in primitive peoples the want of technical ability is counterbalanced by a naïve suggestibility. And as soon, on the other hand, as the image itself—as image—has acquired a magical or religious efficacy, there will also appear an endeavour to heighten the suggestive effect by increasing the lifelikeness and the resemblance of the statues. Thus superstitious and religious motives will tend gradually to increase the artistic value of the religious images. The religious statues of the Melanesians and the idols of the West African Negroes, for instance, undoubtedly owe something of their wild and fantastic lifelikeness to an attempt to awaken as intense an impression as possible of the divine powers which they are intended to represent. At somewhat higher stages of evolution, on the other hand, as, for instance, among the Pueblo Indians, religious motives tend to restrain the impressiveness of pictorial representation within some traditionally-fixed limits.

However crude and simple an idol may be, it will none the less, by virtue of its mere existence, bring about some important changes in man's attitude towards his god. By the idol a divinity, who has originally been considered as distant or vaguely localized, becomes concentrated in an approachable vehicle. The pious adorers thus acquire a fixed object for their worship. And the holiness of this object makes it necessary to shelter it from the environment. Thus, around the idol, there naturally arises a temple.

Among the lowest savage tribes these temples have no qualities entitling them to be enumerated among works of art. But at a somewhat higher stage of development, the house of the god is often decorated in a most gorgeous way. The ancestral houses—which are temples in the literal sense of the word—display, especially among some Malaysian and Melanesian tribes, a wealth of ornamental art (see TEMPLES). [See, further, 'Note on the Use of Painting in Primitive Religion,' following this article].

3. **Propitiation in art.**—In order completely to explain the motives which have led to these architectural constructions and decorations, it is not sufficient to appeal to those philosophical and superstitious ideas which have hitherto been mentioned. In the foregoing we have devoted our attention exclusively to man's endeavour to create, by dramatic or pictorial art, a representation of the god—a receptacle, so to say, of the divine spirit—by means of which he may enter into relations with the divinity. Alongside of this endeavour, however, there can always be observed another tendency, which has been of scarcely less importance for the history of art—the effort to flatter and propitiate the divinity. This effort has naturally become more and more marked the more the idea of God has become localized, fixed, and vivified through artistic representation. Thus the ornamental art which is lavished on the decoration of primitive temples may in most cases be interpreted as homage to the god who is believed to inhabit the temple or to visit it. But the tendency to flatter and propitiate is by no means dependent upon the degree of development reached by the idea of God. It manifests itself among tribes who conceive their divinity as a vague, unlocalized, and impersonal being, as well as among tribes who have adopted anthropomorphic or zoomorphic religions. Those of its manifestations, however, that are most important from a general point of view cannot possibly be treated of in this connexion. For there is nothing artistic in the various forms of *material* sacrifice—with the exception, perhaps, of the sacrificial vessels, which, in virtue of their religious purpose, may be elaborated and decorated with a

greater care than ordinary vessels. On the other hand, the *dramatic* and *poetic* forms of sacrifice—prayer and homage—afford us an ample store of examples which exactly fall within the scope of the present article.

A kind of sacrificial purpose may indeed be discovered even in those shamanistic dances which to the superficial observer appear to have their only motive in the desire to bring about a state of exaltation. As every effort is taken to be agreeable to the divinity, the dancers may in many cases nourish a hope of softening the hard heart of their god by their violent exertions. And this seems the more probable since the dances are often connected with self-tortures, *e.g.* scarifications, devouring of disgusting things, etc. But, on the other hand, these feats of endurance may as well be explained either as a means of imposing upon the spectators, or as immediate results—analogous to the self-woundings of hysterical and hystero-epileptic patients—of the pathological insensibility which has been brought about by the exaltation.

It is easier by far to interpret those less exalted dances, songs, and dramatic performances which tend only to provoke, or to express, a state of mild, pleasurable feeling. For the purposes of explanation it is advantageous to make a distinction between those artistic manifestations through which man aims intentionally at flattering or amusing the divine spectator, and those manifestations in which the expression of man's own feelings of thankfulness or happiness appears to be the chief motive. It is to be remembered that these two classes of religious art, which are to be differently analyzed and interpreted, may in reality often be blended together.

The most instructive examples of the first class are to be found among the melodramatic representations given at the tomb of the deceased. As the spirit of the dead man is considered to be a divinity, these performances are undeniably of a religious character. But as, on the other hand, the deceased are believed to preserve all the tastes and likings of the living, the means employed in order to amuse or flatter their spirits will closely resemble the various forms of secular art. As a matter of fact, there is no difference between, *e.g.*, the dances performed before a living king or chief, and the dances performed before the invisible spectator in the tomb. Yet the motives may in some cases give a peculiar character to the manifestations of funeral art. While the performances before a living spectator tend chiefly to produce in his mind an æsthetic pleasure, the funeral dramas and dances may often fulfil a magical purpose. In some cases the dances and songs aim at a stimulation of the spirit, which certainly needs an increase of force in order to surmount all the hardships and the weary wanderings of its transitional life. In other cases, funeral art is evidently intended to produce some terrifying effects upon the invisible enemies of the dead, who are believed to endeavour to possess themselves of his body. Sometimes one may even believe that the survivors try to frighten the spirit itself away from their homes by terrifying dances and pantomimes. Lastly, it is probably in the endeavour to exert a sympathetic influence upon the combats which the deceased has to undergo before he can attain his peace and rest, that survivors hold magic war-dramas (*e.g.* sham-fights and tugs of war) over his grave.

When—as has probably been the case in some tribes—the cult of some individual ancestor is transformed into a cult of a general divinity, and, in consequence thereof, the small spirit-house above the grave is replaced by a temple, some of the ancient funeral performances may still be kept up as religious observances. Although their original purpose is forgotten, their character will scarcely become changed. When magical ideas have died out, magical ceremonies will still survive as a means of religious homage. And when, at a later stage of development, the notion of a divine spectator has been forgotten, the same ceremonies may still be performed as mere amusements, for which the religious tradition offers a welcome justification. Thus it is more than difficult to decide in individual cases whether the artistic manifestations fulfil a religious, a magical, or a purely æsthetic purpose.

The same difficulty meets us when we have to do with purely lyrical dances and songs, through which the performers express their gratitude and devotion to the god. Psychologically there is an easy transition from the feeling of joy—when it is pure and complete—to the feeling of loving thankfulness. The fulness of the emotion seeks expression, and the expression seeks some one to whom it may address itself. Thus in happiness we experience a desire to imagine a god who may receive our gratitude. And among peoples who consider every happy occurrence as a benefit which has been especially accorded to them by the divinity, pleasure will easily cause some manifestations which embrace both emotions in one common expression. As the most typical and best known example of this kind of religious art, we may quote the song and dance of the Israelites after having passed the Red Sea (Ex 15). It is true that in this case the poetic and orchestic hymns were called forth by an exceptional and unique occurrence. But there are always some regular events of happy importance in the life of primitive man which will tend to make thanksgiving ceremonies a fixed institution. Thus the return of the spring will be saluted with dance and song among the nations that have been suffering from long and hard winters, *e.g.* the Eskimos, the Chukchis, etc. Among agricultural nations the occasion of a bountiful harvest will give rise to some joyful festivals, in which the participants amuse themselves at the same time as they pay homage to their divinity. Such festivals seem to be especially frequent among the North American Indians.

The dances performed at these ceremonies, as has already been mentioned, closely resemble the manifestations of pure and simple joy. But there are some gestures which, although originally connected immediately with the expression of this simple feeling, may gradually become peculiar to the honorific ritual. Thus hand-clappings (which, as is well known, accompany states of great joy both among savages and among children) have, among Polynesians as well as among the ancient Egyptians, acquired the sense of a pious and reverential gesture, by which the adorers manifest their love and thankfulness towards the god.

4. **Ethical instruction in art.**—The facts hitherto quoted have referred almost exclusively to an art which, while it addresses itself chiefly to the divine spectator, aims at bringing about an immediate relation between him and his adorers. This indeed appears to be the prominent purpose of religious practices among the most primitive tribes. But it must not be thought that savage and barbarous religions were entirely devoid of a didactic and moralizing side. Even the shamanistic dances may, as has already been pointed out, pass over into small pantomimes, by which the spectators are initiated into the transactions between the shaman and the god. And however much magical ideas may have to do with these dramatic and pictorial representations of the divinity, the theurgic purposes will soon combine themselves with the intention of explaining and illustrating the facts of religious history. In such dramatic representa-

tions as, for instance, the great Kachina dance of the Zuñi Indians, this didactic tendency seems to be especially prominent. In masquerades of the type represented by the Mumbo Jumbo dance in Central Africa and the 'Kinas' of the Fuegians, we meet with the moral, or pseudo-moral, motive of terrorizing women and children into subjection by showing them the awful aspects of the gods. Finally, in the dramas, songs, and dances at the initiation of boys and girls into maturity, magical, didactic, and moralizing purposes have all combined to create the most marvellous manifestations which are to be met with in the department of primitive art. It is true that the instruction conferred at these ceremonies refers chiefly to practical utility. But even among peoples at so low a degree of development as the Australian aborigines, religious and, one might say, philosophical doctrines are expounded to the young men. Thus in a kind of miracle play, to which some curious analogies have been found among the Fijians and the East Africans, the old men enact before the boys a representation of death and resurrection. Although less elaborate in dramatic detail and stage-management, the fragmentary dramas in which the American Indian shaman-novitiates are supposed to be killed and recalled to life present to us a scarcely less interesting illustration of the same great thought. There are indeed, especially in this last example, good reasons for assuming that the simulated death and resurrection are supposed to effect, in a magical way, some kind of spiritual regeneration in the novices on whose behalf the drama is performed. But while admitting this, we may nevertheless take it for granted that an endeavour to elucidate the doctrines of the priesthood may be combined with the magical rite in question. And similarly with regard to analogous ceremonies in other tribes, we feel justified in assuming the presence of a didactic purpose. The more the dogmatic system becomes fixed and elaborated, the greater need will there ensue of affording these doctrines a clear expression in the objective forms of art.

It is evident that poetry more than any other art is fitted to serve such a purpose. And, in fact, among several tribes at the stage of higher savagery and barbarism there have been found some more or less complete mythical poems. These songs, however, will be more properly treated of under the headings MYTHOLOGY, CHARMS, and HYMNS.

LITERATURE.—In addition to the works mentioned above, the following books may be consulted with advantage:

On DECORATION and ORNAMENT in connexion with religion: Henry Balfour, *The Evolution of Decorative Art*, London, 1893; A. C. Haddon, *Evolution in Art, as illustrated by the Life Histories of Designs*, London, 1895; A. Hamilton, *The Art-Workmanship of the Maori Race*, Dunedin, 1896 f.; A. R. Hein, *Die bildenden Künste bei den Dayaks auf Borneo*, Vienna, 1890.

On MUSIC, DRAMA, and POETRY in connexion with religion: C. Letourneau, *L'évolution littéraire dans les diverses races humaines*, Paris, 1894; Posnett, *Comparative Literature*, London, 1886; R. Wallaschek, *Primitive Music*, London, 1893.

On the general ÆSTHETICS of primitive man: E. Grosse, *Die Anfänge der Kunst*, Freiburg i. B. 1894; Yrjö Hirn, *The Origins of Art*, London, 1900.

YRJÖ HIRN.

NOTE ON THE USE OF PAINTING IN PRIMITIVE RELIGION.—Besides the realistic and symbolic representation of his divinities or of his religious conceptions and aspirations by means of various art methods—images or statues, carvings, sacred dances, sacred hymns and chants—painting has occasionally been brought into the service of religion by primitive or savage man, as well as by his more civilized successor. The purpose of this note will be sufficiently fulfilled by reference to such painting in the Stone Age, among the rudest savages, and with a semi-barbaric people. In all alike the ends aimed at are precisely the same as those intended by the image or carving—the obtaining of power over or from the being represented, the vivid depicting of the worshipful object or person so that the worshipper, by means of the picture or symbol, may have his religious sense re-awakened, or may also be brought into contact and communion with the divinity. In the first example to be referred to—that of the Palæolithic cave-artists—the paintings are not those of divinities but of animals. Even if these had no totemistic significance, the pictures played a highly important part in the magico-religious ceremonies which, *ex hypothesi*, were performed before them.

Within recent years, French archæologists have discovered the existence of engravings and paintings of animals on the walls of caverns in Périgord and the Pyrenees. Similar paintings were, almost simultaneously, found in grottoes at Altamira in Spain. They are executed on rocks in the darkest part of the caves, far from the entrance. Artificial light must therefore have been employed in designing them, as is proved by the discovery of a stone lamp ornamented with an incised figure of a reindeer, and thus dating from the Reindeer age of the Palæolithic epoch—the age of simple engravings with which the great Glyptic period of Quaternary times terminated. Probably these wall engravings and paintings belong to this closing period also. The animals represented are mammoths, reindeer, bison, oxen, horses, goats, saigas, etc. Some of these are engraved; others, besides being engraved, have the outlines filled in with reddish-brown colour, or, in some cases, bluish-black, exactly as totemic grave-posts used by the American Indians have incised figures painted over with vermilion; in others the engraving lines are accentuated by a thin band of colour. Frequently a design is outlined in black, and the surface covered with red ochre. We are yet ignorant how the colour was applied; it may have been daubed on by means of some primitive brush, or blown from the mouth, as is the case with some Australian rock-paintings. The interest of these paintings, for us, consists in the theory regarding their purpose enunciated by a French *savant*, M. Salomon Reinach. He notes regarding these paintings as well as Quaternary art in general, that *motifs* borrowed from the animal world are the most numerous, and that the animals represented are those which form the food supply of a nation of hunters and fishers. They are *desirable* animals; others, not represented, *e.g.* the lion, tiger, jackal, etc., are undesirable, and this, he believes, is not the result of chance. Among modern savages it is not uncommon to find that the image of a creature or object is held to give its author a *prise* over the object or creature through a process of mimetic magic. Hence many savages object to be drawn or painted. In the same way pantomimic and dramatic exhibitions have for their purpose the actual result of what is thus imitated symbolically (rain-making, animal-dances). Among the Central Australians, in order to cause a multiplication of such a totem-animal as the witchetty-grub, the members of this totem clan assemble before a rocky wall on which are painted great representations of the grub, and there they sing in chorus, invoking the insect to multiply and be fruitful (Spencer-Gillen, *Native Tribes of Central Australia*, 170). Similar ceremonies, including the depicting, more or less symbolically, of the desired animal, are employed by other clans, *e.g.* the emu clan. The blood of some members of the clan is shed on the ground, and on the reddened surface is painted with coloured earth and charcoal an emu, along with yellow and black circles representing its eggs. Many other totemic designs, mainly of a symbolic

character, are painted on rocks, and are tabu to women and children.

M. Reinach notes the fact that the Quaternary paintings are executed on the walls of caves far from the entrance and at the end of corridors difficult of access, as if with a view to secrecy. Not only so, but the caves are in total darkness, and, as has been said, the paintings must have been executed and looked at by means of artificial light. Hence the impossibility of assuming that they were executed for mere pleasure. They must have had a religio-magical character, and their purpose was to secure, 'by magical practices, the multiplication of the game on which depended the existence of the clan or tribe. Ceremonies, in which adults alone took part, were performed with that end in the darkest part of the cavern, entrance to which was forbidden to the profane.' These paintings formed the object of the cult, addressed not to the individuals represented, but to the species, over which the worshippers had influence by reason of the individual being thus depicted. The animals, as a result of these ceremonies, would multiply and would frequent the neighbourhood. The various sculptures and engravings of the Reindeer age may have had such a purpose also, while the so-called *bâtons de commandement* doubtless played their part in magical and totemistic ceremonies, as M. Bernardin had already suggested in 1876 (*Revue Savoisienne*, Feb. 1876). Thus the art of the period was neither a luxury nor an amusement, but the expression of a rude yet intense religion, based upon magico-religious practices having for their object the attainment of the food supply. While we cannot admit that Palæolithic man's artistic powers were used only for magico-religious purposes—the beauty of some of his designs, and the care in reproducing exactly what he saw, suggesting the artist pure and simple—it could not fail that they should be frequently employed in such ways as M. Reinach has suggested. Everywhere else this has occurred, and art has been freely enlisted in the service of both religion and magic.

In the times of transition to the Neolithic age, though the brilliant art production of the earlier period is unknown, art was again used in the cult. This, already shown by the symbolic engravings and markings on rocks, megalithic monuments, etc., is further suggested by the painted pebbles found by M. Piette at Mas d'Azil. Some of the designs represent numbers, others are alphabetiform signs corresponding to the letters of the later Ægean and Cypriote syllabaries; others are pictographs, with or without a symbolic meaning. It is in these last that we may find the use of painting as an accessory to the cult. Among them are the cross by itself or within a circle, a circle with a central dot (solar symbols, some of which occur as engravings on the megalithic monuments of the Neolithic age), the serpent, tree, etc. All are painted with peroxide of iron upon white pebbles. Later, the carved symbols of the Neolithic period, *e.g.* the symbolic axes and female figures (divinities) on the walls of the grottoes of La Marne, etc., show traces of having been covered with colour, like the carved images of later ages.

For the cave paintings see *L'Anthropologie*, 1902; *Revue mensuelle de l'école d'anthrop.* 1902. M. Reinach's paper will be found in *L'Anth.* 1903, p. 257. See also his *Story of Art throughout the Ages*, ch. i. M. Piette's discoveries are described in *L'Anth.* vi. 385, xiv. 643 f. For the symbolic carvings of La Marne, see Cartailhac, *La France préhistorique*, 240 ff.; Baron de Baye, *L'Archéologie préhistorique.*

Some Australian instances of the use of painting for magico-religious purposes have already been referred to. Among the Northern tribes of Central Australia similar paintings are used in the totemic ceremonies. The men of the Thalaualla or Black Snake totem, when they perform the Intichiuma rites for the purpose of increasing the numbers of this snake species, paint partly symbolic and partly imitative designs on the ground with red ochre and other coloured earths and charcoal. These depict the mythic history of the ancestral snake, which is also dramatically represented (Spencer-Gillen, *Northern Tribes of C. A.* 302, 737). Similar ground paintings are used in the Wollunqua snake totem ceremonies. Each one represents, 'or rather was associated with, the various spots at which the animal stood up, performed ceremonies, and left spirit children behind him' (*op. cit.* p. 239). In this case the paintings are entirely symbolic, and consist of concentric circles and curved lines outlined in white dots on a ground of red or yellow ochre, painted on the surface of the earth previously prepared for the purpose. Spencer and Gillen describe at some length the sacred rock-drawings of the Central Australian tribes. These, which are usually executed in red ochre, are mainly conventional geometrical designs, all of which, however, have a definite meaning to the natives who use them. They are seen only by the men who have been initiated, and are painted on the rocks near the place where the sacred *churinga* of the clan are deposited. Among other Australian tribes, drawings and paintings on the ground or on trees are also found in connexion with the *bora*, or sacred initiatory ceremonies, and are shown only to the initiated. Sometimes gigantic figures of divine beings—Baiamai, Gunnanbuly, etc.—are outlined in the turf or formed out of a heap of earth; in other cases sacred figures are cut in the bark of trees. Similar figures are also painted with red ochre and pipe-clay on trees, or on sheets of bark, which are then hung up on or rested against the trees. The rock-paintings, which may or may not have a religious or mythic significance, are either stencilled by the object to be depicted being placed against the rock, which is moistened and upon which the colour is blown or applied with a kind of brush; or painted in outline, the inner space being sometimes filled in with the same colour, or shaded by strokes of some different colour.

With the symbolism of the painted pebbles of Mas d'Azil may be compared the designs painted or incised on Australian *churinga*. The *churinga* is a piece of wood or stone of long oval shape supposed to have been dropped by a spirit ancestor as he, for the purpose of re-incarnation, entered the body of a woman. The child thus born becomes the owner of the *churinga*, which is deposited, along with those of the other members of his totem clan, in a sacred place. The design has in each case a distinctive meaning, connected with the totem-beliefs of the people, and generally illustrating some incident of the mythic history of the totem ancestor. Among the designs are concentric curves and circles, parallel lines, etc. These exactly resemble designs painted on the pebbles, which also resemble the *churinga* in shape, as well as those incised on the megalithic monuments of the Neolithic age. It has been suggested that the Azilian pebbles may have been the *churinga* of a pre-historic totemistic people (A. B. Cook, *L'Anthropologie*, xiv. 655). In any case, the analogy of Australian sacred art shows that they had a religious value.

For Australian art see Spencer-Gillen, *Northern Tribes of Central Australia*, p. 696 ff., and *Native Tribes*, p. 614 ff.; Stirling in *Report of Horn Scientific Expedition*, 'Anthropology,' pt. iv.; R. H. Mathews, *JAI* xxv. 146 ff., 299 ff.

Among the more cultured tribes of the North American continent—Zuñis, Tusayans, South Californians, and Navahos—a curious kind of painting is used as an adjunct to certain religious ceremonials whose purpose is usually the healing of disease, and which are characterized by great elaborateness

and length. As practised among the Navaho Indians, the ceremony continues for nine days, and is conducted by a theurgist and several assistants. Every part of the ritual has a special significance, and must be performed with the strictest attention to traditional detail, lest fatal consequences should ensue from the least infringement of it. Several men personate the gods and goddesses and take part in the ceremonies; each day's proceedings include pantomimic action, symbolism, offerings to the gods, singing of sacred chants, and prayers, and the whole ends with an elaborate dance. The whole ceremony is known as *yebitchai*, a word meaning 'giant's uncle,' and, as in several Australian mysteries, it is used to awe children, who, on the eighth day, are initiated into the ceremony, and discover that the men personating the gods are their fellow-tribesmen. The paintings are made with dry sand and pigments of various colours sprinkled on a ground of yellow sand with the thumb and forefinger of the operator. The colours used are yellow, red, white, black, and a blue prepared from a mixture of charcoal with white, red, and yellow sands. These colours, as well as the pictures themselves, are made according to instructions given by the gods, as the Navaho myth of 'The Floating Logs' relates. All the paintings represent gods and goddesses, usually about three feet in length, and depicted in a somewhat conventional manner. Face, arms, and legs are carefully done; the body is long and narrow; each divinity is usually depicted with various emblems; a god is denoted by a round head, a goddess by a rectangular head. Considering the method in which the colours are employed, the resulting picture is a marvellous piece of art work, full of minute details, while many of the colour lines in the dress and sash decorations of the divinities are like threads. The first sand-painting is made on the fifth day of the ceremony, and represents three divinities; in the painting of the sixth day, there are four pairs of divinities, male and female, each sitting on the limb of a cross, with their appropriate emblems; outside the painting are four gods, one on each side, and the whole is surrounded by the rainbow goddess. The seventh day's painting represents fourteen divinities in two rows, again surrounded by the rainbow goddess, 25 ft. in length. Twelve divinities are shown in the eighth day's painting; in their midst is a huge picture of a corn-stalk, the main subsistence of life; a square base and triangle represent clouds, and three white lines the roots of the corn. The rainbow goddess again surrounds this picture. A detailed account of this last picture will show its symbolic nature. The divinities are the Zenichi, who live in a rock, represented by a long black parallelogram. Those parts of their bodies and faces which are painted red, denote red corn; black signifies black clouds. Zigzag lines on the bodies mean lightning; certain black lines round the head, zigzagged with white, are cloud baskets holding red corn.

All these paintings are arranged on the floor of a medicine-lodge in which are assembled the invalid, the theurgist and his assistants, and certain privileged spectators. In each case the sick man is seated on the central figure of each painting, having previously sprinkled the design with sacred meal. Several ceremonies, chants, and prayers follow, during which one of the representatives of the gods touches the feet, heart, and head of each figure respectively with his right hand, each time touching the corresponding parts of the invalid's body. This appears to be the vital part of the ceremony, bringing the sick man into relation with the gods through their pictures and by their representative, thus transferring their power to him so that his disease may be overcome. This seems to be certain, as, before the pictures are obliterated at the end of the day's proceedings, the people crowd round to touch them, and then, having inhaled a breath over their hands, rub their bodies so that they may be cured of any malady, moral or physical, by the divine effluence. The sacred pictures thus exercise the *quasi*-sacramental power of the idol, fetish, or symbolic image, wherever found. Being like the gods, and made, as is believed, according to divine directions, they have all the power of the gods themselves. So the colours used in other American Indian ceremonies are believed to have been originally given by the divine *manitous* (see *BE*, Fourteenth Annual Report, p. 91).

James Stevenson, *Ceremonial of Hasjelti Dailjis and Mythical Sand Paintings of the Navajo Indians*, with illustrations of the paintings, in *BE*, Eighth Annual Report, 1891.

Reference may also be briefly made to: (1) Zuñi religious paintings on vessels, representing the Creation and other myths current among the people. The colours themselves are symbolic (see Cushing, *Study of Pueblo Pottery*, 1886; J. W. Fewkes, *Journ. of Amer. Ethnol. and Archæol.* ii. 1892).—(2) Painting or tatuing the body (*a*) for magical purposes, as among the Aracan hill tribes and Burmese (St. John, *JAI* ii. 235; Symes, *Embassy to Ava*, p. 312, and others); (*b*) with totem designs, *e.g.* the tribes of Malacca (Haddon, *Evol. in Art*, p. 252 f.); (*c*) on certain ceremonial occasions, as with the Australians (Spencer-Gillen, *op. cit.*); (*d*) for mourning.—(3) Painting the bodies or skeletons of the dead, usually with red, but occasionally (Andaman Islanders) with yellow—a custom which, beginning apparently in late Palæolithic times (grottoes of Baoussés-Rousses, Mentone), occurred frequently in the Neolithic period, and is found among various savages—Australians, American Indians, etc. (Cartailhac, *La France préhistorique*, 105, 292, 302; *L'Anthropologie*, vi. 4; *BE*, First Report, p. 107; Grosse, *Anfänge der Kunst*, p. 42).—(4) Painting totem-designs on weapons, furniture, houses, totem-posts, and grave-posts (Frazer, *Totemism*).—(5) The use of pictographs to illustrate chants used in religious mysteries and as mnemonic symbols among the American Indians (*BE*, Fourteenth Report, p. 107); see also TATUING, TOTEMISM.

These various examples show that, like every other branch of art, painting, realistic or symbolic, has been used by man to set forth his religious beliefs, to represent or symbolize his divinities, or, in accordance with his religio-magical theory of the universe, to gratify his wishes, to act as a protection, or to transfer the power of the person or object depicted to himself. 'Art for art's sake' was not unknown to primitive and savage man, but on the whole he made it subserve a useful purpose, *e.g.* in bringing it under the sway of religion. It is thus scarcely correct to say, as Grosse does (*Anfänge der Kunst*), that the art of primitive peoples is not connected with religion. Whatever be its origin, whether arising from some instinctive impulse to imitate the things man saw around him, or from some other cause, art soon lent itself to enhance and satisfy man's needs. At the same time, the purely æsthetic pleasure on the part of the artist in making an artistic object or design which was to be used for religious or other purposes must not be overlooked.

J. A. MACCULLOCH.

ART (Primitive and Savage). — Before the acquisition of the art of writing by any people, the only method of recording facts or ideas, except by word of mouth, is by means of some kind of graphic representation. The carving or drawing may be intended to be realistic, though, even so, the realism may be imperfect; but one frequently finds that a suggestion of an object answers all the purpose of a representation of the whole object. Thus, an animal may be indicated by a limb, a zigzag may stand for the wings of an insect, bird, or bat; in other words, a convention may thoroughly satisfy the need of expression. When an object is decorated with conventional designs, these may be so remote in form from their original that they are usually described as 'geometric,' and

consequently they stand the chance of no further interest being taken in them; whereas, if information be obtained from the designers, it is nearly always found that they have a significance that cannot be discovered by inspection alone. Experience has proved that designs which have frequently been regarded as merely decorative have an import that could not otherwise have been predicated for them. Hence, the futility of an endeavour to elucidate the significance of designs without an adequate investigation in the field.

At the outset it must be acknowledged that all the designs of a 'primitive' people are not necessarily significant. The æsthetic sense which manifests itself in symmetry, balance, and decoration seems to have been present, to a greater or less degree, from the earliest times of which we have any record; and it is often quite marked among the less advanced peoples of the present day. It is useless to try to read a meaning into simple patterns unless we are sure of the key, as they may very well be nothing more than an expression of the artist's feeling for beauty as he experiences it, or as limited by his skill or by the materials at his disposal. For example, it appears useless to attempt to extract significance from the patterns engraved on bones by Palæolithic man, or from most of the designs of other pre-historic folk. The same applies to the decorative art of other peoples; indeed, the greater part of the decorative art of present-day civilization is meaningless; but it may for all that satisfy an artistic craving, or at all events it is an acknowledgment of an æsthetic need. The particular designs, however, may be suggested to the artist by what he sees around him, and he may apply them without relevancy, merely to please himself. It seems fairly certain that it is only among the culture-folk that inventive fancy has full play. The nature-folk may produce intricate or complicated designs, but these are nearly always found to be modifications or groupings of simple motives, and these latter are generally those which lie ready to hand. For example, mat-making and basketry are of universal occurrence where the materials exist for their manufacture; the plaits of the former and the weaves of the latter are limited in number, but the various sequences give rise to patterns. By means of differently coloured strips in the original foundation or applied thereto, or by pigments or other devices, these patterns can be emphasized, or new ones produced; but these are practically confined to straight and angled lines, chequers, and the like. These patterns are always before the native eye, and it is no wonder that they are transferred to clubs, wooden bowls, or pottery. The designs are incidental to the technique of plait-work, but are inappropriate to most of the other objects to which they are applied, although they satisfy the artistic craving. The same applies to lashings and various kinds of string- and thong-work; sometimes carved representations of string or braid may be expressions of an antecedent fastening together of separate parts, but more often they are merely decorative.

Artistic representation may be solely for the purpose of *depicting objects*, or for *recording events*, or for *giving information*, as in the case of much of the interesting graphic art of the Eskimos, or of the ruder attempts of certain Siberian tribes. Probably to this category belongs the pictorial art of the ancient cave-dwellers of Western Europe, who painted in caves or engraved on bone the animals that were daily before their eyes, as did the Bushmen of recent times; but the latter frequently depicted hunting scenes, and even fights with Zulus. The pictographs on the buffalo robes of the Dakotas, the most famous of the 'winter counts,' as they are termed, indicate the most salient incident of the previous year, and thus a pictorial history is painted which in this case extended for about seventy years (Mallery, *Fourth* and *Tenth Ann. Rep. Bureau Eth.*). The pictorial blazings or notice boards of the Alaskans gave definite information to friends and travellers (Mallery, *l.c.*).

Apart from the foregoing and the utilization of decorative art as an exhibition of wealth or for social distinction, we find that *magic* and religion have exercised a preponderating effect on the artistic impulse; nor is this surprising, considering the vast importance they play in the life, thought, and feeling of mankind. From the nature of the case that aspect of sympathetic magic known as 'homœopathic' lends itself to artistic treatment rather than does the 'contagious.' The representation of an object is as effectual as the object itself; and as there is virtue in words and power in a name, so there is efficacy in a pictograph, which, after all, is a graphic as opposed to an oral or written expression. According to von den Steinen (*Unter den Naturvölkern Zentral-Brasiliens*, 1894), certain designs on a Bakaïri paddle represent various kinds of fish, some of which are drawn within the meshes of a net; and the author believes that the object of this decoration is simply to bring fish close to the paddle so that they may be caught in the fisherman's net. Many other examples of simple magical pictography might be cited, but the most elaborate examples are those recorded by Vaughan-Stevens from the Semang and Sakai of the Malay Peninsula. These are hunting jungle-folk who undoubtedly come under the unsatisfactory designation of savages. The English reader will find the fullest account of their extraordinary designs in Skeat and Blagden's *Wild Tribes of the Malay Peninsula*. There has been a good deal of uncertainty concerning the *bona fides* of Vaughan-Stevens, but these authors are inclined to credit in the main the explanations given by him of the engravings on combs and bamboos which he undoubtedly collected from the natives. Some of the Sakai bamboo designs represent diseases, and the whole design on a bamboo is intended as a prophylactic against a specific disease. One bamboo design represents the swellings caused by the stings of scorpions and the pricks of centipedes; these creatures also are engraved together with an Argus pheasant. The significance of this bamboo is that, as the Argus pheasant feeds on centipedes and scorpions, its help is invoked against them by striking the bamboo against the ground. The decoration of one bamboo is a charm for rain; one is a pictographic formula to enable a man who wishes to build a house to find easily the necessary materials; one is supposed to protect the harvest and the plantations round the house from injurious animals; another helps women to catch fish, and also protects them from poisonous ones. The Semang women possess numerous combs, which are decorated with various designs, each of which is a prophylactic against a particular disease. When a woman goes into the jungle, she inserts at least eight of the combs horizontally in her hair, so that the disease-bearing wind-demon, who is the emissary of Kari, the thunder-god, on meeting the protecting pattern may fall to the ground; but should the woman not wear a comb with the appropriate pattern, the disease is deposited on her forehead, whence it spreads over the body. In a recent paper, Dr. Westermarck (*JAI* xxxiv. 211) has demonstrated the use of designs in averting the malign influences of the evil eye in Morocco. Silver amulets and numerous objects of everyday use are decorated with crosses, and

groups of five knobs or two intersecting squares; all these indicate the five fingers or finger-tips, which are employed in a gesture to throw back the harmful gaze of those who possess an evil eye. Similar designs and representations of eyes, often as triangles, decorate saddle-cloths, pottery, money-boxes, leather pouches, etc., and are embroidered upon or woven into the garments of the people, so that at all times and from all points they, their animals, and their personal effects may be protected from premeditated or casual harm.

Professor Maspero says of the decorative art of Ancient Egypt: 'The object of decoration was not merely to delight the eye. Applied to a piece of furniture, a coffin, a house, a temple, decoration possessed a certain magical property, of which the power or nature was determined by each word inscribed or spoken at the moment of consecration. Every object, therefore, was an amulet as well as an ornament' (quoted by Goodyear, *The Architectural Record*, iii.). The lotus is the parent, writes Hamlin (*Architect. Rec.* viii.), of a greater number and variety of ornament-forms than any other *motif* known. It was the most conspicuous and beautiful flower known to the Egyptians, and its intrinsic decorative value, as well as its importance in their mythological symbolism, gave it an extraordinary vogue as an ornament. Associated as it was with Horus and Osiris, with the idea of Nature's reproductive power, with the life-giving Nile, and with all the solar elements of Egyptian mythology, it was in constant and universal use as a symbol and amulet, both in its natural or concrete form, and in decorative representations of the flower. Whether or not its symbolic use as an amulet preceded or accompanied from the outset its decorative use as an ornament, it underwent the operation of that universal law by which ornament forms lose in time their original significance and receive new and diverse applications. Hamlin also states that symbolism alone does not sufficiently account for the fact that four-fifths, perhaps nine-tenths, of the ornamental patterns of Egyptian art are based upon the lotus; the real reason for the extraordinary vogue of this single *motif* is to be found in the decorative possibilities of the type itself. The lotus seems to have been symbolic of the sun. It was also largely employed in funeral rites, and also symbolized the resurrection; but this latter idea was associated in the Egyptian mind with reproductive power. As the intensely religious mind of the ancient Egyptians was permeated with the problems of death and elevated by the prospect of immortality, it is not surprising that the flower which symbolized the resurrection should be depicted in such profusion in their tombs and elsewhere. How the Grecian artists borrowed this motive and transfigured it, how it was still further modified by the Romans, and how it spread to the British Islands through Celtic and Scandinavian channels, has been described by Goodyear (*Architectural Record*, ii. iv., 'The Grammar of the Lotus'), Hamlin (*loc. cit.*), Coffey (*Journ. Roy. Soc. Ant. Ireland*, 1894–1895), and Haddon (*Evolution in Art*).

Whereas, for our present purpose, magic may be regarded as a direct action by means of which man endeavours to accomplish his desire, *religion* is the recognition of some outside power or entity who can give aid directly or indirectly, or with whom an emotional relationship has been established; though it is not always easy to distinguish between magic and religion. In a paper on the decorative art and symbolism of the Arapahos, who are typical Plains Indians of the W. Algonquin linguistic stock, Kroeber informs us (*Bull. Am. Mus. Nat. Hist.* xviii. pt. 1 [1902]) that the closeness of the connexion between the symbolism and the religious life of the Indians cannot well be overestimated by a white man. Apart from the decorative symbolism on ceremonial objects, the making of what have been called tribal ornaments is regularly accompanied by religious ceremonies. Some styles of patterns found on tent-ornaments and *parfleches* ('rawhide bags') are very old and sacred, because originating from mythic beings. A considerable number of objects are decorated according to dreams or visions. Finally, 'all symbolism, even when decorative and unconnected with any ceremony, tends to be to the Indian a matter of a serious and religious nature' (Kroeber, *loc. cit.* p. 150).

While totemism is largely a social factor, it has a religious aspect which is often not far removed from magic. When a people is in the totemic stage, the human members of the kin or clan are prone not only to carry about with them portions or emblems of their totem, but to mark their body by paint, scarification, or tatu with realistic or conventional representations of their totem. Not only so, but they may decorate their personal belongings with their totem (cf. Spencer and Gillen's *Native Tribes*, and *Northern Tribes*, and the *Reports of the Camb. Anth. Exped. to Torres Straits*, vols. iv. v. vi.). The Western Torres Straits Islanders frequently engrave on bamboo, tobacco pipes, drums, and other objects, representations of their respective totems; almost without exception the latter are animals. Not only the totem animals are pictured, but in a few instances others as well, of which there is no evidence that they ever were totemic. In this case it would seem that the habit of animal-drawing has been extended from totems to a few other forms. On the adjacent mainland of New Guinea we find plant totems associated with animal totems, and they too appear in the decorative art. At the mouth of the Fly River, plant totems greatly preponderate, and certain pipes and drums brought from some little distance up that river are decorated solely with plant motives. It is only when we come to the opposite extremity of British New Guinea—the Milne Bay district—and the neighbouring archipelagoes, that we again meet with animal forms, more especially birds, frequent in decoration, carved realistically and conventionally, and modified into a wealth of scrolls, curves, and circles; and once more we find totemism as a living cult (cf. Haddon, 'Dec. Art of Brit. New Guinea' in *Roy. Irish Acad.* 1894). Also in parts of Melanesia, where there is totemism, frequent representation of animals occurs (Stephan, *Südsee-kunst*, 1907). It would be safe to say that where totemism exists there is usually an expression of the cult in decorative art; but it would be very rash to assume totemism wherever we find representation of animals or plants.

Throughout the greater part of America the belief in guardian spirits has led to representations of the *manitou*, *wahubi*, *okki*, *sulia*, *nagual*, or by whatever name it may be termed. More especially is this the case along the North-West Coast, where blankets, boxes, hats, spoons, pipes, as well as the so-called 'totem posts,' are decorated or carved with representations of the guardian spirit of the owner or those of his ancestors. These highly esteemed and jealously guarded crests and emblems originated among the Salish, according to Hill-Tout (*Trans. Roy. Soc. Canada*, sect. ii. 1901), from two sources. The crest springs from pictographic or plastic realization of the *sulia* [or 'dream-totem']. The totemic (*sic*) emblems and insignia are symbolic records of some event or adventure more or less mythic in the life of the owner or of his ancestors from whom he inherited them. In neither case do they regard themselves

as descendants of their 'totems.' Speaking of the more northern of the North Pacific group of peoples, Boas says (*Rep. U.S. Nat. Mus.* 1895–1897) that each man acquires a guardian spirit, but he can acquire only such as belongs to his clan; thus a person may have the general crest of his clan, and besides use as his personal crest such guardian spirits as he has acquired. This partly accounts for the great multiplicity of combinations of crests on the carvings of these people.

Totemism frequently gives way also before an ancestor- or a hero-cult, and thus the human form makes its appearance in religious art. In the Papuan Gulf district the great bulk of decorated objects are ornamented with representations, sometimes highly conventionalized or degraded, of the human face (cf. *Dec. Art Brit. New Guinea*). In this district, at the initiation ceremonies, masks are worn to simulate the ancestral gods, and bull-roarers are whirled; these and other ceremonial objects, as well as the carved wooden belts that only warriors may wear, are decorated with faces or figures of the same apotheosized ancestors. It is highly significant that this is the only region of British New Guinea where 'gods' have been evolved (Holmes, *JAI* xxxii. 426 ff.); and at the same time it is the only district where the human form or face enters at all prominently into the decorative art of the natives, but here the human face is the dominant motive. It is worthy of note that, while animal forms are common in art in the extreme west and east of British New Guinea where totemism is rife, and the human face in the Gulf district where there are 'gods,' in the central district, where, so far as is known, there is no religion as defined above, the decorative art is devoid of animal or human representations, and is characterized by 'geometric' designs. While an ancestor-cult may develop into the worship of gods, the same result may be arrived at by other roads. In Torres Straits a hero-cult, presumably introduced from New Guinea, had invaded the original totemism, and we can trace the amalgamation of the old cult with the new, and its final disappearance and replacement by the higher religion. In the intermediate stage we have a strange confusion of the totem animal with the human hero. In the ritual this was symbolized by the wearing of masks of animal form, or of part animal and part human form. The same occurs also in the Papuan Gulf district, and occasionally these masks are represented pictorially. There does not appear to be any record of a totem animal actually becoming metamorphosed into human form. It may have occurred, but, judging from the Papuan evidence, it is more probable that a substitution took place owing to contact with an ancestor- or hero-cult, and during the transition the demi-god would partake of his double ancestry. In this way we can explain the beast-headed divinities of ancient Egypt. That a part of the religion of ancient Greece had its origin in totemism may be admitted. The ox, the mouse, wild beasts and birds, and similar associates of the Olympian hierarchy, whatever they were to the enlightened pagans who endeavoured to rationalize and even to spiritualize them, are to us milestones which mark the road traversed by Hellenic religion; the Egyptian had been petrified at an earlier phase. When gods had been evolved, it was very important for men to retain the remembrance of those family ties between them and mankind which were in danger of being snapped through the length to which they were drawn and the degree of attenuation which consequently ensued. The statements of tradition as to the descent of mortals from gods are reinforced by the representations of artists of the unlettered races, just as they are enshrined in the written cosmogonies of more cultured folk, the main difference being that anybody may understand the one if he knows the written characters, whereas the other is practically a pictograph, and requires the interpretation of the natives who have the traditional knowledge of the symbols. We are probably justified in assuming that very early in time the custom existed (still widely spread among backward peoples) of carving or painting the pedigree of the man from the god, of the human from the divine, as at a still earlier time the reverse process had taken place. Gill states that significance is 'invariably attached to ancient Polynesian carving' (*Jottings from the Pacific*, 223). Several investigators have studied the peculiar wood-carving of the Hervey Islanders (Haddon, *Evolution in Art*), and many of the designs can be shown to be modifications of the human figure. Stolpe says: 'Ancestor-worship is a characteristic feature of Polynesian religion. The souls of the departed become the guardian spirits of the survivors. Their worship demanded a visible form . . . it appears to me that the peculiarly hafted stone adzes of the Hervey Islands have a religious signification, that they are especially connected with ancestor-worship, and that they were probably the very symbols under which this worship was performed' (*Ymer*, 1890, 232, 234). Colley March first suggested that the carved shafts of the sacred paddles and adzes were pedigree-sticks, the patterns being 'the multitudinous human links between the divine ancestor and the chief of the living tribe' (*JAI* xxii. 324). This seems to be a probable explanation of these beautiful carvings, which thus illustrate the origin of man from his god, and his continued connexion with and dependence upon him. What more can religious art teach?

Symbolism is a universal method of religious expression, and most of the decoration in connexion with shrines and altars has this significance. Primitively this was entirely the case, as may be seen from the researches of Cushing, Fewkes, Voth, Stevenson, and others on the religion and ceremonies of the Pueblo Indians of New Mexico and Arizona (*2*, *15*, *21*, and *23 RBEW*; *Field Columb. Mus.*, Anth. Ser. iii.; *Journ. Am. Eth. and Arch.* i.–iv.; *Am. Anthropologist*, and *JAFL*, various vols.). The sand-paintings, decorated tablets, and other ornamented ceremonial objects appear to be not merely representations of the desires of the worshippers, or pictures of the gods and their attributes, but many may be regarded as actual pictorial prayers. The Huichol of Mexico also spends a great part of his life at ceremonies and feasts, many of which are for making rain. Very important in the religious life of the Huichols is the use of the *hikuli*, a small cactus known in the south-western United States as 'mescal buttons.' The plant is considered as the votive bowl of the god of fire, who is the principal god of the Huichols, and it has to be procured every year, or there will be no rain. Hence conventional representations of this stimulating, colour-vision-producing plant are placed on ceremonial objects or painted on the face. There are numerous other gods. Religious feeling pervades the thoughts of the Huichol so completely that every bit of decoration he puts on the most trivial of his everyday garments or utensils is a request for some benefit, a prayer for protection against evil, or an expression of adoration of some deity. As Lumholtz says (*Unknown Mexico*, 1903, ii. 204 ff.), the people always carry their prayers and devotional sentiments with them in visible form. Girdles and ribbons, inasmuch as they are considered as rain-serpents, are in themselves prayers for rain and for the results of rain, namely, good crops, health, and life; also the designs on these objects may imitate the markings on the backs of the real reptiles. Of

similar significance are patterns composed of representations of conventionalized or vestigial double water-gourds, or of the fire-steel which represents the great god, or of the toto flower which grows during the wet, corn-producing season, and therefore becomes a prayer as well as a symbol for corn. The eye is the symbol of the power of seeing and understanding unknown things, and 'god's eyes' are commonly combined with other designs in woven patterns, in order that the eye of the god may rest on the wearer (Lumholtz, *Memoirs Am. Mus. Nat. Hist.* iii.). Thus these people are literally clothed in prayers.

LITERATURE.—General subject: H. Balfour, *The Evolution of Decorative Art*, Lond. 1893; A. C. Haddon, *Evolution in Art*, Lond. 1895 (with numerous references); F. Boas, 'The Dec. Art of N. Am. Indians' in *Pop. Sci. Monthly*, Oct. 1903; *Bull. Am. Mus. Nat. Hist.* ix.; 'Prim. Art' in *Am. Mus. Journ.* iv.; Flinders Petrie, *Egyptian Decorative Art*, Lond. 1895. Few of these deal with the relation of religion to art.

A. C. HADDON.

ART (American). — The art of the American Indians, like their architecture, is of many varieties and many grades. The chief forms are weaving, basketry, pottery, carving and sculpture, painting, metallurgy and jewellery, and mosaics, which may be taken up in the order named.

1. **Weaving.** — The art of weaving is found among many North American Indian tribes, particularly in the south and west, although some, such as the Apaches, are unacquainted with it. The material for the loom is very divergent in character. The Menomonis, an Algonquian stock, form their thread from the inner bark of young basswood sprouts, while the southern and south-western tribes use cotton, and the Kwakiutls of the north-west coast employ wool, hair, and even birds' feathers. The fabrics produced by the looms of the Western American Indians are woven with extreme closeness, and the colours are very gaudy, although the blankets for ordinary use are dark blue and white, or black and white, or are even left the natural colour of the wool. The figures, both in the Navaho blankets and in the closely related Hopi work, are frequently elaborate, and the effect is pleasing. It is among these two tribes, indeed, that weaving is best developed in North America. The native colours of the Navahos, who are able to make blankets that are impervious to rain, are red, yellow, and black, but here, as in the Orient, chemical dyes have largely impaired the excellence of native workmanship. Most of the weaving is done by the squaws, who make up their designs, which are largely in angles and straight lines, as they go along, occasionally tracing model patterns in the sand. Considerable symbolism attaches to the designs. The square with four knit corners represents the four quarters of heaven and the four winds, thus corresponding to the use of the *swastika* in America; while the *tau*-cross is a symbol of protection and a prayer to the Great Spirit. A spiral is said to typify the purified soul and a double spiral the struggles of the soul. The colours, in like manner, have a religious significance; so that black is the symbol of water (also indicated by wavy lines), or the female principle, and red the sign of fire, the male element. The Chilkat blankets of the Alaskan coast, woven in elaborate and artistic figures, with a warp of cedar-bark twine and a woof of mountain-goat wool, are also important in this connexion. The designs on these blankets, as might be expected, are very like those on the totem-poles and other carvings of the north-west coast. The natives of the Antilles were also acquainted with weaving, and even made cotton puppets in which the bones of the dead were placed. Among the Aztecs weaving was highly developed, a conspicuous part of the adornment of the warriors being mantles of woven feathers, decorated with the art which was a national characteristic of this marvellous people. The most striking remains of ancient American Indian weaving, however, which even include lace and drawn work, are those preserved in the great Peruvian necropolis of Ancon, near Lima, where the elaboration of the designs and the richness of the colouring surpass all other examples of American textile art (see W. Reiss and A. Strübel, *The Necropolis of Ancon in Peru*, tr. by A. H. Keane, 3 vols., Berlin, 1880–1887).

The general course of development of weaving designs among the Peruvians is thus summarized by Wiener (*Pérou et Bolivie*, p. 636 f.): 'Les étoffes les plus simples ont pour ornements de simples lignes droites parallèles, d'autres des lignes croisées. . . . Cependant ces dessins se développent, le méandre remplace d'abord les lignes croisées, et puis petit à petit nous trouvons la reproduction de fruits, de poissons et d'animaux, pour nous élever finalement à la représentation de l'homme. Cependant les difficultés techniques empêchaient le libre développement de la ligne. La courbe est toujours remplacée par une ligne cent fois brisée et se mouvant suivant des angles droits. C'est ainsi que le crâne devient une pyramide à gradins, que l'œil devient un rhomboïde, le nez un triangle, la bouche un quadrilatère.' Yet, despite the restrictions necessarily imposed on the Peruvian artists, their figures of men, animals, and other objects have a distinct charm, and frequently suggest in many respects the products of the Orient.

Mention should also be made, in connexion with weaving, of the bead-work of the American Indians. The primitive basis of this form of art may well have been pebbles, seeds, nuts, claws, teeth, and similar objects of adornment, which continued to be employed side by side with the more artistic beads. 'Beads of marine or fresh-water shells were made by grinding off the apex, as in the case of dentalium, or the unchanged shells of bivalves were merely perforated near the hinge. Pearls were bored through the middle, and shells were cut into disks, cylinders, spheres, spindles, etc. In places the columellæ of large conchs were removed and pierced through the long diameter for stringing. Bone beads were usually cylinders produced by cutting sections of various lengths from the thigh or other parts of vertebrate skeletons' (Mason, in Hodge, *Handbook of American Indians*, i. 138). Ivory and amber beads were used by the Eskimos, while turquoise was carved into ornaments in the south-west, in Arizona, and in New Mexico. The principal uses of beads were personal adornment, the decoration of vessels and of articles of dress, as insignia of office, as records of intertribal treaties and other important events, and as money. In the last two uses the strings of beads are known as *wampum*. The value of beads naturally varied considerably. Pink shells were especially prized, while in New England dark purple wampum was made from the small round spot in the inside of the quahoy shell. The northern Pacific tribes affected dentalium shells. But here, as in blanket weaving, the invasion of the whites brought modifications, and glass beads and silver coins (the latter particularly among the Navahos) are now extensively worked up into ornaments. Woven beadwork is found among the Sioux, Winnebagoes, Apaches, and other tribes, the Sioux preferring geometric designs, while the Winnebagoes and others are noted for their designs of flowers and animals. Closely akin to beadwork is quillwork, especially among the Plains Indians (now done in its purity by few except the Eskimos, the tribes of the north-west coast, and the northern Athapascans), which, in its turn, is supplemented by featherwork, the latter carried, as already noted, to its highest perfection among the Aztecs.

2. **Basketry.**—Like weaving, basketry is largely the work of women among the American Indians. Its forms are classified by Mason ('Aboriginal American Basketry,' in *Report of the United States National Museum for 1902*, pp. 222–258) into

woven and coiled. The former is subdivided into checker-work, twilled, and wicker-work, wrapped, and twined, the latter further occurring as plain twined, twilled twined, crossed or divided warp with twined work, bird-cage weaving, and various forms of three-strand twining. Coiled basketry included the following: coiled work without foundation, simple interlocking coils with foundation, single-rod foundation, two-rod foundation, rod-and-splint foundation, three-rod foundation, splint foundation, grass-coil foundation, and Fuegian stitches (the buttonhole stitch). The forms of American baskets are equally various, ranging from flat trays, as among the Tulares of Central California or the Hopi food trays, which are little more than woven mats, to the elaborate water jugs of the same Hopis. The baskets are richly adorned with shells, beads, feathers, and the like, as well as coloured with dyes and painting, and interwoven with materials of different colours.

Basketry is used in America for the most varied purposes, as for transportation, cradles (especially on the Pacific coast), armour (as among the Massawomekes of Chesapeake Bay), clothing (particularly the basket hats of the Thlinkets, Haidas, and Hupas of the west coast), preparing and serving food, building (as among the Pomos of north-western California), furniture, trapping, general receptacles, and in burial. Baskets likewise play an important part in the ceremonial of the Hopis, as in the 'basket-dances,' the same tribe also including among its masks some made of basketry. The decoration on North American basketry is reduced by Mason (*op. cit.* p. 295) to the following *motifs*: lines in ornament, squares or rectangles, rhomboidal figures, triangles, polygonal elements, and complex patterns. Here the type of weaving adopted necessarily conditions the general style of decoration, the simplest being that obtained from checker-work, and perhaps the highest being such coiled basketry as that of the Salishans and Tulares. The decoration thus obtained may be heightened by the use of colours and by the addition of feather-work, bead-work, shell-work, and the like. But to convey an idea of the vast variety of design and colour of American Indian basketry without several hundred illustrations would be impossible, and reference can therefore only be made to the monograph of Mason already cited and to the bibliography given by him (*op. cit.* pp. 545–548), as well as to his *Indian Basketry* (2 vols., London, 1905)

Allusion has been made to the fact that basketry is employed in ritual, particularly in the Hopi women's festivals, celebrated in September and October respectively, of Lalakoñti and Owakülti (Fewkes, in *21 RBEW* pp. 22f., 58). Symbolism in American Indian basketry is now confined to the western part of the continent; yet, even among those tribes and stocks which now show merely decorative designs in their basketry, symbolism still exists, 'for with Algonquian, Siouan, Kiowan, the substitutes for basketry, rawhide receptacles, as well as moccasins, cradles, and objects in three dimensions, are covered with idealism in painting and embroidery' (Mason, *op. cit.* p. 318). The chief modern symbolic basket-makers are the Hopis, the Thlinkets (cf. the similar designs on the Chilkat blankets), the Salishans, and the tribes of northern California and southern Oregon. It must be borne in mind, however, that the same design may represent totally different concepts among different tribes, and that the conventionalization is carried to such an extreme that only the makers themselves can truly interpret them, for 'to appreciate symbolism fully one must know the sign, hear the story, and then study the skies, the landscape, and the social environment. To attempt to discover an alphabet in this primitive art would be useless, for each tribe adapts old and new standard forms to its own concept myths' (Mason, p. 315). From the wealth of symbolic baskets allusion may be made to representations of the Corn Maiden (*Palahiko mana*) on Hopi basketry, and to the four birds of the cardinal points on trays of the same marvellous people, as well as to Navaho baskets with four crosses which give a double symbolism of the four cardinal points. Here the colours also are symbolic, and it is interesting to note, in this connexion, that the Pomos of north-western California have, according to J. W. Hudson (quoted from MS. by Mason, *op. cit.* p. 328), the following colour symbolism: red, bravery, pride (personified by the woodpecker); yellow, amatory success, gaiety, fidelity (lark); blue, demoniac cunning, perfidy (jay); green, astuteness, discretion, watchfulness (duck); black, conjugal love, beauty (quail); and white, riches, generosity (wampum). The *swastika* and labyrinth *motifs* are also found.

The relative perishability of basketry is obvious; and it is equally evident that its use was far more wide-spread in America than the extant remains would imply. It existed, for example, among the Pequots of Connecticut and the tribes of Virginia; fragments are found in the mounds of Ohio; and the means of re-constructing its designs in the Mississippi valley will be noted in the following section. Baskets were likewise known, according to the early explorers, among the Antilleans, some of them so interwoven with leaves as to be waterproof. Not only were baskets used in many religious ceremonies, but, like the Orinoco tribes, the Antilleans often preserved the skulls of the dead in baskets made specially for the purpose.

Throughout South America basketry is found. Thus, the Indians of Guiana make excellent baskets, which they adorn, as in North America, with geometrical figures. Along the Amazon the baskets receive their ornamentation primarily from the rectangles formed in weaving—another interesting proof of the influence of the older on the younger art. These designs, it should be noted, are extended to painting and drawing, and are apparent even in the drawings of men, fish, and birds made by the Indians of this region (Schmidt, *Indianerstudien in Zentralbrasilien*, Berlin, 1905, pp. 330–418), while some of the wooden masks of the Amazonian Indians have in their ornamentation obvious analogues with the more primitive woven masks. Of Peruvian basketry many specimens are known, particularly from the great necropolises, but they present scarcely any features not already known from North America.

3. Pottery.—The first utensil for holding water, grains, etc., at least in some cases, was the gourd, which was often slung in basketry for convenience, or reinforced with reeds or grasses, later still with earth or clay. It is not impossible that when these clay-covered gourds were left in the sun, the gourds were found to crack, while the clay became hardened. For a time pottery was accordingly made by covering gourds and basketry with clay, the former being destroyed by heat, and the latter retaining, in its hardened form, its original shape and the markings of its former mould. Still later, the mould was no longer used, since clay containing sand or particles of shell could easily be formed into the familiar shapes, and then be baked to the requisite firmness. It is significant, in this connexion, that the Navahos still term earthenware pots *kle-it-tsa*, or 'mud baskets,' thus recognizing the fact that American pottery is a direct development of basketry. In the further course of development, resinous gums were put on the

clay vessels while still hot, thus forming a glaze which enabled the otherwise porous receptacles to hold liquids. As pottery gradually evolved, moulds were dug in the ground, and clay ovens were constructed in the hill-sides. The coiled basketry, noted above, also finds its application in pottery, as among the Hopis, who both coil ropes of damp clay around a wicker nucleus and construct similar vessels by freehand modelling. It has already been stated that basketry was more wide-spread in America than the extant remains would indicate, and proof of this is afforded by many specimens of the pottery of the Mississippi valley, where casts taken of the clay vessels reveal the pattern of the basket shell on which they were constructed. There is, however, no decisive evidence that the potter's wheel was known in aboriginal America.

Pottery was primarily used for storing, cooking, and transporting food and water, later being used in religious ceremonial, and formed into various fancy figures, as masks, gaming implements, and even toys. Burial urns are also found in the Mississippi valley, and clay pipes are common, particularly among the Iroquois. In general, it may be said that the pottery of North America decreases steadily, in both quality and quantity, as one goes toward the north, until among the Eskimos it is represented only by lamps of the rudest description. The farther south one proceeds, on the other hand, the more abundant and excellent the pottery becomes, thus further exemplifying the fact that the peoples of Mexico, Yucatan, and Peru stood at the acme of all pre-Columbian American civilization. Pottery is a characteristic, moreover, of a sedentary people, and would thus find less use among the comparatively nomadic stocks and tribes of the northern parts of the American continent.

The shapes of the pottery of North America are numerous and, in many cases, artistic. Vases, dishes, and cups occur with especial frequency, either plain or with handles, the vases being both completely open and partially covered at the top. Bottles have also been found, as in Arkansas, and early writers on America relate that they saw earthenware drums in use, these being now represented in part by the earthenware rattles used in the ritual, as by the Pueblo tribes. At least one case of earthenware burial-caskets is known from Tennessee, and funeral jars with obvious death-masks are not uncommon in the Mississippi valley. The anthropological value of the latter form of pottery needs no comment. Frequent and most interesting forms of pottery are the figurines of fish, turtles, birds, and animals. It is noteworthy that these figurines are restricted to Pueblo Indians, who, indeed, represent the zenith of American pottery north of Mexico. It would be impossible within reasonable limits to give any detailed account of the forms of either construction or decoration of American pottery, whether in the northern or the southern continent. In the most primitive specimens of North American pottery there were merely the marks of the wicker mould. The early ornament of the coiled clay vessels was, as might be expected from their form and model of construction (see above), a direct imitation of the patterns of the basketwork vessels. With further progress the impress made by the fingers of the designer gradually came to have regular modifications, which resulted in producing artistic patterns of more or less regularity. The rope coils, at first pinched involuntarily, were later purposely thus modified into regular designs, a Pueblo pot, for example, having the pinch marks so obliterated as to leave rows of triangles attached to each other at the corners. Various tools were likewise employed, pointed ones for incising and gouges for scraping, as well as many varieties of stamps for impressing designs upon the clay before baking. Examples of fictile ware have been found, especially in Arkansas, engraved, after being burned first, with designs of true artistic merit.

The most common mode of decorating pottery, however, was to give the vessel a wash of fine clay, which was painted in various colours and designs, as well as polished, before the pottery was finally burnt. This was particularly the case among the Pueblo and Arkansas Indians. There is a wide range of colour, especially white, black, red, brown, yellow, and green. The designs are so numerous as scarcely to admit of classification; but as the material of baskets led most easily to the production of right-angled decoration, so in the pottery circles and curves form a prominent feature. At the same time, angular designs are not uncommon, doubtless derived from basket patterns; and both angular and curved decorations appear with great frequency on one and the same specimen. While many of the patterns are purely ornamental, and while representations of birds and animals seem, at least in many cases, to be simply decorative, other figures on Pueblo pottery possessed religious symbolism. The three 'lines of life' occur, for instance, on a food bowl from Chevlon, which site also shows raincloud symbols on another bowl. The raincloud symbol, indeed, is well-nigh as important on Pueblo pottery as in the ritual of the Hopis and kindred tribes. The chief raincloud symbols in the modern Hopi ritual are the rectangle (usually appearing as a stepped triad), the semicircle (also usually in triads), and the triangle. These and similar symbols occur frequently in ancient Pueblo pottery, as on a food bowl from Four-mile Ruin; and on another bowl from Homolobi the *swastika* (typifying the four cardinal points), on a red ground, is surrounded by a slate-coloured margin, each arm of the *swastika* pointing to straight red lines representing rain, and the intervening sub-quarters being occupied by three wavy red lines each. These few examples may serve to indicate the wealth of symbolism which may be traced on Pueblo pottery. Nor must it be forgotten that many designs which at first blush seem merely decorative are in reality fraught with deep religious symbolism. Here, in connexion with the pictures of birds and other living creatures, the investigator will do well to bear in mind the words of Fewkes: 'In all these representations of mythical animals the imagination had full sway. It was not the bird with which the artist was familiar through observation, but a monstrous creation of fancy, distorted by imaginations—real only in legends—that the potter painted on the vessels. Hence, we cannot hope to identify them, unless we are familiar with the mythology of the painters, much of which has perished. The comparatively large number of birds on the ancient pottery indicates a rich pantheon of bird gods, and it is instructive to note, in passing, that personations of birds play important parts in the modern ceremonies which have been introduced into Tusayan from the south' (*22 RBEW*, pt. 1, p. 146 f.).

Numerous specimens of pottery have also been found in Porto Rico, Santo Domingo, St. Kitts, Grenada, Trinidad, etc. This is, in general, coarse, unpainted, and rude. The most usual decorations are incised lines or relief figures, the former being preferably lines (especially parallels), triangles, spirals (rare), and circles. There are no traces of either painting or slip. The pottery of Porto Rico and Santo Domingo is distinctly characterized by an indentation of the extremity of each line in rectilinear decoration by 'a shallow pit that

was apparently made with the same instrument as the line itself; or it was sometimes slightly separated from the end of the line' (Fewkes, in *25 RBEW* p. 180). Pottery from St. Kitts, on the other hand, shows red ware with a fine superficial polish and incised lines filled with white pigment.

The art of painting pottery is also known among the South American Indians of the central Amazon and Guiana, the latter tribes adorning their pottery with juices extracted from the bark of various trees, thus making crude designs of animals or geometric figures in red, brown, black, and other colours.

North of the Isthmus of Panama pottery was carried to its highest development among the Aztecs, Zapotecs, Mayas, and kindred peoples. There not only vessels of various exquisite shapes and of a noteworthy degree of finish were made, but also elaborate funeral jars and water-pipes, and life-size figures of terra-cotta. Some of the Zapotec funeral urns are 20 inches in height, and are fashioned in the conventional forms of the sculpture of this region—a feat all the more difficult when the material used for the modelling is borne in mind. In South America the most elaborate fictile ware is found in Peru. Dishes and vases of all shapes, some of them of great intricacy of design and decoration, are found in large numbers. The forms of various fruits, animals, birds, reptiles, and fishes are represented with much fidelity, and clay vessels in human shape abound. The most important of the latter class are those which represent the head only; and while many are evidently conventional, others are plainly intended for portraits, and are thus valuable for a study of ancient Peruvian physiognomy. Groups were also represented; and fidelity to nature, which was the aim of the ancient potters of Peru, was increased by making some of their vessels a kind of mechanical toy, which could give a sound imitating the cry of the animal or bird represented, similar figurines also being found in Central, and even in North, America. A noteworthy form of Peruvian pottery was the water-jar, an article of prime importance in so arid a country. One of the chief forms is the twin bottle; and it has been suggested that one reason for the intricate shape of many Peruvian jars was the desire to prevent insects, etc., from finding their way into the interior. The pottery was often painted or engraved just as it was drying, after the clay itself had first been mixed with powdered ashes, carbon, or graphite, while in more common ware chopped straw was also employed. The decoration was, for the most part, purely conventional, although important exceptions are not lacking. The symbolism, which may well have existed, is not as yet worked out.

4. Carving and sculpture.—The carving and sculpture of the American Indians are still more limited than pottery in territory. This is but natural, in consideration of the fact that wood and stone are far less tractable substances than the clay of the potters. Excepting on the north-west coast, sculptured figures are rare, although a few rough heads have been found as far east as New Jersey. Among the so-called 'mound-builders' the tobacco-pipe attains a considerable degree of artistic development, and among the Eskimos rude carvings on ivory, copied in the scrimshaws of the whalers, frequently represent the forms of animals and other objects with remarkable fidelity. In the Mississippi valley carved shell gorgets have been discovered, which, in some cases, are curiously similar to Aztec work. Rude shell masks are also found, some as far east as Virginia. The most important specimens of North American Indian carving, however, are found among the tribes of the north-west coast, such as the Haidas, Thlinkets, and Kwakiutls, who are also skilful engravers on slate and metal. The totem-poles of these tribes are most elaborate, and are sometimes covered almost to their full height, which frequently reaches 50 feet, with representations of totemistic animals, birds, or fish. In addition to the totem-poles, the posts of the houses on the north-west coast are also elaborately carved, and both they and the totem-poles are gaudily painted in red, yellow, black, and other primary colours. Here, too, belong the wooden masks of the same tribes, which, like the totem-poles and the carved posts supporting the main rafter of the house, have religious significance, and suggest in design the basketry of the region and the Chilkat blankets. The Haida canoes are also elaborated, carved, and decorated with totemistic and other religious designs. The Pueblo Indians, so advanced in other respects, were singularly deficient in carving and sculpture, and there is a wide extent of territory from the Haidas to the Aztecs (except for a few stone whale-killer figurines among the Santa Barbara Indians of the southern California coast) before any real examples of these arts are found. It is only among the Aztecs, Toltecs, Zapotecs, and Mayas, moreover, that any carving or sculpture is found actually to be artistic. The elaboration of the Aztec calendar stone and of the sculptures of Palenque, Chiriqui, and Copan are unsurpassed in any part of the American continent, being far superior even to Peruvian art. Individualistic statues, likewise, occur in these regions, and the walls of temples are elaborately sculptured. The close connexion between sculpture and painting is exemplified in the resemblance of the carved figures to the pictures in Aztec and Maya manuscripts. Carving in wood was known in ancient Mexico, but naturally few examples of it have survived. Large stone figures are found from Mexico to Nicaragua, terminating, towards the south, in the idols of Zapatero and Pensacola and elsewhere, some of them 12 ft. high. They are, however, rude in structure, and far inferior to the polished productions of the Mayas. The archæological remains of Porto Rico and the neighbouring islands, which have become known from the researches of Jesse W. Fewkes in 1902–1904 (contained in his 'The Aborigines of Porto Rico and Neighboring Islands,' in *25 RBEW* pp. 3–220), give some striking contributions to American art from a region hitherto imperfectly explored. The remains are rude artistically, yet they serve to supplement our knowledge of the Orinoco tribes, with which he justly holds Antillean civilization to be connected. Here mention may first be made of stone pestles, chiefly from Santo Domingo, adorned with rude heads and figures of animals, birds, and men, the type being unlike any found in any other part of America. Besides objects more or less familiar elsewhere, such as beads, pendants, stone balls (perhaps used as roof-weights or fetishes), small stone heads and discs with human faces, stools (recalling the forms in South America), pillar stones (generally with rough and grotesque attempts to represent the human form), and rude wooden idols (some possibly imported by the Spaniards from Africa for the negro slaves), there are three classes of sculpture which are apparently peculiar to this region. These are three-pointed stones (either plain or with faces of birds, beasts, reptiles, or men, restricted thus far to Porto Rico and the eastern end of Santo Domingo), stone 'collars,' and 'elbow stones.' The first are regarded by Fewkes (*op. cit.* p. 131) 'as clan idols or images of tutelary totems,' fastened to some unknown object; and the third class may have been connected with the 'collars' (*op. cit.* pp. 172–174). There thus remain the 'collars,' which are either massive ovals or slender ovates, and either partially decorated or plain.

Their use is entirely problematical (cf. Fewkes, *op. cit.* pp. 167–172); but similar objects have been found in Totonac ruins in eastern Mexico. They are accordingly held by Fewkes (*25 RBEW* pp. 251–261) to be connected with the Aztec 'sacrificial yokes,' which he seems inclined to regard as fertility symbols (cf. the more conventional view advanced, perhaps incorrectly, by the present writer in art. ALTAR [American], above, p. 336). At all events, the problem of the real meaning of these 'collars,' which measure as high as 19 by 17 in., can as yet scarcely be said to be solved.

Turning to South America, one finds rough carvings on trees among the Indians of Central Brazil, while their chairs are made in the shape of birds, and they have vessels in the form of various birds, bats, fishes, and tortoises. On the Chaco, on the other hand, art consists only in scratching natural objects roughly on gourds and making rude topographical scenes (Grubb, *Among the Indians of the Paraguayan Chaco*, London, 1904, p. 98). Among the most remarkable sculptures, if such they may be called, of the South American Indians are those of the natives of Guiana. One of the most typical of these is on Temehri Rock in the Corentyn river, and measures 13 feet in length by 5 feet 7 inches in width. The carving represents a number of figures of men, monkeys, snakes, and the like, and also has simple combinations of two or three curved lines. The figures are in all cases extremely rude, and those of less importance are sometimes painted instead of carved. Some of these carvings are of comparatively recent date, for one at Ihla de Pedra in the Rio Negro represents a Spanish galley (cf. Im Thurn, *Among the Indians of Guiana*, London, 1883, pp. 391–410). The sculptures of the ancient Peruvians, although naturally superior to any others of the South American continent, were, as already noted, far inferior to the work of the Aztecs and their neighbours. Expert cyclopean architects though they were, they were but indifferent sculptors, and even the few specimens of wood carving which are still extant are but rough work. Like the Central Brazilian Indians, the Peruvians paid considerable attention to their chairs, and specimens have been preserved which are supported by figures of some artistic merit. Chairs of similar form are also found in Nicaragua and Porto Rico. A few admirable granite heads have been found, as at Pashash; and the fountain of Quonnacha is, at least at first sight, a remarkable work of art. Nevertheless, the rudeness of the head of a porphyry idol, now at Collo-Collo, and the shapelessness of the granite statues of Tiahuanaco, when contrasted with the Maya sculptures of Copan, bespeak most clearly the inferiority of the Peruvians in this form of art. The elaborate sculptures on the buildings, moreover, are far less frequent than among the Aztecs and their congeners.

5. Painting.—This art, at least in its crude forms, doubtless prevailed through most of the North American continent; but the best modern examples are to be found among the Indians of the West. The tribes of the north-west coast, where, as just noted, carving in wood is relatively highly developed, paint their totem-poles, canoes, chests, batons, and other objects in gaudy colours, while the Hopis and other Pueblo peoples are also acquainted with this art, as is shown by the masks, often of leather or basketry, and garments used in the personations of the gods in the great winter festivals. In like manner, much of the pottery discovered in the 'cliff-dwellings' is painted, frequently in conventional designs of pleasing effect and with the general systems of symbolism noted above (p. 829[b]). Among the Aztecs and related peoples the manuscripts still extant are painted with considerable skill, but with the high colouring characteristic of so much of early art. As if to atone for their somewhat curious deficiency in painting, however, the inhabitants of ancient Mexico were noteworthy for their skill in making pictures of trees and flowers, and even copies of European paintings, in mosaics of feathers, with a degree of excellence which aroused the admiration of the Spanish invaders (see above, § 1; and cf. Mason, in Hodge, *Handbook of American Indians*, i. 455 f., and the bibliography there given). The Peruvians also possessed the art of painting; but among them, as among the Aztecs, it was undeveloped as compared with their achievements in other departments of art. Their representations of the human form, however, as is clear from their vase-paintings, were far superior to those of the Aztecs, and the same statement holds true in general with regard to all ancient Peruvian painting. The problem of symbolism here, as elsewhere throughout America, must be solved together with the interpretation of the pottery, basketry, and kindred arts. Outside the empire of the Incas painting seems scarcely to occur in South America. It must be borne in mind, however, that painting is pre-eminently a sessile art, and one which requires a considerable degree of civilization before it can be acquired with any measure of real merit. It is less utilitarian even than carving and sculpture, and arises at a later period, while it is still more tardy in development as compared with weaving, basketry, and pottery, and for a like reason.

Certain special forms of painting among the American Indians call for notice in this connexion. Of these the first is 'dry-painting,' which is practised especially by the Navahos, Apaches, and the Pueblo tribes of Arizona and New Mexico, and in ruder form by the Cheyennes, Arapahos, and Siksikas. These paintings are used exclusively in religious ceremonies, as in the Hopi altars (see ALTAR [American], p. 336), and seem to be most highly developed among the Navahos. Here the paintings are sometimes 10 or 12 ft. in diameter, and are, of course, filled with symbolism representing deities, natural phenomena, and living beings of sacred import. The sand is laid to a depth of 2 or 3 in., and the colours are white, yellow, red (these made of powdered sandstone), blue (really grey, being a mixture of black and white sand), and black (pulverized charcoal). Working generally from the centre and according to the plan prescribed by the ritual (except in a few definite cases), the artist, in applying the pigments, 'picks up a small quantity between his first and second fingers and his opposed thumb and allows it to flow slowly as he moves his hand. . . . When he makes a mistake he does not brush away the coloured powder, but obliterates it by pouring sand on it, then draws the correct design on the new surface. . . . When it is finished, ceremonies are performed over it, and then with song and ceremony it is obliterated. When no semblance of it remains, the sand of which it was made is gathered in blankets and thrown away at a distance from the lodge. In the ceremonies of the Pueblo Indians a picture is allowed to remain several days' (Matthews, in Hodge, *Handbook of American Indians*, i. 403 f.). The Hopis, unlike the Navahos, begin their dry-paintings at the periphery, commencing with the north; and when the painting is effaced, pinches of the sand used in its composition are deposited in certain spots prescribed by the ritual.

A sort of heraldry was perpetuated by means of painting, particularly among the Plains Indians. This applied especially to the *tipis* and shields,

and involved certain tabus, while the basis of the design was drawn from the visions obtained by the young braves (cf. COMMUNION WITH DEITY [American Indian]). As in many other lands, the painting of the face and body was and is common among the American Indians. This may be purely decorative in intent, or it may have symbolism relating to religion, war, or social status. Thus, the Mandans often painted their bodies reddish brown and drew red or black figures on their arms, while their faces were coloured vermilion or yellow. These designs, being merely ornamental, might be varied at pleasure; but the transition from the ornamental is shown by the practice of the same tribe of painting the entire face jet black after performing an exploit (Maximilian von Wied-Neuwied, *Travels in the Interior of North America*, London, 1843, pp. 340–386). Hearndon (*Exploration of the Valley of the Amazon*, Washington, 1853, i. 201) describes a Conibo dandy as 'painted with a broad stripe of red under each eye; three narrow stripes of blue were carried from one ear, across the upper lip to the other—the two lower stripes plain, and the upper one bordered with figures. The whole of the lower jaw and chin were painted with a blue chain-work of figures.' Ritualistic face-painting is exemplified among the White Earth Ojibwas of Minnesota, the first degree of their Ghost Society being indicated, according to Hoffmann (*American Anthropologist*, 1888, pp. 209–229), by a red stripe across the face from near the ears over the tip of the nose; the second by a similar stripe plus another across the eyes, temples, and root of the nose; the third by painting the upper half of the face green and the lower half red; and the fourth by painting the forehead and the left cheek green and impressing four vermilion spots on the brow and four on the cheek. The 'war paint' of the American Indians is, in general, either red or black, or a combination of both; and the same colours are frequently used for mourning (cf., in general, on American Indian face-painting, Mallery, in *10 RBEW* pp. 619–634).

Allusion should also be made to the pictographs which are scattered over North, Central, and South America. Since these are in great part mnemonic, chronological, or historical in purpose, or are intended to convey messages, notices, and the like, they will more properly be discussed under the head of WRITING (American Indian). Here, however, it may be noted that the artistic powers evinced in these pictographs (which are mainly petroglyphs) are decidedly primitive. Their interpretation, when they are not mere ornaments or idle *graffiti*, is often problematical, and requires, in many cases, a knowledge of traditions, local surroundings, and the like. An important class of pictographs is given in the representations of tribal designations (cf. the list in Mallery, *10 RBEW* pp. 377–388; and see in general on the subject his 'Pictographs of the North American Indians' in *4 RBEW* pp. 13–256, and 'Picture-Writing of the American Indians,' in *10 RBEW* pp. 25–822; supplemented for Porto Rico by Fewkes, in *25 RBEW* pp. 148–159). They likewise symbolize personal names (Mallery, in *10 RBEW* pp. 442–460), and religious symbolism is also prominent, being found not only in the Micmac pictographs from Kejimkoojik Lake, Nova Scotia, but also among the Ojibwas, Menomonis, Dakotas, and Haidas (Mallery, pp. 461–512). More than this, there are well defined pictographic signs for the *swastika*, the sky, the heavenly bodies, day and night, lightning, eclipses, and meteors, and representations of *tipis* and even *pueblos* are also found (Mallery, pp. 694–735). The older American pictographs are naturally on stone and uncoloured; but bone, skin, gourds, copper, wood, and textiles also bear like figures, frequently in colours.

6. Metallurgy and jewellery.—The Indians of North and Central America were acquainted with copper, silver, gold, iron, galena, lead, and tin, knowledge of the last two being restricted to the Aztecs, Toltecs, and Mayas. Nevertheless, the use of metal in personal adornment was comparatively rare in North America, shells, beads, and the like being used instead, although bracelets of copper were frequently worn and were highly valued, in view of the difficulty of mining the metal in pre-Columbian days. The metals were worked chiefly by cold-hammering and grinding, but there is no evidence of a knowledge of casting. Silver is now worked with considerable elaboration among the Navahos, and bells of copper have been found in Tennessee, while elaborate sheet copper *repoussé* figures occur in the Etowah mounds, Georgia, and the Hopewell mounds, Ohio; and the copper 'tokens' of the north-west coast are famous in many ceremonies. The Aztecs and other Mexican peoples were expert metallurgists, and their gold vessels and adornments were the marvel of their conquerors.* They imitated the forms of animals and birds, and manufactured personal jewellery, often enhanced in beauty by gems. They likewise possessed the art of making an amalgam of copper and tin, thus forming a bronze of considerable hardness, while specimens of copper plating are known from the mounds of Florida, Alabama, and Ohio. Gold ornaments are also known from Florida and the West Indies. The metallurgical remains of the Peruvians include silver bracelets and collars; gold, silver, copper, and bronze vases; and animals and birds, such as jaguars, deer, monkeys, and parrots, in copper, bronze, and silver, as well as human figures. Apart from this, however, South America falls behind the northern continent in the amount and excellence of metallurgical products and jewellery, as it does in nearly all other requisites and tokens of human progress in civilization.

7. Mosaics and minor arts.—The art of making mosaics was known especially in the Pueblo regions of Arizona and New Mexico and among the Aztecs. The modern products of the former region are much inferior to the ancient specimens, 'which consist of gorgets, ear pendants, and other objects. . . . Turquoise was the favourite material, but bits of shell and various bright-coloured stones were also employed. The foundation form was of shell, wood, bone, and jet and other stone, and the matrix of gum or asphaltum. Although the work is neatly executed, the forms are simple and the designs not elaborate' (Holmes, in Hodge, *Handbook of American Indians*, i. 947). Rude mosaics have been found in graves in southern California. One of the most interesting mosaic objects north of Mexico is a shell used as a pendant and found by Fewkes at Chaves Pass, Arizona, in 1896. This is a frog formed by imbedding turquoises in pitch on the shell of a *Petunculus giganteus*, with a small rectangle of red jasper set in the centre of the back (cf. Fewkes, in *22 RBEW*, pt. 1, p. 86f.). Mosaics from Mexico have long been known, particularly a knife with a blade of semi-translucent chalcedony, the handle being a crouching man, clothed in an eagle's skin, his head issuing from the beak (cf. Bancroft, *Native Races*, iv. 557–559). Of these mosaics some twenty-three are thus far known; and for comparison with the Chaves Pass frog, allusion may be made to a

* The gold was an alloy of copper, varying from almost pure gold to almost pure copper. When the baser metal was used, it was frequently coated (plated?) with pure gold. The technical processes used were exceedingly skilful, but what they were is uncertain.

double jaguar now in the Berlin Museum für Völkerkunde. This is described by Lehmann (in *XV^e Congrès international des Américanistes*, Quebec, 1907, ii. 340–344) as follows:—The figure is carved of tough reddish brown wood, 32 cm. long and 10 cm. high at the head at each end, one of which is turned towards the spectator and the other averted. The belly, which has no mosaic work, is painted with black and bluish green. The bed for the mosaics is a dark brown resin 3 or 4 mm. deep, and the stones themselves are chiefly green or greenish-yellow turquoise and blue malachite, their shapes varying between polyhedrous, rectangular, and round, and all carefully polished. The neck and the extremities are almost covered with turquoises, and rosettes of the same material are evidently intended to represent the jaguar's spots. Rows of turquoise alternate with rows of obsidian on the body, and the ornamentation is enhanced by mother-of-pearl and bits of white, yellow, red, and violet mussel-shells. It would also seem that the eyes and nose were originally covered in part with gold-leaf (see in general on Mexican mosaics, *Globus*, 1906, pp. 318–322).

The account thus given of American Indian art, like that of the architecture of the same peoples, cannot pretend to be exhaustive. Besides the large categories here outlined, there were other arts, such as bark-work. This was used for cord, mats, receptacles of all kinds, dishes, canoes, and houses; for cradles and for burial; for clothing and for writing-tablets; and for religious dance regalia and masks (cf. Mason, in Hodge, *Handbook of American Indians*, i. 130–132, and the literature there cited). Among the more northern tribes and along the Pacific coast bone is almost as important as bark, being used not only for personal adornment and as household utensils, toys, and fetishes, but even for weapons and in the construction of dwellings, canoes, and the like. Bones were elaborately carved, and were also inlaid by the ancient Pueblo Indians, while even a copper-plated bone has been found in a Florida mound (cf. the summary of Holmes, in Hodge, i. 159 f.). Horn was likewise sometimes employed, as for dishes among the Salishan tribes.

(Washington, 1907); Bancroft, *Native Races of the Pacific States*, iv. (San Francisco, 1883); Kingsborough, *Antiquities of Mexico* (9 vols., London, 1830–1848); Maudsley, 'Archæology' in *Biologia Centrali-Americana* (London, 1899–1901); Wiener, *Pérou et Bolivie* (Paris, 1880); Baessler, *Ancient Peruvian Art* (Eng. tr. by Keane, 4 vols., Berlin, 1902–1903); von den Steinen, *Unter den Naturvölkern Zentral-Brasiliens* (Berlin, 1894); Waitz, *Anthropologie der Naturvölker*, iii. (2 parts, Leipzig, 1862–1864); and many monographs in the reports of the American *BE*, the United States National Museum, the Field Columbian Museum, the Peabody Museum, and the American Museum of Natural History. The present writer's thanks are also due Mr. F. D. Van Arsdale of Newark, N.J., for private information, especially concerning pottery.

LOUIS H. GRAY.

ART (Assyro-Babylonian).—The religion of the Babylonians and Assyrians, which, according to the received opinion, was animistic in its origin, may be regarded as going back to between 4000 and 5000 years B.C. This long period, added to the nature of their faith, has supplied us with an enormous amount of material illustrating their religious art, which the student can trace, in all its variant styles, through the ages of its existence, noting the changes in religious thought which it reflects, and the reaction of its influence on the people themselves.

Before B.C. 4500 (as far as is at present known) no monuments exist, so that there is practically no record of that animistic period in which the religion of the Babylonians had its origin. A wide gulf must therefore exist between the religious conceptions of the simple-minded savages of early Sumerian and Semitic times and those of the men of even the remotest civilization of Babylonia when works of art are found.

Babylonian religious art therefore comes before us only when it had attained a certain measure of perfection. It is true that a number of comparatively rude examples have come down to us, but such are a speciality of no particular age, and at all periods excellent examples, principally in stone, exist, among them being numerous engraved seals, mostly cylindrical. Many good bronzes, too, have been found, some of them being as early as the 3rd millennium B.C.

In all probability the art of Babylonia is best divided into periods, though the schools of the various States (Ur, Erech, Akkad, Babylon, Lagaš, etc.) could also be taken into account if we had sufficient material. With our present knowledge, however, it is often difficult to place the examples, and even the question of date is not without its difficulties, as the chronology does not admit of a clear line of demarcation in the matter. The divisions, therefore, can be only roughly determined, somewhat as follows:

1. Babylonia.
(1) From the earliest period until the time of the Dynasty of Babylon (*c.* 2000 B.C.—Lagaš, Niffer).
(2) Until the end of the dynasty of the Land of the Sea (*c.* 1700 B.C.—Babylon, Sippar, Erech).
(3) The Kassite period (*c.* 1700 B.C.—*c.* 1100 B.C.).
(4) From *c.* 1100 B.C. until the downfall of the Babylonian empire (B.C. 538).
2. Assyria.
The artistic period may be regarded as extending from the 9th cent. or earlier (we await the results of the German excavations at Aššur) until about B.C. 606.

Though, like the art of Egypt, that of Babylonia comes before us only when it had attained a certain amount of perfection, it is, in a way, more interesting than that of Egypt, in that it shows a much greater variety of styles; and the Assyrian school, when it comes into existence, has a distinct stamp of its own. We have also to distinguish, besides the perfect and artistic, the amateurish (which is sufficiently rare) and the rough and unfinished—generally cylinder-seals 'dashed off' by the hand of one accustomed to do such work, and probably to be regarded as cheap productions for the poorer classes, who naturally needed things similar to those required by the well-to-do, though they could not pay the price. At all times these classes of religious artistic productions had existed, and among the perfect and artistic are now and then to be found things of noteworthy beauty of workmanship, due, doubtless, to the presence of artist-workmen of wonderful talent.

1. **Babylonia.**—(1) Among the best of *the earliest examples* of Babylonian religious art are the very interesting cylinder-seals impressed upon tablets found at Tel-loh (Lagaš) in S. Babylonia. They show a man and a woman, nude, the former struggling with a stag, and the latter with a bull, whilst two lions, whose bodies cross each other symmetrically (a common device of Assyro-Babylonian engravers) attack the two animals at the same time. Various mystic emblems appear—a bat or bat-headed bird, an animal's fetlock and hoof in outline, and a young bull—whilst beneath the name of the owner are two bull-men whose bodies cross each other, as in the case of the lions. The wide-open mouth of the man, and the closed mouth and the large ear of the woman, suggest that we may have here primitive representations of the deities Nebo, 'the proclaimer,' and Tašmêtu, his spouse, 'the hearer'; but the crown with points which the woman wears is rather against this identification, on account of analogies elsewhere. Concerning the art here revealed, a few words may be said. The

animal-forms, especially the heads, are good, and the manes of the lions are well treated, but the human forms are less satisfactory, the body of the man being thick, and the arms in both cases abnormally thin. The head of the man regards the spectator, and, though too large, is more successful than that of the woman, which has the same defect, to which must be added the fronting eye in the profile face, fitting, as it were, into the somewhat pointed nose, which makes the figure grotesque. The close-shut mouth (the line of the lips is invisible in the impression) and the abnormally large ear, taken in conjunction with the wide-open mouth of the man, shows that the design has a deeper meaning than appears at first sight. This seal belonged to En-gal-gala, the superintendent of the women's house during the reigns of Lugalanda and Uru-ka-gina, about B.C. 4500.*

Scenes similar to this are common, though no woman is shown as one of those struggling with the animals. From the same site, Tel-loh, the de Sarzec expedition † obtained a very fine seal showing a bearded man struggling with a bull, and a bearded and crowned personage struggling with a lion. These animals cross each other like the lions in the other design, and the bull-men beneath the inscription of En-gal-gala's cylinder are replaced by two human-headed bulls, one of which is held by a nude bearded man, a bird, probably intended for an eagle, occupying the space between them. If the short inscription *Nin-in* or *Ni-in*, close to the crowned personage, refers to him, it probably represents the ancient deified king Ninus, who, with Semiramis, is said by Diodorus (ii. 8, 6) to have been represented on the walls of Babylon in enamelled brick, hunting the leopard and the lion.‡ The objects here described suggest that there was not only a legend referring to the goddess Nina, patron of Nina on the Euphrates and of Nineveh in Assyria, but also a male deity of similar name. Semitic influence, with its veneration for the male, is probably the cause of the substitution of the male deity for the hearing but silent female.

The occurrence of these early designs on cylinder-seals reminds us of an important fact in connexion with Babylonian art, namely, that in Babylonia there is neither building-stone nor even blocks in any number suitable for sculpture either in relief or in the round. It is therefore not impossible that the earliest works of art were primitive attempts at engraving, first as charms, and afterwards as charms and seals combined, on the cylindrical beads which were for many centuries the favourite form of seal in Babylonia and Assyria, and which afterwards travelled to the extreme west of Asia and Egypt.

Presenting a large surface in a small space, these cylinder-seals became suitable for all kinds of pictures, and we find engraved thereon the Babylonian idea of several of the legends with which we have become familiar from the tablets. Thus it happens that, in a scene showing a nude bearded figure struggling with a bull which is being also attacked by a lion, we see a representation of a boat and a personage within rowing,§ which is generally supposed to show the Babylonian Noah in the ark. Several copies exist also of that exceedingly interesting scene which shows Etanna riding in the air upon an eagle, whilst people on the earth below interrupt their daily work to gaze upon them.* Another noteworthy example is well known as a possible Babylonian picture of the Fall. It shows two personages seated one on each side of a palm-tree bearing fruit, and stretching forth their hands as if about to grasp it, whilst behind the figure apparently representing the woman a wavy serpent raises himself. The work is rough, but implies some technical skill.†

Noteworthy are the early engravers' attempts to cope with the scene representing the overthrow of the dragon Tiamat by Merodach. The best is one figured by Hayes Ward, in which the head of the Babylonian pantheon is seen striding or running along Tiamat's wavy body, and thrusting his weapon into her mouth as she turns her horned head towards him. Two of Merodach's helpers seem to follow behind. Another picture of the same, which is apparently of late date and Assyrian workmanship, shows the dragon with a long and straight, but apparently scaly, body, erecting herself at an angle where the feet spring forth. She does not turn her head towards him, and the god attacks her with thunderbolts, striding along on her body behind, followed by two of his helpers.‡ Other scenes, possibly from legends, occur, but have not as yet been identified. Thus a cylinder-seal in two divisions shows, on the right, a deity (the sun-god) dividing food, of which the owner of the seal, standing before him, seems to partake; and on the left another deity bending down a tall thin tree apparently to conceal a goddess and a (? child-) deity coming forth from its trunk (cf. the classical story of Adonis [Ovid, *Metam.* x.]). All the figures on this cylinder-seal (except that of the owner) wear the horned hat indicating divinity.§

The design in the right-hand division, which shows the owner of the cylinder before the god whom he worshipped, is probably, in its various forms, the commonest found, especially in the period preceding 2000 B.C. The deity is generally seated, and often holds a cup in his right hand. Before him is sometimes a vase, and the worshipper (the owner of the seal) is led into his presence by a divine personage.‖ A divine attendant sometimes brings up the rear.¶ The worshipper is generally bare-headed and clean-shaven, the latter peculiarity probably indicating his priestly office.** Variants of this oft-repeated design are found; one, which is regarded as exceedingly ancient, is a fragment of a bas-relief †† showing a seated deity holding a cup in his right hand, and wearing on his head a hat with two horns, one at the front and the other at the back, instead of one or more on each side, as in the later designs. The work is rough and primitive, the artist having apparently found his material not altogether satisfactory (it is a calcareous limestone, probably of sufficient hardness to make its working difficult).

* See the *Amherst Tablets*, vol. i. p. 2. The woman's crown appears in the reproduction published by M. N. de Likhatscheff, St. Petersburg, 1907.

§ *Découvertes en Chaldée*, pl. 30 *bis*, 17*b*. It is not exactly known why the Babyloniane and Assyrians represented their deities wearing horned hats. In the primitive design described above (p. 833), the demons or bull-men have horns placed directly upon their heads. Perhaps this is an artist's device to show who, among the figures in the picture, are gods and who are men, just as the star placed before the names of deities in the inscriptions is not an indication that all the deities are stars (though some of them were so regarded), but simply means that the gods belonged to the place where the stars are, namely, the heavens.

‖ Numerous representations of this kind will be found in the *Amherst Tablets*, vol. i. pp. 40, 63, 83, 141, 158, 196, etc.

** A very fine but fragmentary relief, showing Gudea (*c.* 2500 B.C.) brought before his god by two introducers, is given in Meyer's *Sumerien und Semiten in Babylonien* (Königliche Preuss. Akad. der Wissenschaften, 1906), pl. vii.

†† *Découvertes en Chaldée*, pl. 1, No. 1.

The deities at this period are represented wearing mantles which recall, in a measure, the Roman cloak wound round the body, and thrown over the left shoulder, leaving the right shoulder and arm bare. These garments seem sometimes to be represented as made of the skin of some animal, such as the goat (which seems to have been a sacred animal), sewn together in long strips giving the appearance of flounces. This costume distinguishes divine personages, or those who claimed divine kinship. A squat little figure in alabaster, standing with folded arms, and wearing a dress of this kind, the head bound round with a fillet crossing behind the long carefully-arranged hair,* may be a divinity, or the priest of a god.

It is noteworthy that though, in the archaic fragment above described† and on the cylinder-seals, the deities are represented in profile, in bas-reliefs of somewhat later date they are often shown front-face. Whether front- or side-face, however, the horns on their hats, which vary from two to eight in number, are shown as if the front of the head-dress were towards the spectator.‡ Goddesses are shown dressed similarly to the gods, in horned hat and robe of skin, but the right shoulder is covered as well as the left. One small fragment§ shows a goddess wearing a hat with a single horn on each side. Her hair descends in graceful curves upon her shoulders, necklaces adorn her neck, upon which is also a triple row of beaded work which disappears beneath the low-cut neck of her goat-skin robe, over which, from each shoulder, descends a beaded stole. She holds in her hands a vase from which flows a twofold stream of living water. Here we have something really good and artistic—almost æsthetic. The work is so dignified, the idea intended to be conveyed (that of a beneficent goddess bearing the water of life) so well expressed, that the spectator realizes that he has before him the work of a people who knew what they wished to express, and had skill to express it.

After that, the picture of a god,‖ apparently of the same period, is disappointing, though even this has its excellences. Its shortcomings are probably due mainly to the damage which the stone has received. A deity, front-face, bearded, and holding what seems to be a staff or symbol, is seated on a low-armed chair with a high and slightly bent back. He wears the usual robe of skin, and hair falling upon his shoulders. In spite of the damage to the stone, the dignity of the face is striking. Reliefs in terra-cotta, apparently produced from moulds, also occur. A very good example¶ shows a male figure nearly nude, wearing a horned hat, and plaited hair descending to each side of his longish beard, where it ends in two tightly-arranged curls.

The bronzes, though not numerous, are excellent of their kind. They represent *canephoroi* (priestly rulers as bearers of gifts to the temple), human figures and seated bulls, on a kind of tang for insertion in a socket, and the well-known kneeling figures in horned hats holding inscribed cones (regarded by some as the god with the fire-stick). They are of the nature of votive statuettes,** and were used as the bearers of stone inscriptions detailing the building of temples.

(2) *With the advent of Semitic influence* (*c.* 2100 B.C.) there is a change in the representation of certain of the deities. The horned hats and the skin robes are found, but, in the case of what may be regarded as the warrior-gods, short tunics and thick-brimmed hats appear, and the deity grasps in his right hand a short weapon, held close against the body. The beard also spreads over the breast. Sometimes the thick-brimmed hat is combined with the long flounced robe of skin. The cylinder-seals of this period are often very finely engraved, especially those of hæmatite. The bas-reliefs follow the style of the cylinder-seals, but seem to keep more to the old costumes. A very good specimen of the lapidary art of this period is the representation of Ḫammurabi before the sun-god Šamaš, at the top of that king's Code of Laws.* Ḫammurabi has flowing robes reaching to his feet, and a thick-brimmed hat. His right shoulder is bare, and his hand is raised as if addressing the deity. The sun-god, heavily bearded, wears a flounced robe without any indication whatever of a hairy surface. Upon his head is a pointed hat, with four horns curving upwards in front—eight in all. Wavy rays proceed from his shoulders. His seat has four superimposed recesses, such as are often found both in bas-reliefs and in designs on cylinder-seals. His right shoulder is bare, and in his hand he holds a staff and a ring, emblematic of his endless course and his authority as judge of the world. The work is good and well finished, but wanting in lightness and detail. The bronzes of this period seem to have maintained the excellence which those of the preceding period show. One, probably now in private hands, is a good reproduction, in the round, of one of those divine attendants so often shown in the cylinder-seals as a graceful female figure in a horned hat and wearing a robe of skin, holding up her hands with the palms facing each other. When the deity and the owner of the seal are absent, these attendants are sometimes shown in the same attitude of adoration before the divine name contained in the inscription.

(3) *In the Kassite period* we meet with another style for the cylinder-seals, the work being exceedingly plain and flat, and wanting detail. The designs are, moreover, confined to single figures, either sitting or standing, and accompanied by some emblem—a cross, one or more birds, etc.; and in one case even a fly, suggesting that the deity may have been the Babylonian Beelzebub. These designs probably form the transition to the later Babylonian style of art, in which the robes are likewise very plain; but the work, which seems to fall off somewhat during the Kassite period, later assumes remarkable accuracy and finish.

It is to the Kassite period mainly, however, that the boundary-stones which have come down to us belong. These objects (generally inscribed with grants of land) are sculptured with 'the signs of the gods' as a protection against the wrongful alteration of the boundary or changing the conditions of the deed, etc. Those found by the de Morgan expedition at Susa† are of special value, as they have sometimes short inscriptions which enable the signs upon them to be identified. The sun is represented by a disc having a flaming star within; the moon by a crescent; Venus by a star; Nusku ('the light of fire') by a lamp; Gula, goddess of healing, by a female figure in horned hat and robe of skin, etc. We see on them also the fish-goat, the scorpion, and the bull emblematic of Addu (Hadad). The signs vary on each stone, and the work is seldom really well finished, that of Nebuchadrezzar I. in the British Museum being in all probability the finest specimen.‡

(4) Comparatively early in *the latest period* (*c.* 900 B.C.) comes that magnificent specimen of Babylonian art, the sun-god stone, found beneath the

pavement of the temple of the sun at Abu-habbah by Mr. H. Rassam. It shows a design derived from the early cylinder-seals. The sun-god sits in his shrine, wearing horned hat, robes of skin, and long beard. In his right hand he grasps his staff of justice and the circlet of his everlasting course. At the top of the shrine two little figures, personifying righteousness and justice, guide with cords the great disc of the sun erected on the table below. A divine personage leads Nabû-âbla-iddina, the king who had the stone sculptured, into the presence of the god, and a divine attendant in the nsual attitude of veneration follows behind. The ground consists of wavy lines (the waters above the firmament) with stars below, pointing to the probability that the scene is laid in heaven. The figures are a little too broad, but the work is excellent, and may be regarded as maintaining all the traditions of Babylonian art.*

Figures of deities during this late period are rare, but there is evidence in the antiquities found that they did exist. On the cylinder-seals emblems similar to those found on the boundary-stones of the preceding period often take their place, such as the sun's disc and the moon's crescent mounted on a tall object set on square corniced and panelled plinths. A burly clean-shaven priest stands before the emblems in an attitude of adoration. The fish-goat and other deities copied from the boundary-stones also appear.

2. **Assyria.**—But it is Assyria, from about B.C. 885, that furnishes us with the greatest wealth of material for the study of Assyro-Babylonian religious art. In the sculptures of that date (time of Aššur-naṣir-âpli) the king is represented as the great high priest. Assyria being a country possessing stone, the sculptors were not dependent on such chance fragments as they could get, and magnificent bas-reliefs indicate what her artists were capable of. The examples from Nimrûd (Calah) show us the king, clothed in garments splendidly embroidered with representations of all kinds of mystic emblems and ceremonies,† himself engaged in ceremonial acts, surrounded by his eunuchs and drinking from the sacred cup, while winged genii offer him the divine pine-cone, or something of similar shape. In other sculptures we see him worshipping before the sacred tree, above which hovers the winged disc representing Aššur, the chief god of the Assyrians.‡ Familiar to all are the reliefs showing the adoration of the sacred tree,§ and the winged figures carrying offerings of flowers and young animals.‖ An admirable example of religious art is the sculpture from the entrance of the temple of Ninip, representing the expulsion of the dragon of evil from the building, which was repeated on the other side of the doorway.¶ As a testimony to the divine status of the king we have the image of Aššur-naṣir-âpli on an arch-headed monolith, and the sacrificial altar which stood before it at the entrance to the temple.** Though the figures are too thick-set, the work is excellently finished, and the details carefully indicated. This applies also to the winged bulls and lions of this reign, though they are wanting in vigour.†† The effect is somewhat marred by the long inscriptions which are carved across the sculptured work of this reign.

Based upon these or similar models are also the religious sculptures of Tiglath-pileser III., Sargon, Sennacherib, Esarhaddon, and Aššur-banî-âpli; but though they belong to the same school, the improvement in style can easily be traced, until we reach the delicate perfection of many of the sculptures of the last-named. Whilst the sculptures of Aššur-naṣir-âpli give us the Assyrian idea of the sea-god Ea (Syncel. *Chron.* 28; Euseb. *Chron.* 5, 8), who was clothed with a fish's skin,* Dagon, according to a sculpture of Sargon from Khorsabad, was shown as a deity with a horned hat, carefully-curled hair and beard, and a close garment reaching to his waist, where the scaly lower part, ending in a fish's tail, begins† (cf. 1 S 5[4] [' the stump of] Dagon,' AVm ' the fishy part '). Noteworthy, though clumsy, are the statues of Nebo standing in what is regarded as an attitude of meditation.‡ On a cylinder-seal, apparently of the time of Aššur-banî-âpli, and bearing a dedication to Nebo, is shown a divine figure holding two winged bulls by one foreleg, whilst they incline their heads gracefully towards him. If this be Nebo, and the design have a symbolical meaning, it may typify the power of the wise to overcome the strong.§ Turning to the bas-reliefs of Aššur-banî-âpli, we may note the scene where, to the sound of zithers, the lions which the king has killed in the chase are brought home, and before a sacred emblem and a table with viands he pours out an offering of wine over the beasts lying on the ground.‖ This is in the best Assyrian style; the figures of Aššur-banî-âpli¶ and his brother of Babylon as basket-bearer at the restoration of the temple Ê-zida there, though good, fall somewhat short of the sacrificial scene.

Whether it is votaries or ministering spirits in the form of Ištar or of Maḥ (Merodach's spouse as she who presided over births) who are represented by Aššur-naṣir-âpli as making offerings before the sacred tree,** is uncertain—probably the latter. Ištar is apparently represented on a cylinder of the British Museum as a goddess in warlike guise, armed with bow and arrows, and standing upon a lion, which turns its head to lick her feet. A eunuch-priest stands before her, and the design is completed with the palm-tree and rearing goats whose bodies cross symmetrically. It is a gem of Assyrian religious art.††

The sculptors of that time likewise give us an idea of the spirits, evil and otherwise, in whom the Assyrians believed. Besides the four-winged genii, demons with snarling lion-heads, ass's ears, and eagle's claws, are shown. Sometimes they threaten each other with dagger and mace,‡‡ at other times they raise their weapon menacingly against a person unseen. But they are powerless in consequence of the protecting spirit in the form of a man in front, who with mystic sign casts an unseen spell. In some cases there is also a bearded and ringleted spear-bearer behind, similar to the nude figures on the Babylonia cylinder-seals of B.C. 2500, showing how long these things persisted.

No artistic remains from Assyria later than the reign of Aššur-banî-âpli are known.

There is hardly any doubt that the high level of Assyro-Babylonian art is due to the deep religious feeling of the two nations. Their sincerity is re-

flected in their work, which, if the nations producing it had continued to exist, might have attained a perfection which would have rivalled even the art of Greece and Rome. How far the influence of their art extended, it is difficult to say. Connexion with that of Phœnicia may be traced, the most striking instance being Esarhaddon's clay seal (referred to on p. 884).

ART (Buddhist).—See artt. on BURMA AND ASSAM (Buddhism in), INDIAN BUDDHISM, JAVA, SIAM, and art. TEMPLES.

ART (Celtic).—The article 'ART (Christian)' is designed to bring into view the various forms in which art in the modern era has been made the expression of religious feeling. Special attention is there given to that phase of Christian art in which there is little or nothing of the representative element, but on the other hand a lavish display of taste and skill and care, all consecrated to the production of a worthy offering of beauty for the service of religion. Celtic art represents this form of artistic expression perhaps more perfectly than the art of any other time or people, and this is one of the reasons why it here receives a special treatment. The spirit of monastic craftsmanship, in all its single-minded devotedness, is nowhere seen in such purity as in the ornamentation of Celtic manuscripts, or the exquisite ecclesiastical metal-work that had its home in the Ireland of the early Middle Ages.

Definition and scope.—By Celtic art is meant, of course, Celtic ecclesiastical art,* and this is related to Christian art in general just as Celtic Christianity is related to the whole religious system of the West. In each case we have to deal with a distinct province, the characteristic features of which are the outcome of special historical and geographical conditions. The Celtic religious area was practically un-Romanized, and it differs in this from all the other regions of Western Christendom. Part of the area lay entirely outside the Roman Empire, and other parts were only dubiously within it, while, on the other hand, after the area had received Christianity, it developed its church life and institutions in complete independence of the Roman ecclesiastical system. In like manner, the art of this same area differs from Christian art in general in that it is far less dependent on Roman tradition and models. Some of the forms of ornament which the Celtic Christians employed in the service of the Church were drawn, not from the familiar *répertoire* of classical motives developed and used by the Mediterranean peoples, but from a stock of forms of hoary antiquity that existed in Central and Northern Europe from a time before the beginning of distinctive classical culture in Greece and Italy. In connexion, therefore, with Celtic art, we are brought into contact with fresh and interesting artistic motives that we hardly meet with elsewhere in the wide domain of Christian art in general.

A word may be said on the local setting of Celtic church life, and of the art which was its outcome and its adornment. At the time of the introduction of Christianity the Celtic peoples in Eastern and Central Europe had yielded place to tribes of Teutonic descent, but they were still in possession in Gaul and in the British Isles, where they had developed, on Central European traditions, some elaborate and beautiful forms of decorative art. The conquest of Gaul and of Britain up to the Forth and Clyde Romanized to a considerable extent these Celtic lands. Christianity was probably introduced into Gaul, not from Rome or from Italy, but from Greek-speaking lands in the wake of Massaliote or Narbonnese commerce, and spread thence into the isles of Britain at a time and by agencies that cannot now be clearly determined. That the Gallic Church was the mother Church of those in Great Britain and Ireland is sufficiently established; and, so far as all these lands were included in the Empire, the Roman municipal and provincial system furnished the Church with a ready-made framework for its organization—an organization which we know existed in Britain on Gallic lines as early as the beginning of the 4th century. This Gallo-British Church, however, pushed its missionary activity into regions entirely outside or only nominally within the limits of the Empire, and here there were no effective Roman institutions to provide this framework. Church organization here, so far as it existed, was quite different from what it was in Romanized lands. It was not territorial or civic, but tribal and personal; that is to say, the bishop, the chief ecclesiastical functionary, was not bishop of a Roman *civitas*, i.e. a town with its surrounding district, but of a tribe, and was largely dependent on the personal support of the tribal chieftain. In other respects also the differences were equally marked.

Representatives of this missionary activity were Ninian, who looked to St. Martin of Tours as his exemplar, and soon after A.D. 400 evangelized the Southern Picts of Scotland; later on, Kentigern, who laboured in Strathclyde and Wales; and, most important of all, Patrick, who, a little later than Ninian and a century before Kentigern, stamped the impress of his personality so deeply on Ireland that he has remained ever since the patron saint of the island. We can gather from Patrick's own writings that Gaul, where he had received instruction and orders, bounded his ecclesiastical horizon, and he was clearly a missioner of the same type as the others just mentioned, who was working independently on the lines laid down by the social conditions of non-Romanized Celtic lands. Under the guidance of these single-minded evangelists, Celtic Christianity in these lands was free to evolve and maintain its own special ecclesiastical character, and this was especially the case in Ireland.

This exceptional character which attaches to the outward apparatus of Christianity in Ireland was further emphasized by the fact that after the island had received the new religion it was cut off from the rest of Christendom for a century and a half by the Saxon conquest of England, which interposed a barrier of paganism between the Christian West generally and this outlying province. Direct intercourse between Gaul or Spain and Ireland, which had existed from early times, was also checked owing to the political convulsions due to the Gothic and Frankish invasions. Hence it came about in certain ecclesiastical matters that, while changes were worked out in Western Christendom generally, Ireland, in this way isolated, preserved her more primitive forms, some of which had once been common to all provinces of the Church alike.

One of these forms, which had once been common but afterwards became conspicuous for its singularity, was the monastic settlement consisting in a number of separate cells and of small churches or oratories. This was everywhere in Christendom the earliest form of the monastery, because the hermit's cell answered to the primal impulse in the votary's mind of retirement from the world. The reputation for sanctity of the first recluse drew others about him, and so a community of considerable size might be formed, numbering possibly, as Bede tells us of the British monastery at Bangor near Chester on the Dee, as many as two thousand souls. The members of such a community, whether few or many, lived beside each other but not together. The arrangements for life in common, which English and Continental ruined monasteries have made so familiar to us—the cloistered court, the common refectory and sleeping-room—were all absent. These were Benedictine features, and did not come into use till the 6th or 7th cent., from which time onwards they were gradually introduced all over the Romanized West. Eastern Christendom, which Benedictinism hardly affected, and the Celtic regions outside the Empire, or on its north-western border, remained faithful to the older system.

Monastery the home of ecclesiastical art.—Celtic monasteries of the kind indicated existed not only in Ireland but in Scotland, in Wales, and in other parts; but it is in the first-named country that they have left the clearest monumental evidence of their character. Even as early as the time of Patrick—the first half of the 5th cent.—Irish men and women were devoting themselves with ardour to the religious life, and the sites of ancient settlements are almost innumerable. Those in the remoter and less accessible regions, such as the islands and rocky headlands of the indented western coast, are, as a rule, the best preserved, and we may take as an example the settlement on the most retired spot of all, the rock of Skellig Michael, an isolated peak about 10 miles out in the Atlantic, off the coast of Kerry. Here, at the height of some six hundred feet above the sea, we find on a terrace, sustained by a magnificent retaining wall of dry, *i.e.* uncemented, stone-work,

* For pre-Christian Celtic art see CELTIC RELIGION.

half a dozen or so of hermits' cells and two or three tiny oratories used for service and private prayer. The cells, and all other structures except one of the oratories, are constructed of the same dry stone-work, and according to methods that carry us back directly to pagan times. The terrace wall is of precisely the same construction as the vast ramparts that form the successive *enceintes* round the stone forts of unknown date and origin on the headlands and islands of Galway or Kerry. The cells are round or oval in plan, and are of a beehive form, the layers of flat stones of which they are composed gradually narrowing their circles till a dome-like finish terminates the whole, an opening being left at the summit for the egress of smoke. This method of construction also is pagan, and may be found in the central stone chambers of the great pre-historic burial tumuli at Newgrange, Dowth, and other places beside the Boyne. That the cells on Skellig Michael are Christian is proved by the fact that over one of the doorways white quartz stones have been set in the form of a cross. The smallest of the little oratories is one of the most interesting of early Christian structures. Its interior length is only about eight feet, and it has a door at one end and a window over the altar at the other end, which is turned towards the east. The construction is similar to that of the cells, but the plan is rectangular, and the walls are made to converge till they meet in a ridge at the top. The little oratory stands apart from the rest of the structures of the settlement, on a jutting corner of the terraced platform, and we may well fancy it a place where the worshipper might tarry awhile and meditate, in this almost inaccessible eyrie between sea and sky.

Such meditations availed much for Christendom at large, for these Irish hermit monks were at the same time the most indefatigable of missionaries. That passion for solitude which drew the Celtic Christians away from the world was only one of the tendencies in their emotional piety, and is balanced by quite the opposite passion for wandering and evangelistic enterprise. To carry on this work effectively they seem to have needed to submit themselves from time to time to certain spiritual influences, which should act on their inner nature and charge them as it were with an electric force that radiated with irresistible potency when they journeyed forth as missioners. It was in places of solitude and retirement, like Skellig Michael, that the fire was kindled and fanned till it burst into the proselytizing fervour of a Columba, an Aidan, a Columbanus. We are here at the source of a stream of Christian influence that flowed with beneficent effect over all the land of Britain and far across the Continent of Europe. Ireland gave Columba to Scotland, Scotland Aidan to Northumbria, and from Northumbrian Lindisfarne proceeded the effective conversion of the Angles, while some of the greater Continental centres of the religious life looked to Celtic missionary saints as their founders.

The foregoing details are germane to the purpose of this article, for we have to note that the arrangement and the life of the Celtic monastery had great influence on the forms and æsthetic character of Celtic ecclesiastical art. It is not pretended here that all the artistic activity of the early mediæval period was centred in the monastery. The monastic craftsman plays a predominant part in the artistic history of the time, but he had no monopoly. Among the northern peoples in the pagan period, the fabrication and adornment of weapons, implements, and objects of personal wear, gave employment to artistic workmen whose skill and taste are in their way unsurpassed, and there is no reason to believe that the introduction of Christianity broke this tradition. In Ireland the Tara brooch, in Scotland the Hunterston brooch, dating about the 8th cent., are pieces of secular art, and we need not credit them to the monks. On the other hand, as the mediæval period advanced, sacred art undoubtedly preponderated over secular, and sacred art was specially cultivated in the cloister. In time, as Mr. Romilly Allen has remarked (*Celtic Art in Pagan and Christian Times*, 1904, p. 171), 'The priest took the place of the warrior as the patron of the fine arts, and monopolized all the available time of the metal-worker and enameller in making beautiful vessels for the service of the Church.' In periods of political unrest, such as on the Continent followed the breaking up of the Roman provincial administration, the convent offered conditions more favourable to artistic activity than were to be found outside, while certain forms of art in great demand at the time, such as the writing and adornment of books, were practically in the hands of the religious. The Celtic monastery may accordingly be regarded as the home of almost all the artistic production of the time that had an ecclesiastical purpose, and it will lend force to this statement to quote the nearly contemporary record as to the making and putting forth of one striking monument of Celtic art, the so-called *Gospels of Lindisfarne* or *of St. Cuthbert*, a manuscript dating from the end of the 7th or beginning of the 8th cent., and now one of the treasures of the British Museum. In an Anglo-Saxon colophon of the 10th cent. appended to St. John's Gospel, we are told that 'Eadfrith, bishop over the church of Lindisfarne, wrote this book in honour of God and St. Cuthbert, and all the company of saints in the Island; and Ethelwald, bishop of Lindisfarne, made an outer case and adorned it, as he was well able, and Billfrith the anchorite, he wrought the metal-work of the ornaments on the outside thereof, and decked it with gold and with gems.' The fact that Billfrith is called the anchorite ('se oncra') shows that fine metal-work with the setting of gems was carried on by the solitary recluse in his cell. The extreme minuteness and elaboration of this is, in fact, just what we should expect in work executed under these conditions; and this applies with even greater force to the manuscripts, wherein ingenious planning of ornamental schemes and faultless execution of multitudinous convoluted detail must have made the lonely hours pass lightly away.

Celtic ecclesiastical art in general was of a kind that could be carried out single-handed and in small interiors. Work that needed the co-operation of many hands and large spaces was little in vogue. In the Benedictine monasteries of the Continent the dominant art was architecture, and vast buildings for the accommodation of communities were devised, planned, and sometimes actually achieved by the inmates in person. Romanesque architecture is in the main monastic, and the great abbey church is its crowning achievement. In Ireland and other Celtic areas early conventual buildings were, as has been seen, smaller and simpler; and though they may possess great constructive interest, little pains have been taken with their ornamentation. From the traditional dry-stone building, illustrated on Skellig Michael, there were evolved on the one hand certain striking features in the framing of openings, etc., and on the other some interesting forms of vault construction. The single-celled oratory was enlarged by the addition of a second cell, also rectangular, forming when smaller than the first a presbytery or chancel, and when larger a nave: and this type of church plan, differing from the type with apsidal termination which belonged to the Roman tradition, appears in England after its conversion by the Celtic evangelists, who may thus have contributed towards the establishment of our insular preference for square-ended churches. The most striking peculiarity of Celtic church architecture in early mediæval times is the detached round tower, abundant in Erin, though represented by only a few stray examples in other parts of these islands. These towers are always connected with religious establishments, and it is now acknow-

ledged that they were primarily designed as towers of refuge, though also employed as belfries. The dangers against which they furnished temporary security were the Viking inroads with which from the beginning of the 9th cent. onwards the country was scourged. It is stated by Miss Stokes in her *Early Christian Art in Ireland* (ii. 57), that, in the entries in the Irish annals,

'regarding the attacks of the Northmen from 789 to 845, it is recorded that the clergy fled for safety into the woods . . . but in the year 950, and for two centuries later, we read of the "cloiccthech," house of a bell, as a special object of attack to the Northmen.' A record relating to Brittany (quoted *ib.* p. 56) speaks of the erection near a church in that Celtic region of a 'little round tower . . . wherein to deposit the silver-plate and treasure of the same church, and protect them against the sacrilegious hands of the barbarians, should they wish to pillage it.'

The construction of the extant round towers bears out this evidence of their origin and intention, for in almost every instance the doorway of access to them is at a substantial height above the ground, and was accessible only by means of a ladder, which could be drawn up when the temporary garrison was housed within it. The interiors had wooden floors at different stages reached by ladders, and in the uppermost was the place for the bell.

The features here described are specially but not exclusively Irish. In other Celtic regions which were practically outside the Empire, and to which the influence of the ecclesiastical Rome did not penetrate till a later date, we find specimens, or at any rate relics and traces of them. Scotland, especially in the north and west, is well supplied; for example, the 'Isle of the Saints,' *Eilean na Naoimh*, not far from Mull, has a group somewhat similar to that on Skellig Michael; but Wales and Cornwall have very little to show in the way of structures that are prior to the Norman Conquest. In Ireland such structures are at once more numerous, more clearly marked, and better preserved than they are elsewhere. The plainness of these early Irish structures has already been noticed, and is remarkable in a country where the arts of ornament were flourishing in the Pagan period, and were destined to develop for Christian service into forms so elaborate and beautiful. The rude stone building gave place to cut stone-work, and to the use of the arch and of lime mortar; but the same character of plainness prevailed till about the year 1100, when a rich and somewhat fantastic style of architectural embellishment came into vogue, with which was soon mingled the undoubtedly Norman element of the chevron, or zigzag. With the development of this so-called Irish Romanesque, Celtic architecture loses that special character it had derived from the primitive methods of dry-stone construction, and comes into line with the other local styles of Western Romanesque. The subject need not therefore be further pursued.

i. STONE-SLABS, CROSSES, etc.—If the earlier Celtic masons did not carve ornament on the stones of their religious buildings, they made up for this by considerable activity in sculpture of another kind. The reference is to the incised or carved stone-slabs and crosses, a monumental form of Celtic art represented by abundant examples in all the Celtic and also in the Teutonized parts of the British isles. No complete comparative survey has yet been made of the whole body of monuments, but there exist monographs on the various groups, the most complete and elaborate of which is the ponderous volume issued in 1903 by the Society of Antiquaries of Scotland under the title, *The Early Christian Monuments of Scotland*. The subject is a very large one, for the monuments in question in the Scottish area alone number about five hundred, and it can, of course, only be touched on here.

In the matter of distribution, we may distinguish the following provinces in which the monuments occur in groups large or small. (1) Southern, eastern, and midland England. The monuments here are sporadic, and some regions are bare of examples, though in other parts, such as Derbyshire, they are well represented. (2) North-eastern England and the same side of Scotland up to the Forth, the region forming the ancient kingdom of Northumbria. Here the monuments are very numerous and of great artistic merit. In point of art they show a combination of Celtic elements with those derived from classical sources, and exhibit inscriptions partly in Roman letters and partly in runic characters derived from Scandinavia. (3) Galloway or south-western Scotland, the scene of the ministrations of Ninian to the southern Picts, represented by some interesting early monuments of a Gallo-Roman type. (4) Cumberland and the Isle of Man, and in part Lancashire, where the art of the stones betrays a Scandinavian influence. (5) Eastern Scotland north of the Forth and south of the Moray Firth, known to historians as the ancient 'Kingdom of the (northern) Picts.' The stones here exhibit certain devices peculiar to this region that are for the most part unexplained, though probably Christian in significance, but in the main their art is of the Celtic type. (6) Central, northern, and western Scotland, where Celtic art prevails with a certain Scandinavian admixture. (7) Wales, a region specially well represented by monuments of this class, in which the art is Celtic, the epigraphy partly Roman, and partly in *ogham* characters, that is, in a native Celtic style of writing answering to the Teutonic runes. (8) Cornwall and Devon, the monuments of which on the whole resemble those of Wales. (9) Ireland. This region, with parts of northern and western Scotland, was, as we have seen, entirely un-Romanized; and here the art, with the language, and to some extent also the epigraphic character, of the inscriptions, is almost wholly Celtic.

Of these provinces all but the first and second are entirely, or, to a preponderating extent, Celtic, for the 'Pictish' element in (5), though very remarkable, does not affect the general character of the monuments. The ancient Northumbria, (2), was Teutonic in government and (with of course the admixture of older races) in population, though its art was preponderatingly Celtic. That this region was effectively Christianized by Celtic missionaries from Lindisfarne has already been noticed, and it is highly significant that one of the most important of all monuments in the recognized Celtic style of manuscript illumination was produced and ornamented there by Anglian hands at a time when the Celtic monks had already retired from the island. The existence of this datable monument, noticed in this article on p. 838[b] (the *Gospels of Lindisfarne* or *of St. Cuthbert*), shows that we might expect the same Celtic style in other monuments of the region; and this we accordingly find, mingled with other elements, in the early sculptured stones now under consideration. This may be fairly held to show great vitality in Celtic art, as well as an attractiveness for the Teutonic population. In view of it, it will not be surprising to find that the monuments scattered over the rest of England, (1), exhibit also a prevailing Celtic character, which reminds us that it was influenced in almost every part by Celtic missionary activity. We are therefore justified in regarding the whole body of these monuments as so far Celtic that they cannot be excluded from any general survey of Celtic art.

It is with the art of the stones, not their epigraphy, that we are here concerned; but the inscriptions cannot be entirely disregarded, for they often afford valuable evidence of the nature and provenance of the monuments. The questions that

have to be considered concern (1) the character, (2) the form, (3) the ornamentation of the stones.

1. Character.—The inscriptions show that the majority of them are sepulchral, and as such they represent a form of monument that has been in use since Neolithic times. At the single site of Clonmacnoise in Ireland, there are nearly two hundred of these tombstones, all inscribed, and many ornamented. This religious establishment beside the Shannon, a place of surpassing interest, was founded by St. Ciaran in the middle of the 6th cent., and an Irish poem thus celebrates 'the peaceful clear-streamed place':

> 'Ciaran's city is Cluain-mic-Nois,
>
> Nobles of the children of Conn
> Are under the flaggy, brown-sloped cemetery;
> A knot, or ogham, over each body,
> And a fair, just, ogham name.'

Of ogham inscriptions on these stones only one has been known in modern times, and the rest are in Roman minuscules. Among the names that can be read upon them is that of Suibine, son of Maelhumai, of the latter part of the 9th cent., celebrated as one of the most learned Churchmen of his time. Inscriptions, however, also show that many sculptured stones were not sepulchral but commemorative, or devised for other purposes. Thus at Kells in Co. Meath there is a cross with the inscription, 'The cross of Patrick and Columba,' which was erected centuries after the death of the saints whose names it celebrated. Most of the so-called 'High Crosses' of Ireland—elaborately sculptured stone monuments of the 10th cent.—were apparently of this commemorative character. In Northumbria we know, from Simeon of Durham (*Hist. Reg.* § 36), that two sepulchral crosses stood at Hexham at the extremities of the grave of Bishop Acca, who died in 740, but the Ruthwell Cross is shown by its inscription to have been a memorial of the sacrifice of Christ. We are told in the *Life of Kentigern*, by Joceline of Furness (late, but based on older materials), that the saint was accustomed to erect 'the triumphant standard of the cross' to commemorate any marked successes in conversion; and in Wessex we have evidence (*Acta Sanctorum*, Jul. 11, p. 502) that 'the sign of the Holy Cross' was set up to mark a place of Christian assembly before the building of a church. Again, some crosses were terminal, that is, they defined a boundary by a landmark which religion made inviolable. An Irish pillar stone at Killnasaggart, Co. Armagh, proclaims that the place which it marked was under the protection of St. Peter, while one of the interesting early stones at Whithorn in Galloway, Ninian's missionary centre, is inscribed 'The Place of St. Peter,' and was evidently a boundary mark.

2. Form.—In the matter of form, the earliest class of stone monuments are pillars unshaped by the tool, after the fashion of the pre-historic menhirs, and correspond to the rude stone building of the early Celtic Christians inherited from their pagan forefathers. These pillars have on them inscriptions in one or other of the languages and characters noted in the enumeration of the provinces, and sometimes incised crosses or sacred monograms. These last, though in themselves, from the æsthetic standpoint, negligible, become of importance as the origin of the form of the shaped free-standing crosses of later times. In Galloway there are upright pillar-stones with Latin inscriptions, and the Chi-Rho (☧) monogram in different forms which are early, but probably not so early as the time of Ninian himself. This monogram appears within a circle, in which we may see a reminiscence of the wreath that enclosed it on the original *labarum*, or standard of Constantine, described by Eusebius; and this wreath, or circle, becomes later the stone ring, which in the well-known 'Celtic' form of the monumental cross is seen connecting the arms. The Chi-Rho monogram changes into the form of a cross by the addition of a horizontal bar across the upright stem of the original Rho (P), and the arms of the cross, though originally enclosed within the circle, come afterwards to protrude beyond its circumference. This transformation can be seen in progress in a half-developed cross at Penmon Priory in Anglesey.

The untooled pillar-stone does not of course itself change directly into the free-standing cross, though the incised monogram it bears has influenced the development. The actual process was as follows: The pillar-stone corresponds, as we have seen, to the rude stone building. When this gives place to the construction with cut stone and cement, the former is similarly changed to a dressed monument, which may be recumbent, in the shape either of a flat slab, which is *par excellence* the Irish type as represented at Clonmacnoise, or of a 'coped' or 'hog-backed' stone, such as occurs chiefly in the north of England, and is more probably of Anglian or Scandinavian than of Celtic origin; or else may be upright, in the form of a smoothed slab like a modern tombstone. The flat recumbent Irish slabs are adorned with incised crosses, the upright slabs with crosses in relief. From these latter were developed the free-standing crosses by the following stages. When a cross head contained within a circle is carved in relief on a slab, the upper part of this may be rounded off to follow the curve of the circle, as on a stone from Papil by Shetland, in the Edinburgh Museum of Antiquities. Next, the part of the slab below the head of the cross is cut in a little to correspond with the form of the comparatively slender shaft, and we obtain the shape known as the 'wheel cross'—a shape confined to the Isle of Man, Wales, and Cornwall. The background may now shrink in still further towards the outline of the shaft, while, by a contrary process, the arms of the cross are allowed to protrude beyond the circle which has enclosed them, and the final step is taken when, as it has been said (Romilly Allen, *Celtic Art*, p. 186), 'the portions of the background of the cross between the quadrants of the ring and the arms are pierced right through the slab, thus giving us the "four hole" cross of Cornwall and the typical High Cross of Ireland,' in which the outline of the stone corresponds with the outline of the Cross.

3. Ornamentation.—The subject of the ornamentation of the slabs and crosses cannot be discussed without reference to Celtic decorative art in general. The forms in which this expresses itself, apart from the carving on the stones, are practically confined to fine *metal-work* and the *illumination of manuscripts*, for in extant specimens of the Celtic Christian period, productions in other materials, such as wood, ivory, or textiles, are so rare as to be in the meantime negligible. On stone, metal, and the parchment of books, Celtic artistic feeling externalized itself in elaborate and varied ornamental patterns, the design and technical execution of which have excited the wonder of all subsequent ages, from the time of Giraldus Cambrensis in the 12th cent. downwards. The same patterns and methods of application appear in all three forms of art, and some of the best authorities treat the stone carving as later in date than the similar work in the other materials. It is a curious fact that certain details of the Irish High Crosses have no meaning in stone-work, while there is a technical reason for them in work in

metal, and this would indicate the priority of the latter. Again, the similarity between richly decorated cross-slabs, of which Scotland is the home, and the emblazoned pages of ornament in Celtic manuscripts, cannot fail to strike the observer. Hence it is maintained that the styles of artistic treatment which are in question here were first evolved on the pages of books or in metal, and then transferred to stone; and Mr. Romilly Allen believes (*Celtic Art*, p. 171) that the book-work was prior alike to that on metal and on stone. At first sight this seems contrary to natural likelihood, for there is much elaborate and beautiful Celtic metal-work of pagan date and also a certain amount of decorative carving in stone, whereas manuscript writing and illumination came in as a totally new form of craftsmanship with the introduction of Christianity. Irish experts converted to the new faith could continue for Christian service their metal-work or stone-carving, while it would take them a long time to learn the new art of caligraphy and illumination. The first books used in Christian worship would be imported, and would only very gradually be supplanted by those of native production. Hence we should expect to find Christian metal-work and stone-carving earlier than the same art applied to books.

Here, however, we are met by rather a curious fact. Christianity at its first introduction did not seem to inspire the Celtic artist, but rather to repress his activity, so that, as Romilly Allen states, 'before about A.D. 650 there was no distinctively Christian art existing in this country' (*op. cit.* p. 165). He accounts for this on the theory that the introduction into the British Isles of Christianity itself was much later than is generally supposed, and suggests A.D. 450 as the date of this. The negative evidence of the dearth of really early Christian monuments in this country had so impressed him that he has called the significant and quite unquestioned notice of the presence of three bishops of Roman towns in Britain at the Council of Arles in A.D. 314 one of 'the vague and unsatisfactory statements of the mythical period' (*op. cit.* p. 164). Archæological evidence, however, must be weighed along with literary, and not allowed to supersede it. To take an instructive parallel, if we were left only to literary evidence for the condition of the earliest Christianity at Rome, we should probably believe that art was at that time tabued. Monumental evidence, however, as shown in the article 'ART (Christian),' is conclusive that the earliest Christian Church at Rome not only accepted art as part of its external dress, but soon began to use it for definitely Christian purposes. Conversely, if we were left to monumental evidence alone for Christianity in early Britain, we should believe that it hardly existed, for Romano-British Christian monuments are extremely rare, and those belonging to the 5th or 6th centuries are few and artistically simple and even rude; yet the Romano-British Church had progressed so far by the early part of the 5th cent. as to have established the flourishing Pelagian heresy, and after the Saxon conquest it is clear that the large and active Christian community in Wales was this Romano-British Church, and not a new foundation in the 5th cent. from Gaul. Why it was that the earliest Celtic Christianity did not at once employ the native artistic resources available is a question which cannot be entered on here; it is a fact, however, that the Celtic ecclesiastical art on stones and in metal and books, which flourished from the middle of the 7th cent. onwards, used motives that were not all originally Celtic, but are found also in 'Merovingian' work in Gaul and in that of the period of the Teutonic migrations in general, and hence it is reasonable to refer the great unfolding of Celtic artistic activity in this period to the impulse which came in from England and the Continent as soon as the conversion of the pagan Saxons opened the door once more to intercourse between Celtic lands and Western Christendom.

The following are the ornamental motives that occur in the decoration of the carved stones, the objects in metal, and the manuscripts: (1) the human figure, (2) leaf-ornament, (3) animals, (4) geometrical ornament, consisting in: (*a*) step- and key-patterns, (*b*) interlacing- or knot-work, and (*c*) spirals.

(1) Celtic art proper has no place for the *human figure*; and where this is treated in native fashion, as in some of the Irish manuscripts, it is reduced to a decorative pattern with no more resemblance to nature than have the figures on court-cards. Wherever the figure is reasonably well drawn or modelled, there influence from the side of classical tradition is at work. The best figures on monuments of at any rate partly Celtic character are those on the Ruthwell and Bewcastle Crosses, and they are accompanied here by vine-foliage enclosing animals which is of distinctly classical type. The High Crosses of Ireland, which date from the 10th cent., exhibit a remarkable display of figure-work which is all due to Continental inspiration, and need not here be described.

(2) *Leaf-ornament* is also foreign to the Celtic style proper. There is hardly a trace of it in the manuscripts, but it occurs very occasionally on the stones in the purely Celtic areas of Ireland, Wales, and northern Scotland. In the ancient Northumbria, on the other hand, it is abundant, and is clearly of classical origin, for the vine is almost always the motive employed. The vine scrolls on some so-called 'Anglian' crosses, such as that of Acca, now at Durham, and the one at Bewcastle, are as charming as any decorative foliage in existence.

(3) *Animals.*—Like the human figure, animals, such as the horse, the deer, the dog, occur, naturalistically treated in some abundance; and it is of course a well-established fact that the unsophisticated artist is always better at animals than at men. There are hunting and battle scenes on some of the crosses or their sculptured bases, and on a certain class of sculptured stones in Scotland animals are represented truthfully in a very telling and artistic fashion. There is nothing here, however, that is specially Celtic. On the other hand, the conventional treatment of animal forms for ornamental purposes is a very important element not only in Celtic, but in all northern decoration. There is no attempt in this to give the animal its specific character, or even to preserve elementary truth in anatomy and proportion. The creatures barely preserve so much zoological character as resides in the possession of a head and limbs, and their bodies are elongated and flattened till they are nothing but bands. All parts that can be extended, such as a limb, a tail, an ear, a tongue, a lip, are drawn out and twisted into elaborate convolutions, and are intertwined as if the artist wished only to produce the effect of complex knot-work. Though birds are sometimes introduced, the beast is generally intended to be a quadruped; but it is drawn out to such a length and tenuity as to justify the epithet 'lacertine,' or lizard-like, which is generally applied to it. There is no question which has been more discussed than that of the origin and history of this form of ornament among the Teutonic and Celtic peoples. The latest and most elaborate work on the subject, Bernhard Salin's *Altgermanische Thierornamentik* (Stockholm, 1904), favours the view that the animals in northern art are ultimately derived from classical models, but that the northern

peoples generally made the motive their own, and worked it out with extraordinary ingenuity and patience. A close comparison of the animal ornament in Irish manuscripts and metal-work and that on objects of Teutonic provenance indicates that Celtic zoömorphic forms are of Germanic origin. These forms are very rare in the Celtic decoration of the pagan period, and do not occur in Ireland, so that a foreign origin is in accordance with likelihood.

(4) In the *geometrical ornament*, in all its forms save the spirals, the same derivation seems now accepted.

(*a*) 'Step' patterns occur in the *cloisonné* settings of Teutonic jewels. Moreover, these patterns in the manuscripts, such as the *Book of Durrow*, are shown in white lines on a dark ground, and the background has been laboriously filled in so as to leave the lines the colour of the light vellum. There may be in this somewhat artificial process an attempt to imitate the damascening in lines of silver on iron, common on buckles and similar objects found in Germanic graves. 'Key' patterns, that is, patterns of a kind of which the Greek fret is typical, are very abundant both on the sculptured stones and in the manuscripts, but are not much used on metal. They are unknown in pagan Celtic work, and their prevalence in that of Christian date is probably due to Continental influence. The Celtic artist, however, showed his originality in that he turned these patterns obliquely, so that their lines are sloping instead of vertical or horizontal.

(*b*) The interlacing- or knot-work is so characteristic of Celtic decoration in Christian times, and is developed therein to such an incredible variety of forms, that it has been popularly regarded as a Celtic speciality. The work in question does not, however, occur in the decoration of the pagan period (or only in one or two doubtful examples), and in the Christian it is so far from being a Celtic speciality that it is the most widely diffused of all the forms of geometric ornament in the early Christian and early mediæval centuries. As Salin remarks,

'in the 7th and 8th centuries the general taste seems to have turned in this direction, for we find the work everywhere from Constantinople to Ireland, and find it, moreover, represented in the most diverse forms of art, in architecture, painting, the industrial arts. It even flourished in Asiatic and Africao lands wherever European culture had found admittance' (*op.cit.* p. 340).

The origin of the style is still a matter of controversy, and some derive it from basket-work, while others see in it the offspring of the plait or guilloche ornament, which is very common on the Roman mosaic pavements that were to be seen in all parts of the Empire. It is also a moot point whether the style of ornament, whatever its ultimate origin, was developed independently in different centres, or spread from one centre where its capabilities had at first been discerned. In any case the Christian Celtic peoples showed that they had a special affinity for the work, which they carried much further in artistic development than was the case elsewhere. It is especially abundant on the carved stones and in the manuscripts, as the motive is not so suitable for metal, especially when treated by the *repoussé* process.

(*c*) In the *spirals* we come to a form of ornament that is in a special sense Celtic, and is inherited by Christian Celtic art from that of the later pagan times. It is not classical save in ultimate derivation, nor is it Germanic in the broad sense, though it is very finely developed among the northernmost representatives of the Teutonic stock in Scandinavia. On the pagan metal-work of late Celtic times, in Britain, in Gaul, and in Ireland, it was treated with much artistic feeling for beauty of sweeping lines and for composition, and retains these same qualities when adopted for Christian use. Spiral ornament, however, as used in late pagan and early Christian Celtic art, is not quite a simple matter. On one side it is of immemorial antiquity. Spirals occur in Egyptian decorative art from about B.C. 2700 (if not much earlier), and were adopted from this source into the art of Mycenæan Greece, where we find them in Crete and at Orchomenus, Mycenæ, and other places in the second millennium B.C. At least as early as this they appear in southern Central Europe, as at Butmir in Bosnia, and thence the motive journeyed up the valley of the Danube and down those of the Oder and Elbe to Scandinavia, where we find it developed in the Bronze Age to the utmost possible perfection. From Scandinavia it is thought to have passed over North Britain to Ireland, where it appears carved on a great stone at the mouth of the pre-historic royal burial-place at Newgrange by the Boyne. In all these cases we have to deal with regular closely-coiled spirals, which look as if they were derived from the coiling of metal strips or wire, though there is evidence that they were first developed on stone. Now, in the later or Iron Age of Celtic art, spirals of a different and more elaborate kind become the predominant ornamental form, and produce what are sometimes called 'trumpet' patterns. These are formed by double lines which are coiled round each other and then diverge, so as to produce a shape like the mouth of a trumpet. These coils and expanded offsets are ingeniously connected together, so that they can be made in combination to fill with ornament any given space. It has been argued very forcibly by Dr. Arthur Evans that these late Celtic scrolls, which are sometimes called 'flamboyant,' are in fact derived, by a process of conventionalizing, from the 'honeysuckle' patterns or acanthus scrolls of Græco-Roman classical foliage. As used in Ireland and Scotland in early Christian times, the spirals are partly closely coiled and partly flamboyant, and we may regard them as representing a combination of these classical derivatives with the far older and more severe forms of the Bronze Age spirals, the origin of which can be traced to Mycenæan Greece and to Egypt. The use of this primeval motive for the purposes of Christian decoration is a fact of much interest, to which attention was called in a previous part of this article.

We are not concerned with archæological questions of origin so much as with those of the æsthetic use made of these various motives, and of the place of this artistic activity in the life of the Celtic Church as a whole. It has been well said by Dr. Joseph Anderson:

'From whatever source or sources the different elements of the composite style of decoration of the Celtic Christian period may have been derived, the style itself belongs specially to the period of the early Celtic Church in Scotland, Ireland, and Wales, with distinctively characteristic developments in each of these separate areas, and a modified extension into the area of the early Saxon Church, especially in Northumbria. In each of these areas it produced a remarkable development of monumental sculpture; and whether we regard the whole series of their manuscripts, metal-work, and monuments collectively as one great comprehensive manifestation of Celtic ornamentation of the early Christian period, or take them separately as national developments of a common style, it is equally true that, considering the work and the time, it presents a manifestation of artistic culture altogether unparalleled in Europe' (*The Early Christian Monuments of Scotland*, ci.).

The first point to notice about the artistic use of this decoration is the method of its distribution over the surfaces to be adorned. The ornament does not meander at will, but is confined to strictly defined spaces; and these spaces, which may be termed panels, are themselves arranged in a carefully thought-out scheme of composition. The finest examples of this are the pages devoted to ornament in the Irish manuscripts, and the large

cross-slabs which are best represented in Scotland.

ii. MANUSCRIPTS.—Of the Irish manuscripts now extant, the earliest is probably the *Book of Durrow*, and the most elaborate is the *Book of Kells*, both in the Library of Trinity College, Dublin; while the *Gospels of Corpus Christi College*, Cambridge, comes next in age to the former, and the *Gospels of Lindisfarne*, in the British Museum, is only second in beauty to the latter. This book, moreover, possesses the unique element of value that it is dated, and it supplies in this way a fixed point round which other examples not only in illumination but in metal-work and carving can be grouped. It was written within a few years of the date A.D. 700, and is earlier in style than the *Book of Kells* though not so early as the other two. Hence the *Book of Durrow* may be assigned to a date in the 7th, the *Book of Kells* to one in the 8th cent.; and it is satisfactory to know that Bernhard Salin endorses these dates as a result of his elaborate and detailed comparative study of the ornaments which occur in them. The decoration in these books is not more sumptuous and minute in its execution than it is clear and bold in its distribution. Leaving out of sight the figure-work, such as the representations of the Evangelists in front of their Gospels, in which classical models have been, however distantly, followed, and taking only the ornament, we find that the first word or two of each Gospel occupies a page, the initial letter spreading from top to bottom of it, and the rest of the letters of the first word filling up a good part of the folio. A border is designed to combine with the initial in framing the whole composition. If this page be a *recto*, the *verso* of the previous folio, which faces it as the book lies open, is treated as a sheet of pure ornament, the object being that the book shall present a sumptuous and beautiful appearance when placed open at the beginning of a Gospel on a reading-stand upon the altar. The scheme of design for such a page is generally based upon the form of a cross, which appears as the centre and support of a composition of variously-shaped panels filling the rest of the sheet. These panels, as has already been explained, are themselves filled in with patterns of the kinds above enumerated, while a border encloses the whole. As has been well shown by Mr. Johan Bruun, the general arrangement of these show-pages of initials or pure ornament provides spaces or panels varying in shape. Those which decorate or serve as complementary fillings for the big initial letters are often of curved outlines, while those connected with the cross opposite are commonly rectangular, or at any rate symmetrical in contour. In the decorative enrichment of these different fields, patterns of various kinds are selected.

'Spirals' (and we may add zoömorphic patterns) 'were chiefly used to fill in the irregular sections of the body of the letter and its curvilinear enclosed spaces, where, owing to a certain freedom in fixing the centres and making volutes of varying size, they were easily adapted and in keeping with the flowing outline of the margin. Interlacements were less easily adapted, but could be made to suit an irregular space, for instance, by forming a chain of knots of varying size and intricacy; whereas fret patterns were even more rarely used outside of the square or oblong panels, for which they were naturally suited. Thus the disposal of the various designs was ruled by taste, and effected the combination of contrasting elements in a graceful scheme' (*An Enquiry*, etc. p. 29).

We may connect this decision and self-control, in the matter of planning out and distributing enrichment, with the severity of the monastic discipline that prevailed in the Celtic monasteries, where this work had its home. The spirit of order and obedience to rule was as strong in the Celtic establishments as in those organized on the Benedictine plan, and the Irish regulars were not only among the most learned, but among the best-living in Christendom. And if we discern their mental rectitude and respect for law in these well considered and justly balanced schemes, in the actual execution of the ornament we are brought into contact with their intensity of devotion to the allotted task, and the infinite patience to which they were schooled by the seclusion and monotony of their daily existence. The little cells where once they sat at work are places as holy to the pilgrim of art as to the religious devotee, and we can realize there how this element of dainty loveliness in line and hue, this ingenious scheming, this minute accuracy in measurement, must have humanized and brightened spirits that might otherwise have become numbed in ascetic rigour, while an education of conscience must certainly have resulted from their scrupulous logic and exactness in pattern making. Prof. Westwood and other experts have examined Irish manuscripts with a glass 'for hours together, without ever detecting a false line or an irregular interlacement.' In the interlaced work, Mr. Romilly Allen reports that

'every cord laps under and over with unfailing regularity . . . and all the cords are joined up so as not to leave any loose ends. All the details of the spiral-work are executed with the minutest care, and there is never a broken line or pseudo-spiral. In the zoömorphic designs the beasts are all provided with the proper number of limbs and are complete in every respect down to the smallest detail' (*Celtic Art*, p. 256).

No mere description can give any idea of the variety, minuteness, and unfailing consistency of this decoration, which can now be judged of in accessible photographic reproductions, such as those in Stanford Robinson's *Celtic Illuminative Art*. As regards colour a word may be said, because it is noteworthy that the Irish scribe produced the effect of sumptuous splendour on his enriched folios without any use of gold, on which the Continental miniaturist so largely depended. This is at first sight surprising, for Ireland produced a good deal of gold; and this was not only used in her native metal-work, but, it is believed, exported to other lands such as Scandinavia. Trinity College, Dublin, possesses a magnificent and weighty gold fibula of native metal and workmanship, but the manuscripts in the library are destitute of gilding. The colours employed are not numerous, but yellow is largely used, and might have suggested to the scribe the substitution of gold. The reds, greens, blues, and purples are bright, clear, and harmoniously blended, but the best effect is gained by the free use of black, of which the scribe fully realized the artistic value. We may conclude on this subject with some words of Dr. Anderson, in which he speaks of the 'profusion of spiral, linear, and zoömorphic patterns arranged in symmetric and rhythmic designs shown up by contrasts of colour, and all carried to an extent of elaboration so bewildering, and yet so charming in the perfect balance and finish of its parts, that the more the result is studied, the deeper becomes the impression of its inimitable originality, grace, precision, and skill.'

iii. METAL-WORK.—The fine Celtic metal-work was, as we learn from some special cases, also a monastic craft in the hands of ecclesiastics. It was applied to the enhancement of the value of the manuscripts either at once in the form of covers, such as that adorned by Billfrith at Lindisfarne, or later on in that of the shrine or box, called in Ireland *cumdach*, made to contain and preserve the precious volume (p. 838[b]). These cumdachs are peculiar to Ireland. Shrines of a similar kind, also of a later date than the objects they were to protect, were made for the early hand-bells connected with the names of famous saints, which are in themselves objects of the highest interest, and may in some cases really have belonged to the saints with whom they are traditionally associated.

Their simplicity and even rudeness agree with an early date. The most primitive are four-sided, and made of plates of iron riveted at the corners. The later ones are of the same shape but of cast bronze, and these are sometimes ornamented. There are early bells of the kind in Scotland and Wales as well as Ireland, and Scotland has two bell-shrines, the rest being Irish. Celtic metal-work of early Christian date is perhaps most largely represented by the enriched penannular or annular brooches, of which the Tara brooch in Ireland and the Hunterston brooch in Scotland are the finest examples. As this article is concerned rather with things ecclesiastical, it may be sufficient to refer to four fine examples in this class, the Ardagh Chalice and the Cross of Cong in Ireland, and the Monymusk reliquary and crozier of St. Fillan in Scotland. They are all works of great interest either from the historical or the artistic side, and the first named is one of the most beautiful and elaborate examples of fine metal-work extant anywhere in the world.

The Monymusk reliquary is described by Anderson as 'a small wooden box' (it is about four inches long), 'hollowed out of the solid, and plated with plates of pale bronze and with plates of silver. . . . Its ornamentation is that peculiarly Celtic form of interlacing zoömorphic decoration, united with coloured designs of diverging spirals and trumpet scrolls, which are the principal varieties of the decorative art of the Celtic manuscripts and memorial stones of the early Christian time. It is jewelled and enamelled, and its engraved and chased designs are characterized by such excellence of execution that it must be early in date' (*Scotland in Early Christian Times*, p. 249). The special historical interest connected with the reliquary resides in the fact that there is some reason to believe it a relic of St. Columba, and a *vexillum*, or battle charm, which, like the Ark in ancient Israel, was borne out to battle with the Scottish host. It is preserved at Monymnsk House, Aberdeenshire. The crozier of St. Fillan is an example of a specially Celtic form of ecclesiastical object. It is really a shrine of fine metal-work, made in the shape of, and enclosing, the head of the pastoral staff of wood traditionally belonging to an early saint. The form of the crozier is exclusively Celtic, and differs from the form that such objects take on the Continent, and in the case of that of St. Fillan authentic history shows that it was employed as a relic on which oaths of a peculiarly solemn kind could be taken, while it is surmised that it was borne as a *vexillum* into battle at Bannockburn. It is preserved in a damaged condition in the Museum of Antiquities at Edinburgh.

The Cross of Cong, at Dublin, is the one surviving example of a processional cross of the early Celtic Church. It measures 2 ft. 8 in. in height by 1 ft. 6⅝ in. across the arms, and is 1⅝ in. thick. It is constructed of oak, and was supposed to contain at its centre, under a boss of rock crystal, a portion of the true cross. On the exterior it is all covered with metal plates of copper which are adorned with silver mouldings and plaques, with panels of fine gold work and gilded bronze, and with bosses of coloured enamel. The panels are ornamented with gold filigree work and zoömorphic patterns, and the effect of the whole is rich and artistically pleasing. It can be dated in the first half of the 12th cent., and is a striking proof of the long survival of fine artistic taste in characteristically Celtic work in Ireland. As a rule the later objects, such as the cumdachs and the bell-shrines, though the style of the enrichment remains the same, are comparatively coarse in execution, but the Cross of Cong has fine technical qualities.

Lastly, in the Ardagh Chalice we come back to the period of the most perfect design and workmanship, of about the 8th cent., and to a masterpiece of unique value. It is a large two-handled bowl on a low stem, and will hold as much as three pints of liquid. In its construction and ornament are employed no fewer than 354 distinct pieces, and the materials are gold, silver, bronze, lead, enamel, glass, amber, and mica; and the ornamental patterns include interlaced-work, step-patterns, key-patterns, spirals, zoömorphs, and scrolls, arranged in panels after the fashion represented in the manuscripts, and of the finest period of the style. What is chiefly remarkable about the chalice is not the elaboration or variety of its detail, but the almost classic nobility of its general design. As a rule, in all barbaric enrichment, whether Celtic or Teutonic in origin, the tendency is for the ornament to cover practically the whole surface of the object under treatment, while it is only very rarely that we find that contrast between plain and richly adorned passages on which so much of the effect of classical decoration depends. The chalice, like some other objects of the pagan period in the collection of the Royal Irish Academy, has an imposing largeness of style, due to the simple contours of the plain polished silver bowl, in contrast with the bands and medallions filled in with panels of delicate ornament and studded with bosses of variegated enamel. Not the least beautiful part is the flat plate on the under side of the base, which would be visible when the chalice was raised to the lips of a communicant.

Conclusion.—It has been seen that in the manuscripts all the kinds of ornament already enumerated are used freely in conjunction, while in the metal-work zoömorphs are conspicuous, and interlacing patterns are less used than the others. Turning now to the sculptured stones, we find interlacing patterns most prominent of all, so that they sometimes form the sole decoration of a monument. As the forms of the slabs or crosses differ in the various Celtic or Celticized districts, so do the kinds of ornament with which they are adorned. Decoration in tastefully distributed panels is everywhere the rule, and in Kells churchyard, Ireland, there is an unfinished cross, on which the panels are marked out and carefully squared, though there is no carving on them. The panels, however, are differently filled according to the localities. In Ireland, where the erect crosses are comparatively late, these show figure subjects greatly preponderating over ornament; and the same may be said of the free-standing Scottish crosses of the same type, though the subjects in Ireland are more generally Scriptural than in Scotland, where hunting scenes and the like are more common. In Wales and Cornwall, on the other hand, figure sculpture of all kinds is subordinate to ornament. In the matter of ornament, spirals of good design and zoömorphs are frequent in Ireland and Scotland, but are very rare in Wales and Cornwall, and, as far as spirals are concerned, in the Isle of Man. The Irish and Scottish stones have also as a speciality that kind of knot work where curved lines are most in evidence.

The varieties of interlacing patterns in Scotland and Wales are astonishing, and these have all been analyzed with extreme ingenuity and care by Romilly Allen in *The Early Christian Monuments of Scotland*, where the subject occupies 150 quarto pages. Since these slabs and crosses were, as we have seen, not so strictly ecclesiastical in character as the manuscripts and much of the metal-work, it is not necessary to postulate the monastic craftsman as in their case the sole executant. Yet the loving care and the single-minded devotion to a laborious task of which they give evidence are just the qualities which the monastic life developed in its votaries; and though the designer of some of the

elaborate cross-slabs of Scotland may have helped himself by appropriating compositions and motives from the manuscripts, yet he could never have carried out the work with such perfect execution had not his whole nature been brought into accord with the spirit that inspires it. Celtic art, as the expression on the æsthetic side of the fervour and intensity of a wonderful religious life, without which the Christian Church would have been greatly poorer, was a possession of the people at large, and is a democratic art practised alike by the unlettered mason and by the most learned scholars in Christendom.

LITERATURE.—For the whole subject, J. Romilly Allen, *Celtic Art in Pagan and Christian Times*, London, 1904, *Early Christian Symbolism in Great Britain and Ireland*, London, 1887, and *The Monumental History of the Early British Church*, London, 1889: for Ireland, Petrie, *The Ecclesiastical Architecture of Ireland*, Dublin, 1845; M. Stokes, *Early Christian Art in Irsland*, London, 1887: for Scotland, Joseph Anderson, *Scotland in Early Christian Times*, Edinburgh, 1881, and 2nd ser., Edinburgh, 1881. The art of the manuscripts can be studied in Westwood, *Facsimiles of the Miniatures and Ornaments of Anglo-Saxon and Irish Manuscripts*, London, 1868; Stanford Robinson, *Celtic Illuminative Art*, Dublin, 1908; and Johan Adolf Bruun, *An Enquiry into the Art of the Illuminated Manuscripts of the Middle Ages*, pt. i., Edinburgh, 1897. The best works on the carved stones of the various localities are, for England generally, *Journal of the British Archæological Association*, vol. xli.: for Northumbria, Greenwell, *A Catalogue of the Sculptured and Inscribed Stones in the Cathedral Library, Durham*, Durham, 1899: for North Riding of Yorkshire, *Yorkshire Archæological Journal*, vol. xix.: for Cumberland, Calverley, *Notes on the Early Sculptured Crosses, etc., in the Present Diocese of Carlisle*, Kendal, 1899: for Lancashire, Taylor, *Ancient Crosses of Lancashire*, Manchester, 1902: for the Isle of Man, Cumming, *Runic Remains of the Isle of Man*, London, 1857; Kermode, *Manx Crosses*, London, 1907, and *Catalogue of Manx Crosses*, Ramsey, 1892: for all parts of Scotland, Romilly Allen and Anderson, *The Early Christian Monuments of Scotland*, Edinburgh, 1903; Stuart, *Sculptured Stones of Scotland*, Aberdeen, 1856: for Wales, Westwood, *Lapidarium Walliæ*, London, 1876: for Cornwall and Devon, Blight, *Crosses of Cornwall*, London, 1858; Langdon, *Old Cornish Crosses*, Truro, 1896: for Ireland, O'Neill, *Sculptured Crosses of Ancient Ireland*, London, 1857; Petrie, *Christian Inscriptions in the Irish Language*, Dublin, 1872.

G. BALDWIN BROWN.

ART (Christian).—**Introduction.**—The limits of this article permit of the treatment of the subject only in one or two selected aspects. There can be no attempt to enumerate the various forms of Christian art, still less to trace out their history. For several of these, provision is made elsewhere in the Encyclopædia. The noblest and most important form of Christian art, architecture, furnishes the subject of a distinct article. Illuminated manuscripts are dealt with in next article. For an account of minor forms of Christian art, such as ivories, or ecclesiastical metal-work, information will be found in Dictionaries of Christian Antiquities, or in compendia like Dom Leclercq's recent *Manuel d'Archéologie Chrétienne*.

(*a*) *Scope.*—The scope of the present article must necessarily be a narrow one, and the main object of it is to take the most characteristic forms of Christian art as we meet with them in successive ages, and consider how far each of them expressed the religious ideal. In connexion with these historical phases we shall keep in view the two main questions: (1) that of the relation of art and the element of beauty generally to the religious life, and (2) that of the actual attitude of the Church at large, and of sections of it, towards art and beauty.

(*b*) *Definition.*—It is necessary to understand at the outset what is meant by 'Art.' To the majority of people a work of art means a picture or a piece of sculpture, and such works are generally regarded from the points of view of their resemblance to nature, and of the intrinsic character of the person or scene or object delineated. Art is, however, something far wider, and it is taken here to embrace the element of beauty wherever this appears in the works of man. The tasteful embellishment of buildings and of objects of utility is just as much art as the painting of a picture, and such decoration can be in the highest degree artistic even though the representation of nature plays little or no part in it. Where the representation of nature does form an important element in the effect of a piece, this may be a very beautiful and precious work of art, though the aspect of nature it presents is comparatively trivial, whereas a markedly inferior work of art, like some modern religious pictures of the 'Doré' type, may have for its theme a subject of the highest import. In this article the subject and the religious intention of a work are not reckoned as in themselves competent to give it its rank, and only those works are regarded as illustrating the subject of Christian art that express Christian ideas in an adequate and beautiful artistic form.

(*c*) *Misconceptions concerning Christian art.*—These considerations may help us to get rid at the outset of certain popular misconceptions, such as the notions that in early Christian days pagan art was deeply tainted with impurity; that the Christians were in consequence opposed to art, and that the earliest manifestations of Christian art assumed a symbolic or didactic character as a sort of apology or disguise. We must remember that there was an immense amount of art in the pagan world of a decorative kind that filled life with beauty, but did not obtrude upon notice any special representations of mythological personages. In cases where these personages were actually in evidence, there was, as a rule, nothing in the way they were displayed that would necessarily offend the eye. As a fact, the works of the Greek and Roman chisel and brush are so far from being tainted with impurity that it would be difficult to pick out from existing galleries of antique sculpture more than one or two works that are in any way suggestive or ignoble. Antique works compare quite favourably in this respect with those that figure yearly in European exhibitions of contemporary art. It is true we are told of some great painters of antiquity that they exercised their skill occasionally on licentious themes, but this is a fact also about certain prominent Italian painters of the Renaissance. As regards extant works of painting, apart from a few examples that were never meant for public view, we find nothing displayed on the plaster of Pompeiian walls that is not perfectly innocent. There is a class of Greek vase paintings that are marked by lubricity, but they were specially executed to suit the taste of the Athenian *jeunesse dorée*, and any one can see that thousands upon thousands of painted vases on view in the museums of Europe are as chaste as a child's picture book. A false impression arose when the Christian Fathers applied somewhat uncritically the OT category of 'idol' to the classical gods and goddesses, and were prompt to note the scandalous appearances these made in pagan literature. As the early Greek philosopher complained, the poets made the gods commit all the disgraceful acts repudiated among men, but the artists steadily refused to lend themselves to any such degradation of the religious ideal. In sculpture and painting the behaviour of these mythological beings is in almost every case exemplary. In their persons and conversation the artists exhibit nothing but what is ethically noble. Hence the spirit of pagan art, liberally interpreted, was not anti-Christian; and its forms might be adapted to Christian purposes without any marked incongruity.

Again, the existence of a vast number of works of art, often of an elaborate kind, dating from all the Christian centuries, is enough to show that there has been no general opposition to art in the

minds of Christians. There are, it is true, statements in the Fathers which have been interpreted as implying a condemnation of all forms of art. The statements are, however, primarily concerned with the making, embellishing, and setting forth of images connected with the pagan religion. This sort of work was naturally forbidden to the Christian, and Tertullian goes so far as to cavil at the making of the similitude of any natural object, on the plea that it might conceivably become an object of adoration. On the other hand, he points out (*de Idolatria*, ch. viii.) that the Christian artificer could properly exercise his craft on work which had no connexion with the pagan religion; and the 11th Canon of St. Hippolytus allows the craftsman to supply ordinary social demands for artistic work. Hence there is no reason to doubt that Christian houses were as pleasingly adorned, to the measure of the means and the taste of their owners, as pagan ones; but the art thus applied was of a light and decorative kind, not depending on formal pictures or statues, which probably would not make their appearance at all.

I. *EARLY TIMES.* — 1. Before Constantine. — The earliest existing examples of Christian art are applied not to houses but to burial-places, wherein the classical fashion is followed of giving them the same sort of adornment as the abodes of the living. The earliest known of these are decorated in much the same fashion as contemporary Roman tombs, such as the well-known ones on the Via Latina. The style is bright and cheerful. Pure landscapes are not unknown. Wreaths of fruit and flowers play a considerable part, and there occur also figure motives of a classical kind, in the form of winged genii, often engaged in vintage operations, personifications of the seasons, Cupids and Psyches, and the like, wherein the innocent classical convention of the nude is not wholly repudiated. To these purely decorative shapes there were added from the first certain others of a religious significance. The simplest of these is the Orant, a female figure with arms raised in an attitude of adoration. In the case of more distinctive personages, as the Canon of the NT was at the time only in process of formation, the representations are drawn mostly from the OT. Jonah is the favourite, and is evidently accepted, in the spirit of Mt 12^{40}, as the type of Christ. Moses striking the rock, Noah, Daniel, the youths in the fiery furnace, and Susanna, also occur, and the choice seems determined by lists of typical worthies of the Old Dispensation such as those in the Epistle of Clement of Rome to the Corinthians, or in liturgical documents such as the *Commendatio Animæ quando Infirmus est in Extremis.*

The figure of Christ appears early, but in a disguised form as the Good Shepherd, or as Orpheus who exercised a controlling charm over all living creatures. Occasionally He is presented in His own person, and the artist for preference chooses those scenes in which He appears as worker of wonders. The 'Raising of Lazarus' is specially favoured. Save in one exceptional scene of the 'mocking,' the suffering Christ does not appear, and still less the Christ crucified. Such are the characteristic subjects in the 1st and 2nd centuries, while occasionally in the 2nd, and more often in the 3rd, we meet with representations of a more or less doctrinal kind, such as the faithful round the table of the Lord, on which is placed for food the mystic fish, the symbol of Christ. It is remarkable, however, that historical representations from the actual life of the Church, especially scenes of persecution and martyrdom, are wholly absent.

About all this work we have from the present point of view to note: (1) that it is in the main decorative, the artist being more concerned to cover bare spaces and to dispose symmetrically his representations than to inculcate by them any doctrinal lesson; and (2) that classical influence remains strong, even when we have passed from the earliest period of almost exact correspondence between pagan and Christian decorative schemes. As Dom Leclercq has recently shown, many of the OT and NT figures are modelled on pagan types, while the earliest and best plastic representations of Christ as the Good Shepherd not only reproduce the familiar classical motive, but show a grace and elasticity in form and pose not unworthy of a fairly good period of classical art. Moreover, when Christ appears in His own person, He is represented as youthful and beardless, with something of the attractive comeliness of an Apollo. It is impossible in face of these facts to believe that there was any general sympathy among the early Christians with the extreme view expressed by Tertullian when he objected to any representation of figures or natural objects; or that there was any reason why Christians should turn with repugnance from the classical art that was all about them.

The OT and NT scenes that begin to appear in the catacomb frescoes of the 3rd cent. are repeated on the carved sarcophagi of the 4th and 5th. On some of these we find the same idyllic scenes of genii vintaging, the vine being, of course, in this case the True Vine, and the same semi-classic decorative motives which we meet with in the earliest frescoes; but the OT and NT scenes form the staple subjects of sarcophagus art, and Jonah, Abraham, Moses, and Daniel are seen side by side with Christ raising Lazarus, healing the blind, or touching with a magic wand of power the waterpots of Cana. If the crowning scenes of His life are touched at all, there is no attempt to deal with the deeper Christian mysteries of suffering and sacrifice. The march to Calvary becomes a triumphal procession, with the Cross borne forward as a banner; the crowning with thorns is envisaged as a royal honour.

2. After Constantine.—The next epoch of Christian art, after the time of Constantine, introduces us into quite a different atmosphere. Christianity has become the religion of the State, and confronts the world as a regularly constituted power. The artist needs no longer to hint but can assert, and there is demanded from him a certain amplitude and majesty in his work.

(*a*) *Mosaic art.* — The characteristic form of artistic expression for this period is the monumental mosaic. The artist's operations are no longer confined to the narrow limits of a burial chamber or the side of a sarcophagus. He has to cover with decoration the vast interior wall surfaces of the great basilican churches and the stately though much smaller baptisteries. His style changes with his task. If the bright unpretending catacomb pictures seem to have a literary counterpart in the personal expression of the lyric song, the severe and imposing mosaics possess a certain epic grandeur. The subjects of the mosaics are not, as a rule, historical or directly doctrinal, and there is the same reticence in the avoidance of those Passion scenes in the life of Christ in which He is represented as suffering or in humiliation. The aim of the mosaic artist is to present in majestic and simple forms the heroes of Christianity. It is not the adventures of the saints that attract him so much as the dignity of their presence as they stand forth triumphant after suffering—lords in heaven and earth. It is the Presence of Christ, rather than His mortal deeds and sufferings, that he strives to bring before the spectator.

The early Christian mosaics from the 4th to the 6th cent. at Rome and Ravenna are as great in their illustration of the principles of design as in

their technical excellence and their artistic beauty. They adopt in the main the principle of the world-famous frieze of the Parthenon at Athens, and offer an ideal presentation of actual scenes of which the building they adorn was the theatre. One of the earliest and quite the finest of the mosaics, that in St. Pudentiana at Rome, is in respect of its main scheme canonical. In the apse of that church the stately form of Christ enthroned as teacher occupies the central position, while on a lower level and on both sides of Him sit the twelve Apostles. The arrangement transfers to the heavenly sphere the appearance of the apse of the church at service time, when the presiding official occupied the throne in the centre behind the altar, with the attendant priests on the stone bench round the curve of the apse on either side of him. Christ, behind whom in the mosaic rises a jewelled cross on a hill in the midst of a city, Jerusalem, is the invisible ideal president of the daily assembly; the spirit of the Apostles is ready to inspire the clergy. The work, which may date within the 4th cent., is notable for the classical feeling in the characterization of the Apostles, reminding us of the heads in some of Raphael's cartoons. Equally dignified, equally well chosen, is the scheme for the decoration of the Baptistery at Ravenna of about A.D. 450. Here in the centre of the dome is a noble picture of the ideal consecration to ministry, the Baptism of Our Lord, at whose feet the gaunt but imposing forms of the twelve Apostles are preparing to lay down their crowns. More extensive is the display in St. Apollinare Nuovo at Ravenna, where the worshipper on entering sees represented in mosaic, on the side walls of the nave above the arcades, on the one side a portion of Ravenna itself, and on the other the suburb Classis, the port of the Imperial city. From each there issues a procession of saints, male on the right, female on the left, who are represented advancing towards the altar end of the church, bearing crowns which they will lay at the feet of an enthroned Christ and an enthroned Mary with the Child, at the end of the nave. Here again is idealized the bodily movement of the actual worshippers from the door of the church to its altar, or from their city homes to the heavenly mansions prepared for them afar, as well as the spiritual movement of the heart from earthly to celestial preoccupations. Above these processions, between the clerestory windows, stand single figures of white-robed saints, which carry out better than any others that could be named the idea before noticed of the monumental presentation of heroic forms of epic simplicity and grandeur. Highest of all comes on each side a series of historical pictures in mosaic from the life of Christ —the first example of such representations that Christian art has to show. On the one side there are scenes from the miracles and discourses, very simply but effectively designed, and showing the protagonist of the youthful Apollo-like type met with in catacomb art and on the sarcophagi. On the other side is what would be called in later mediæval times a Passion series, but the actual scenes of the final tragedy are as a fact selected on early Christian principles, with a truly classical avoidance of anything painful, or of any situation in which the Lord would be shown as suffering humiliation.

Thus there is no scourging, no crowning with thorns, no crucifixion, no taking down from the cross or burial, and the scene in which Christ, a heroic figure, is making a sort of triumphal progress towards Calvary, is followed immediately by that of the Marys at the empty sepulchre. In the pictures of this second series Christ is represented as older and is bearded, and the marked difference in His personality in the two closely related sets of pictures is enough to show that there can have been no authentic tradition of His actual physiognomy.

(*b*) *Historical or symbolic representation.*—From this same period of the 5th and 6th centuries we can date the beginning of the most conspicuous but not always the most artistic form of Christian art —the historical or symbolic representation, of an edifying and often a didactic character. There is an often quoted saying based on Quintilian, which occurs in many early Christian writings, to the effect that pictures are the books of those who cannot read. To the ecclesiastical mind this gave a religious justification for the pictorial embellishment of the walls of public buildings, which had previously been a matter of tradition inherited from classical practice. In the middle of the 5th cent. we find St. Nilus laying down the principle that the inner walls of a church should be covered with scenes from the Old and New Testaments from the hand of a first-rate artist, in order that those who are unable to read may be reminded of the Christian virtues of those who have served aright the true God, and be inspired to emulate them. In the 6th cent. Gregory the Great recommended the use of paintings in churches in order that the illiterate might behold upon the walls what they were not able to read in books. On this idea was based a scheme of decoration which remained in use throughout the mediæval period. At the altar end of the church was displayed the figure of Christ glorified, as teacher or judge, and the faithful were to be inspired by the sight to strive for the joys of Paradise. Along the side walls were exposed historical pictures from OT or NT or from the lives of saints, in which instruction as well as edification was provided for the unlettered convert. The subjects would be chosen, and the figures, actions, and details as a rule settled not by the artist himself, but by the ecclesiastical authorities. Gregory of Tours gives us a charming picture of the wife of a bishop of Clermont in the 5th cent. sitting with her Bible in her lap in the church, and directing the operations of a company of painters who are frescoing the walls. The western or entrance wall was not at first included in the scheme, but from about the 10th cent. onwards it was utilized for a display complementary to that of the glories of Paradise over the altar. This was the Last Judgment, often with the connected scenes of the separation and after-disposition of the souls of the just and of the unjust. In the later mediæval period the Inferno was made especially prominent, with the avowed intention of affecting the souls of the worshippers by salutary terror as well as by hope. Of the subject of Christ in glory the finest examples by far are in the early Christian mosaics, but the historical scenes were not displayed in adequate artistic form till the development of the Italian schools of mural painting in the 15th century. The most impressive rendering of the scene of the Last Judgment is in the 14th cent. fresco of the subject in the Campo Santo at Pisa, which used to be ascribed erroneously to Orcagna. The treatment here is truly dramatic and moving, and is marked by a fine reticence. Later representations of the theme, such as the famous ones by Luca Signorelli at Orvieto, offend through their over-insistence on the terror of the scene, and especially on the physical torments inflicted by the demons on the lost spirits who fall into their clutches. The ecclesiastical authorities may have thought it well thus to daunt the sinner and to harry the feelings of the impressionable, but the artistic result is nothing less than deplorable. Both in these scenes, and in the representation which became very popular of Christ suspended in suffering on

the Cross, the painters of the 12th and 13th centuries, especially in Italy, offend against all laws of good taste and of beauty, and prostitute art to the service of a gloomy religiosity.

From these false ideals representative art in the West was saved by certain religious revivals, embodied in Italy in the person of St. Francis of Assisi, and in Germany in the mystics of the school of Cologne. In both cases pictorial art showed itself responsive to the religious impulse, and the artistic revivals connected with the names of Giotto of Florence and Meister Wilhelm of Cologne have a distinct basis in the changed religious thought of the times. Before discussing the effect of these revivals of the 13th and 14th cents. on Christian art and on the life of the Church, we must turn back more nearly to early Christian times.

II. *MIDDLE AGES.*—The mediæval period had no sooner opened than the controversy on images (A.D. 726–842) divided the East and the West.

1. **Controversy between East and West.**—The opposition to all graphic and plastic representations of sacred personages on walls, panels, or portable objects, with which some of the Byzantine emperors identified themselves, was partly, no doubt, inspired by Islāmite examples, and was carried to such fanatical lengths as to involve the destruction of numberless treasures of early Byzantine art. The controversy ended in a compromise, according to which representations in colour or relief of Christ, the Virgin, angels, and saints were once more permitted on walls and on portable objects, though religious sculpture of a monumental kind never afterwards flourished in the Byzantine empire. For these representations, schemes were drawn up, and these were crystallized into books of artistic recipes, which have governed the practice of Christian art in the lands of the Greek Church all through their later history. The best known of these handbooks is that brought by the French archæologist, Didron, from the cloisters of Mount Athos, and published by him in 1845. It is known as the *Hermeneia* or *Book of Mount Athos*, and gives an impression of that fixity, not to say lifelessness, which characterizes representative religious art in Eastern Christendom, in such striking contrast to the mobility and variety of the forms of Christian art in the West.

It would be a mistake, however, to suppose that the Byzantine iconoclasts were opposed to the use of art in connexion with religion. What they revolted against was the religious reverence paid to sacred effigies, which became in a sense idols. As Woltmann has remarked, 'images had been introduced into churches first for ornament, teaching, and edification; but image-worship soon crept in unawares. The reverence for the Divine and spiritual being was transferred to the image, which was honoured with incense and obeisance' (*Hist. of Painting*, p. 195). Now, this reverence or idolatry was only a further extension, to the limit of an abuse, of the didactic idea, which the Church as a whole began in the 5th and 6th centuries to attach to representative art. Some of the Byzantine emperors most inimical to image-worship, such as Constantine V. and Theophilus, embellished the churches with decorative art in sumptuous materials, and in the simple conventional forms of the earlier catacomb period. In the West, moreover, it must not be supposed that the use of subject pictures with a view to edification was the only fact of importance concerning Christian art in the early mediæval epoch. No doubt the Fathers and bishops, who patronized pictures as the books of the illiterate, thought they had accomplished a good work in moralizing art and in setting it to ecclesiastical service. They believed that they had avoided by these means the danger latent in art in respect to those who might be tempted by the lust of the eyes, and they were at the same time apparently unconscious of the danger on the other side of reverence for these sacred effigies passing into the idolatry of which the iconoclasts accused the Christians of the West. These Fathers and bishops, in the view they thus adopted about works of art, were not regarding the matter from an æsthetic, but rather from a doctrinal standpoint; but we are fortunate in possessing mediæval productions that do not depend for their artistic value on anything that they represent, and also expressions of mediæval opinion that are more satisfying to those æsthetically minded.

2. **Theophilus on Art.**—Among the most interesting documents that have come down to us from the Middle Ages is a certain technical treatise on artistic processes, written about the year A.D. 1100, by a German Benedictine monk whose name in religion was Theophilus. The author, a practical expert in fine metal-work and other artistic processes and materials, has prefixed to the three books into which his treatise, called *Schedula Diversarum Artium*, is divided, Introductions in which he discourses at large on the whole question of art and the cultivation of the beautiful as a part of the religious life. The view Theophilus advances is almost startling in its breadth and sanity, and gives the modern reader a very pleasing impression of monastic culture, which he will probably have been taught to believe was slavishly narrow and ascetic.

Theophilus bases his apologia for the practice of the arts on the part of those vowed to the religious life on a view of human nature that can be thus paraphrased:

> Man was made in the image of God, that is, as Theophilus implies, in the similitude of the Divine Artist who fashioned the world, and he is bound to make his resemblance to the Divine as real and effective as he can. It is true that by the machinations of the evil one this Divine image in man was obscured at the Fall, but it was not so far effaced that man cannot through care and thought win back something of the ancient heritage of art and of learning. 'Wherefore,' he writes, 'the pious devotion of the faithful should not neglect the knowledge which the prudent foresight of our predecessors has handed down to us, but should embrace it as an inheritance from the Almighty.' As such it is not the private possession of any one individual, but is a trust from God, which the skilled person holds for the benefit of his fellows. For which reason, Theophilus declares, he is ready to offer to all who desire humbly to learn, as freely as he has himself freely received it, all the gift of the Divine grace—this gift being the knowledge of the technical processes of the arts which he then goes on to unfold. In another place he discourses in the same strain, and urges the artist to 'believe that the spirit of God has filled his heart, and will direct him by the seven gifts of the Holy Ghost.' He then explains that these seven gifts embrace the special qualities of skill and taste and industry which are requisite for the practice of the arts. The spirit of Wisdom teaches that God is the creator of all things, and without Him there is nothing—this is the primal lesson. Next, the spirit of Understanding gives to the mind the capacity for discerning the right order, measure, and distribution of parts which should be applied to the work in hand. The spirit of Counsel teaches us not to hide the talent which has been given us by God, but to display it openly, with all humility, in word and act before those who are desiring to learn. Through the spirit of Might the craftsman will throw off all the torpor of idleness, and will begin his work with vigour and carry it through with all his energy and power to the end. The spirit of Knowledge, which has been granted to him, has filled his mind with abundant stores, over which he presides, and which he must produce with all boldness before his fellows. By the spirit of Piety he will rightly judge upon what object, for whom, and when, and how much, and in what manner he shall spend his labour, and will guard against the insidious inroads of avarice and greed by a most scrupulous moderation in estimating the value of what has been done. Finally, as the great lesson of the whole, the spirit of the Fear of the Lord will remind him that he can do nothing of himself, that all he possesses or desires comes from God, and that he must ascribe to the bountifulness of the Divine mercy all that he knows, or is, or hopes to be.

3. **Art in the monasteries.**—The existence of artistic practice as an institution of the cloister may in itself surprise, for it seems to us moderns to belong to a side of life from which the ascetic recluse would turn rigidly away. We may, how-

ever, repeat here what was intimated in connexion with the fact, to some almost equally surprising, that artistic practice existed among the earliest Christians. Art, regarded as an element of beauty attaching itself naturally to the works of men, and touching life at every point, the modern cannot readily understand, because with us this element of beauty is something artificial and extra, for which we have to make a special effort. This was not the case in old time, when it would have needed a special effort, not to *procure*, but to *exclude* this element. The earliest Christians decorated their tombs, the Christians after Constantine their churches, because not to do so would have been a forced act, for which, as we have already seen, there was no real reason. The artistic tradition, thus maintained from the first by the Church at large, was in Eastern Christendom never broken, and the Greek Church, while stereotyping the forms of its expression, has held it continuously in honour. In the West the Teutonic inroads broke up the fabric of antique culture; but though the classical tradition in art was thus in a measure severed, the barbarians were in their own way just as artistic as the Greeks or Romans, and the mediæval civilization of the West, partly classical and partly barbaric, derived its art from both these sources. Hence, when communities of monks and nuns were formed, alike in the Celtic and the once-Romanized parts of the West, the arts quietly made their appearance within the hallowed enclosures. A monastery, it must be remembered, was in theory self-supporting, and all sorts of operations in husbandry and in the mechanical crafts had perforce to be carried on by the inmates, whose bodily and mental health was greatly improved by the exercise. Of the Celtic monastery at Bangor, near Chester, Bede tells us that the two thousand inmates all lived by the labour of their hands. The rule of St. Benedict, in the 6th cent., provided that when artizans entered the Order they were to be allowed to continue working at their crafts, though they were not to take any personal pride in their productions. The quiet and order of a monastery must have been congenial to the artist, and Ordericus Vitalis tells us that, when the founder of a certain monastery in the 12th cent. invited all who joined it to continue the practice of the arts to which they were accustomed, 'there gathered about him freely craftsmen both in wood and iron, carvers and goldsmiths, painters and stonemasons, and others skilled in all manner of cunning work' (*HE* viii. 27).

The mere practice of the various crafts, artistic as well as utilitarian, in the mediæval convent is, however, one thing, and the religious enthusiasm with which Theophilus seems to regard artistic pursuits is quite another. It is this that constitutes for us the interest of the *Schedula*. The religion of the writer was evidently sincere and fervent, and it seems to him to find a natural, even a Divinely ordained, outcome in art. Though Ruskin and other eloquent modern writers have descanted on the praises of art from the moral and religious standpoint, there is a breadth and dignity about the thought of the 11th cent. monk that puts him above them all. There is, indeed, no more effective apology for the cultivation of art than this simple reminder that the love of what is beautiful is a part of human nature, or, if we take still higher ground, the more august assertion that the creation of what is beautiful is part of the law of the universe at large.

'Look around you,' we can hear Theophilus saying in effect to his hearers, 'and survey the fabric of creation. It is the work of an artist, of the Supreme Artist who has made all things beautiful in their season. He has gifted you too with a portion of His own nature and has formed you an artist, and you are bound in service to Him to exercise your creative power and make the most of your affinity with what is beautiful. In the name of religion take up the brush and tools and mallet, and spare not cost or labour till the House of God that you build shall shine like the very fields of Paradise.'

These last words are used by Theophilus in a passage in which he foreshadows the concrete realization of the creative effort in the microcosm of an Abbey church, which is an image of the vast macrocosm of the universe. The church, he says, is to be so decorated on ceiling and walls as to present the appearance of the Heavenly Garden. It will seem to be blooming with all kinds of flowers, and green with leaves and grass, like the celestial fields where the blessed ones receive their crowns. The ceiling will be flowered like an embroidered robe, the wall resemble a garden, the windows send in a flood of variously coloured light. After the decoration of the fabric will come the provision of fittings and apparatus, including all the vessels for the service of the sanctuary, the construction and varied embellishment of which he describes in the technical chapters in the body of his treatise. There, in the workshop and among the appliances and tools which the monkish craftsman has to build and fashion for himself, we are invited to see the gold and silver and bronze, the coloured earths, the glass stained with metallic oxides, all taking shape in dainty and beautiful forms, till the mere matter, the raw material, has become spiritualized through its consecration, in a shape of beauty, to the service of the Most High. For with Theophilus the preoccupation always is with the technical manipulation of the material so as to compass an effect of beauty. From end to end of his treatise there is comparatively little about art as representative. The art he contemplates is decorative. It is not the kind of art that corresponds to the more prosaic vision of the Fathers and bishops, to whom the lessons to be drawn from the presentation of holy persons and scenes make up the chief value of art. He is, of course, aware that the beautiful forms he conjures into life under the hammer or by the glass-kiln represent something in nature, or have, at any rate, some symbolical import; but these considerations trouble him little, and, after describing some technical process, he often tells the worker to make with it 'what you will.'

The representative element in mediæval art must not, however, be ignored. Theophilus decks the walls and ceiling and windows of his church with the gaiety and colour of a garden, but he has in his mind the regular scheme of figure design for a church interior. On the walls will be displayed, he suggests, the Passion of the Lord, touching the heart of the worshipper, or the suffering of the saints will be movingly depicted. If the joys of heaven are displayed at one end of the building, and at the other the torments of the regions of the lost, the spectator will take hope from the thought of his good actions, and be terrified at the remembrance of his sins.

Though Theophilus troubles himself little about symbolism, there was no doubt a symbolical intent in many of the decorative forms employed in mediæval art. On this subject a word must be said, because it is one that is often misunderstood. There is no mystery about Christian symbolism, because it is almost entirely based upon Scripture. We are familiar in the OT and NT with figures in which animals and plants stand for personages and qualities, and know that there is little consistency in the use of these. Thus the lion is at times a type of Christ, as the 'lion of the tribe of Judah'; but at other times he may represent the evil one, who, 'as a roaring lion, walketh about, seeking whom he may devour.' In plastic or graphic art the lion may conceivably stand either for the ideal of good or the ideal of evil; but there is commonly, too, a third alternative, that the creature is purely ornamental, and may have been copied as a mere decorative motive from some indifferent source, such as an Oriental figured stuff. The whole subject of SYMBOLISM is dealt with in another article, and it is mentioned here only for the sake of warning the reader against imagining that it played any but a secondary part in mediæval design. The fact is that in every age the artist, as artist, has little care for these intellectual refinements, and it is because Theophilus is so true an artist that he troubles his reader but little with this subject. The artist's instinct is to make his work tell out at once with directness and force, and he does not desire to give the spectator the trouble of spelling out obscure allusions. The artist, however, as we have seen, often worked under the orders of theologians or of those who took a religious and literary interest, rather than a purely artistic interest, in the works produced. Such patrons might prescribe schemes of symbolism which the artist was quite willing to carry out.

The difference was that, while the theologian saw, in the shape, say, of a dragon, a reference to some allusion in the Apocalypse, the artist took a disinterested pleasure in the creature because its wings and tail were so effective for filling awkward spaces in the field of his design. Again, the persons here in view, in studying works of art already done, would find out all sorts of recondite suggestions in details which, in their origin, had probably a purely artistic purpose. In this way there came into existence in the 13th cent. the extensive work of Durandus, bishop of Mende, called *Rationale Divinorum Officiorum*, in which an elaborate symbolical interpretation was given of all the parts and fittings of the church and the apparatus of the altar. In this way, too, beast forms in art were credited with moral and religious meanings that were interpreted according to schemes of beast symbolism embodied in the so-called *bestiaria*. That beast forms in mediæval art were commonly symbolical is, however, rendered extremely unlikely by the fact that reforming churchmen of puritanical tendencies are found inveighing against such motives as barbarian and frivolous. The *locus classicus* occurs in the writings of St. Bernard, in the 12th cent., who protests against the foolish and wasteful display of these monsters on carved capitals and friezes, without any suggestion of their supposed religious significance. A later writer draws a distinction between pictures of the sufferings of Christ and the martyrs, which he praises as 'books of the laity,' and animal representations, for 'what have lions to do in a church, or dragons, or all the rest of these beasts?' (Schnaase, *Geschichte der bildenden Künste*, iv. 272).

These passages draw attention to the fact, which must not be passed over, that within the monastic system itself there was not perfect unanimity in regard to this lavish display of art in connexion with religion. There was a puritan vein in monasticism that led to protests against what was regarded as over-exuberance in the use of the element of beauty in the furnishing forth of sacred structures. The so-called reformed Benedictine Orders, beginning with the Cluniacs of the 10th cent., took, as a rule, this view, and a striking illustration of its working is to be found in the attitude of the Cistercians towards stained glass. The magnificent display of colour and imagery in the noble French storied windows of the 12th and 13th centuries, such as those at Chartres, they considered too sumptuous for the House of God, and substituted geometrical patterns in grey and yellow. Figure sculpture on the façades of their churches they also repudiated. It is, however, significant of the hold that art had obtained over the religious community in this advanced mediæval period, to note that there was no real opposition to art even among the severest of the reformed Orders, for Cistercian architecture, as the ruined abbeys of England sufficiently prove, though sparingly adorned, is of extreme beauty, and its ornamentation, with conventional foliage, of the utmost delicacy and grace.

4. Gothic Architecture.—We find, then, in the *Schedula* of Theophilus the conception of Christian art as a display of beautiful things carefully and cunningly wrought, that were offered as the homage of the mortal artificer to the great Artist of creation. This conception was actually realized, with a completeness and splendour of which a monk of the 11th cent. could have no idea, in the fabric and fittings of the French Gothic cathedral of the age of St. Louis. This is the most perfect embodiment of Christian art that the world has seen, because the representative element, though present and recognized as it was by Theophilus, was subordinate to direct artistic expression, first in the forms of the architecture, and next in the sumptuous display of detail and colour in the stone and wood carvings, the gilt and enamelled shrines, and, above all, in the 'storied windows richly dight' that are the glory of the Gothic fane. The subject of Christian architecture receives separate treatment, and it is necessary here only to emphasize the natural and obvious symbolism of the forms of Gothic architecture, which raises the soul in aspiration, while the sense of mystery, of the beyond, is instilled by its multitudinous elusive details, its perspectives, its magic of light and shade. Of the general artistic effect of these vast structures at the time of their glory, when the interiors, often now so cold and bare, were glancing with gold and colour, and were hung with gorgeous Eastern stuffs, we can form but an imperfect idea; but it is probable that nothing more artistically beautiful has ever been seen. The spirit of the work was still the spirit of the earlier religious decorative art of which we read in Theophilus; that is to say, it was impersonal work, unmarred by any touch of personal display so common in Italian art, simple and sincere in intent and in execution, and offered in an act of devotion for the service of the sanctuary. The representative element was at the same time present in the art, but it kept its place as on the whole subordinate to the general decorative effect. For that very reason we find in it a charm which more advanced representative work has often lost. It is the charm of *naïveté* and freshness due to the artist's unsophisticated delight in nature, and at the same time to the clearness of his mental vision, which gives him ease and assurance.

The decorative figure sculpture on the great French cathedrals, such as Chartres, Amiens, and Rheims, is really one of the most perfectly satisfactory forms of Christian art. It is a direct expression of the thought and feeling of the Gothic epoch, as they were embodied in the character and work of St. Louis, the typical man of his age. In St. Louis mediæval religion took on a new character, for his was no cloistered sainthood, of what may be termed a professional type, but the sainthood of a man versed in secular affairs though viewing them always from the standpoint of a childlike but cheerful piety. The forms of Christ and of Mary, of the Apostles and prophets, of saints and of angels, that cluster about the spreading portals, or take their stand in niches and on pinnacles on the upper stages of the buildings, are so fresh in their naturalness, so graceful and elastic in pose, so full of brightness and tenderness in expression, so pure and holy of aspect, that we feel that we never met with a company that seemed to realize better what is meant by 'the body of Christian fellowship.' On the intellectual side we trace in the figures and reliefs the working of ideas beyond the mental horizon of the carvers who actually achieved the work. At Amiens, for example, the subjects in the reliefs on the pedestals that support the noble figures of the Jewish prophets, on the western front, are drawn from the prophetic writings, and evince a knowledge of the Vulgate text that betokens the trained theologian; but if we take the sculpture as a whole, we cannot doubt that the minds of the carvers were just as alert as their hands, and that the qualities in the work which we most admire are due not to the ecclesiastical directors of the undertaking, but to the devotional feeling, the sense of beauty, and the freshly kindled love of nature, that in the France of that favoured epoch were so widely diffused throughout the community of artificers. It needs hardly to be said that the same qualities mark Gothic sculpture in other lands, and they are very apparent in the beautiful recum-

bent effigies in stone or bronze in which English craftsmen of the 14th cent. achieved so much success. The 'Queen Eleanor' of Westminster Abbey and the 'Edward II.' at Gloucester are among the best of these. English and German churches of the period are adorned with beautiful decorative sculpture, but the display is on a far smaller scale than is the case in central France.

We turned away from representative art in the West at a time when it was dominated by a somewhat gloomy view of religion, and exercised itself largely on subjects which, like the crucified Saviour, laid stress on physical suffering. This applies chiefly to Italy, where in the early part of the 13th cent., while French and English Gothic art had unfolded itself in forms so varied and beautiful, little was being produced but unattractive and coarsely executed pictures, on which the historians of Italian painting lavish all the terms of depreciation they can muster. The Gothic spirit is one of humanity and brightness, and it was the spread of this from central France to Italy that led to the revival of art in the Peninsula. This Gothic spirit became incorporated in St. Francis of Assisi. As Sabatier puts it:

'St. Francis is the friend of nature; he is the man who sees in all creation the work of the Divine goodness, the effluence of the eternal beauty . . . hence at the voice of the Umbrian reformer Italy began to recover herself; she found again her sound sense and her good humour: she put away those ideas of pessimism and of death as a healthy organism gets rid of the principles of disease. . . . Lifting himself as by the stroke of the wing to the religious life, Francis caused suddenly to shine forth before the eyes of his contemporaries a new ideal, in presence of which there disappeared all those strange and perverted sects, as the birds of night fly before the first rays of the sun' (*Life of St. Francis*, London, 1907, p. 45).

The beneficent influence of the genial creed of St. Francis on the revival of Italian painting is well understood, and in Giotto and Simone Martini, who at Florence and Siena respectively represent the coming in of the Gothic spirit of humanity and tenderness, we find this influence at work. It is worth noting also that a similar influence at a rather later date was exercised upon painting in Germany, and led to the beautiful art of the early school of Cologne. German representative art has often shown a tendency towards what is grotesque and terrible, and the popular early Dances of Death, or of the dead, are proof of this. In marked contrast to this tendency we find at Cologne in the last part of the 14th and beginning of the 15th cent. a school of painting marked by the most delicate idyllic grace and tenderness, and by a pure devotional feeling that few Italian pictures can match. The art is really inspired by the so-called German mystics or 'Gottesfreunde,' a body of men who without forming any sect or order felt themselves impelled to a religious life of more intense zeal than was shared by their fellows. Still remaining, like the early Franciscans in Italy, true sons of the Church, they sought to make religion consist in a more intimate personal relation between the soul and God. When this relation was established, the soul became entirely filled with an ecstatic love that was not only the love of God but also the love of one's neighbour, so that the perfectly holy man, it was said, might desire the Kingdom of heaven for his fellow-man even before himself. In this mood the mystics were visited by visions, but visions that presented only forms of beauty. The fantastic and the grim, which have exercised such fascination over the Northern imagination, seldom appeared before the eyes of Heinrich Suso or his fellow-seers, but their dreams were of lovely sights, of flowers, and even of celestial maidens to whom they were fain to offer adoration. Schnaase was perfectly right in connecting with this religious revival of the 'Gottesfreunde' the Cologne school of idyllic religious painting associated with the names of Meister Wilhelm, Hermann Wynrich, and Stephen Lochner, the painter of the famous 'Dombild.'

5. Development of Christian art from the 13th to the 16th century.—We thus see in Italy and in Germany alike that the artistic revivals of the late 13th and 14th cents. were preceded by and based upon certain religious movements that set in in the direction of humane and tender feeling. The influence was essentially the same as that which formed the inspiration of Gothic art in France in the century before; but whereas Gothic art is mainly decorative, we begin at the end of the 13th cent. to watch the development of painting and sculpture on their representative sides till they become capable of expressing the deeper emotions with dramatic force and verity. Up to this period the artist had never disposed of adequate means for the representation of nature. However pure in feeling, however devotional, had been the art of the catacombs, or of the monastery, or of the Gothic church, however noble the single forms, however lively in action the groups, in the mosaics or in the historical pictures from the lives of Christ or of the Saints, the delineation was always summary, the rendering of light and shade and perspective crude or faulty. From the time of Giotto onwards two centuries are occupied with the development of painting and sculpture on the technical side, till they become in a true sense mirrors of nature and clear expressions of artistic thought. This is the epoch of what would be called *par excellence* Christian art, and lies between the end of the 13th and the close of the 16th cent. in Italy, between the end of the 14th and the middle of the 16th in Germany and Flanders. From Giotto to Tintoretto in the one case, from the early Cologne masters to Quinten Massys of Antwerp in the other, painting and sculpture are Christian, in the sense that religious themes are preponderant, and that spiritual ideas are conveyed in a more or less distinct and convincing form. It would be a mistake, however, to use the term 'Christian' of this art in too absolute a sense, for the power which the artist gradually obtained over his materials he exercised on a realistic rendering of nature that resulted in a progressive secularizing of the spirit of the art, while the influence of the classical Renaissance of the 15th cent. acted potently in the same direction. All through the periods indicated, however, art that was in a strict sense Christian was being produced, though not by every artist, nor, with certain exceptions, by any artist at every time.

The lives and works of the leading representatives of art in the periods indicated are so familiarly known that it will be sufficient for the purpose of this article to indicate in a few sentences the most prominent instances in which these artists embodied distinctly Christian ideas in their productions.

(*a*) *Italian Schools.*—The artists of the school of Florence, with the exception of one or two of pronounced devotional feeling, such as Fra Angelico and Luca della Robbia, with others like Lorenzo di Credi and Fra Bartolommeo who were directly influenced by the revivalism of Savonarola, took their subjects as a rule from the human side, and are noted for characterization and for the dramatic presentation of scenes of interest rather than for pious preoccupations. These scenes are of a sacred character, but they are generally envisaged in their human aspects, as is notably the case with the greatest of the early Florentines, Giotto and Masaccio. Some of Giotto's scenes from the Passion of Christ at Padua, and Masaccio's magnificent designs in the Carmine at Florence, are in the truest sense spiritually elevating; but the effect is that of the sublime in art generally, and they are com-

parable with fine scenes in Shakespeare or Æschylus rather than with religious discourses. The same applies to some of the technically perfect achievements in religious art of the masters of the 16th cent., who bowed before Masaccio's genius in creation though they disposed of far more advanced technical science in execution than he could pretend to. The most notable of these works from this ethical standpoint are **Leonardo da Vinci's** 'Last Supper' at Milan, **Michelangelo's** frescoes on the roof of the Sistine Chapel at Rome, some of Raphael's less academic compositions, numerous religious pieces by **Titian** and by **Giovanni Bellini**, and the largest part of the work of **Tintoretto**. The single figures by these masters have the epic grandeur of those in the finest Christian mosaics, though we see them no longer in monumental repose, but alert and mobile and actuated by noble passion. The sacred scenes in which they figure are re-constructed on an intelligible scheme, though the deliberate intention of all the actions and details is often so much in evidence that we are chilled by a certain made-up look in the composition. The Venetians are more successful than the Florentines or Raphael in giving to these scenes a convincing air of reality, because they see them from the first as a whole instead of building them up piece by piece in conscious fashion. Perhaps the best of all these masterpieces for its direct religious impression is Titian's comparatively unpretending picture at Dresden known as the 'Tribute Money.' Christ, tempted with the insidious query about the lawfulness of paying tribute to Cæsar, has asked to see the penny, which is brought to Him by His interlocutor, and the painter has emphasized the contrast between the noble, and at the same time tender and sympathetic, lineaments of the Lord and the screwed-up cynical features of the weather-beaten Pharisee who peers cunningly into His countenance. The hand of Christ, one of the most beautiful in art, contrasts effectively with the gnarled paw that is holding out the penny at which He points. The realization of the Christ of the Gospels and the creation of the adequate and beautiful type represent one of the triumphs of pictorial art. The imaginative power shown in some of Tintoretto's vast sketches in oil, from religious themes, in the Scuola di San Rocco at Venice, has never been equalled, and Raphael's cartoons are in comparison cold and academic. The great 'Crucifixion' of the former artist at San Rocco, and the 'Christ before Pilate' opposite to it, are sublime creations.

The Italian painters of the first rank may be said to transcend the limits of an art that may technically be termed 'Christian,' and to present the sublime of human nature in such a way as insensibly to raise the mind of the spectator to Divine things. There were, however, many artists of the second order whose devout feelings found a more direct expression in works to which the adjective just used may with strictness be applied. The typical artist of this order was **Fra Angelico**, but the same spirit that animates his holy and beautiful paintings runs through the productions of the early Siennese and early Umbrian schools as a whole. Angelico's religious frescoes in the cells of the dormitory at San Marco, Florence, afford us the most perfect example of an art wholly devoted to the purpose of lifting the soul of the beholder on the wings of aspiration. Every figure, every composition, was a warning to leave the scenes of earth, and to join the celestial company around the Risen Christ, whose visionary form he constantly portrays. There is more power, more intensity, in his work than in that of the Sienese and early Umbrian painters, who in purity of soul and in simple piety are his counterparts. To match the religious design of Angelico, we must pass over a generation of artistic advance in technique, when we find in the fully accomplished painting of **Francia** and of **Luini** a devoutness equal to his own, joined with powers of execution to which he could lay no claim. The well-known 'Pietà' by Francia, in the London National Gallery, is a perfect piece of religious art, while the fragments of Luini's frescoes have filled the corridor of the Brera with some of the loveliest shapes of virgin and saint and angel that Christian art has to show.

(*b*) *German and Flemish Schools.*—Turning now from the religious art of Italy to the work of the early German and Flemish schools of the 15th cent., we find the fresh and innocent idyllic design of the early school of Cologne soon beset and overcome by the realism and the ugliness to which northern art has all along been ready to surrender itself. Out of this at the beginning of the 16th cent. **Albrecht Dürer** with difficulty fought his way, and created an art in which deep feeling and philosophical thought triumphed over the characteristic defects of Teutonic design. Many of Dürer's religious pieces, especially those representing the suffering Christ, are profoundly impressive, and were recognized by the Italians of his day as possessing qualities in design superior to those of their own productions. Dürer's finest works, however, such as the picture of the four Apostles at Munich, and the world-famed engravings 'Melancolia' and 'The Knight and Death,' are, like Michelangelo's 'Prophets' in the Sistine chapel, ethically great but not inspired by any sentiment that is distinctly Christian. It is worth notice that though Dürer remained all his life a mediævalist and a faithful son of the old Church, he held strong views about Papal abuses, and expressed the greatest admiration for Luther and some others of the Reforming party. We find proof of this in his writings as well as in some of his paintings. Once he addresses Erasmus as the 'Knight of Christ,' and bids him 'ride on by the side of the Lord Jesus.' There is a reference here, no doubt, to the figure in his own 'Knight and Death.' We find it hard to imagine Erasmus in mail and on a war-horse, and Luther's would have been a better name to invoke! The 'Four Apostles,' in the exaltation of Paul and John over Peter, betrays Lutheran prepossessions. In much of Dürer's work the German infatuation with the weird and terrible interferes with our æsthetic pleasure in its contemplation, but his woodcuts from the Apocalypse, where these qualities were in place, are charged with imaginative power. The pictures of the early Flemish religious painters, on the other hand, though in artistic rank they do not equal the masterpieces of Dürer, perpetuate in some degree the idyllic charm and tenderness of the early Cologne masters, while in the work of **Rogier van der Weyden** and some others there is distinct devotional intent. With regard to the founders of the school, the brothers **van Eyck**, we are in this difficulty: the known pictures of the younger, Jan, are on the whole realistic and secular, but there is a deeper note struck in the great altar-piece in which both brothers collaborated, the 'Adoration of the Lamb' at Ghent; and whether or not this is due to the profounder nature of the elder brother, Hubert, is one of the unsolved problems of modern painting. This school culminates and ends with the work of **Quinten Massys** of Antwerp, who died in 1530, and whose two fine triptychs, in the Museums of Brussels and Antwerp, exhibit the one a charming idyllic feeling, and the other, in the representation of the subject of the 'Pietà,' a dramatic power and pathos that make it a worthy last word of the early religious schools of painting north of the Alps.

Before passing on to the subject of Christian art under Protestantism, a few words may be said as to the later developments of religious painting on the older or pre-Reformation lines. We have seen that such painting in the Italy of the culminating period of the art tended to assume the form known as 'Academic,' in which sacred scenes and personages are represented in a somewhat 'made-up' fashion, and fail to impress us with any sense of reality and power. This form of religious art maintained itself through the 17th and 18th cents., especially, of course, in Catholic countries, but not in these alone. In Spain, though the greatest master of the age, Velazquez, rarely exercised his genius on religious themes, painting of an ecclesiastical kind was necessarily much in evidence, and Murillo (1618–1682) is a very prolific and, on the whole, sympathetic representative of this form of art, on a somewhat popular plane. In the Catholic Netherlands, Vandyke, who is more refined in his characterization than his master Rubens, painted some very good religious pictures of the conventional type, while his contemporary Eustache le Sueur in France (1617–1655) is one of the best of many artists of the second rank who exercised their talents on the familiar themes. Even in England religious pictures of the kind were painted, in the 17th cent. by Isaac Fuller, and in the 18th by Hogarth, who covered some very large canvases with religious compositions, the best of which is the 'Pool of Bethesda' on the staircase at St. Bartholomew's Hospital, London.

A somewhat remarkable development of art of a decorative kind was indirectly the result of the Reformation. This is the art of the so-called counter-Reformation largely engineered by the Jesuits. In the Jesuit churches, the most famous of which is the Gesù in Rome, built by Vignola in 1568, there was displayed decoration of the most sumptuous possible kind, embodying a protest against the Puritanism which had obtained a footing in the Church of the Reformation; and this same style in decoration spread to other church interiors of the 17th cent., with a result which visitors to Rome, Ravenna, and other places never cease to deplore.

Anton Springer has well characterized the style as one that 'robbed architecture of its fitting repose, and by the introduction of figures posed in startling attitudes, aroused or convulsed by agency unseen, of curves instead of straight lines, of pillar piled upon pillar, substituted a turbulent unrest. Not,' he says, 'that the style' (called gensrally 'Baroque') 'was without striking and artistic effect. An undoubted vigour in the disposition of detail, a feeling for vastness and pomp, together with an internal decoration which spared neither colour nor costly material to secure an effect of dazzling splendour: such are the distinguishing attributes of the Baroque style as in Rome it is to be seen on every hand.'

It is interesting to compare the spirit of ecclesiastical decorative art of this artificial kind with that of the sincere, unpretending, though in its way equally elaborate art offered by the mediæval monkish craftsman for the embellishment of his beloved fane. On a superficial view the motives may be held to be the same, but how immeasurable the difference! It is this substratum of ethical interest belonging to the history of the arts that gives this subject its importance to the student of the successive phases of human culture. It is noteworthy how much more is made of the evidence of art in historical and sociological studies on the Continent than among ourselves. The British mind is unfortunately prepossessed with the idea that the arts are merely separable accidents, detachable ornaments of human life, and not, as was really the case in the past, modes of intimate expression in which the ideas of an age or a community found embodiment.

III. *POST-REFORMATION PERIOD.*—It was inevitable that the Reformation should bring about a considerable change in the forms and the character of Christian art. Assuming the least possible alteration, let us see what would necessarily follow from the rejection of the Roman ecclesiastical system. We will suppose that the Protestant continued to recognize, as he recognizes to-day, the value of the element of beauty in human life, and the suitability of art as a form for the expression of religious ideas. The Saints would none the less all but disappear from view, and with them would go their altars and altar-pieces, as well as the picturesque and varied stories which had supplied artists for centuries past with unnumbered themes. In some respects the situation of the iconoclastic period would be repeated, and representations, such as that of the crucified Saviour, or the enthroned Madonna, which had attracted something like worship, would be banished at once from the churches. The cessation of any demand for the large scenic paintings of the Last Things may at first sight seem surprising, because in some of the reformed churches the doctrine of heaven or hell became of paramount importance. Wall paintings in churches, however, had become so closely associated with doctrines and rites now repudiated that they were generally abandoned, and with them went the pictures of the Inferno that might otherwise have proved dear to Calvinistic hearts. This limitation of the artist's range of possible subjects would, however, cause the subjects that remained to stand out in greater prominence. The person and life of Christ became of far greater relative importance under Protestantism, which refused to recognize the competing claims of Mary and the Saints. As the Bible was freely perused, the literary treasures of the Old Testament became more familiar possessions, and the prospective artist would in this way find ready for him in the bosom of the Reformed Churches a range of noble subjects of an absorbing religious interest. It must be noticed at the same time that, though sacred altar pieces and mural pictures went out of fashion, a new form of religious art grew up in the Germany of the Reformation period and spread to other lands, in the shape of the engraved plates which were abundant in the earliest printed Protestant Bibles and Testaments and in pious books of other kinds. Lucas Cranach illustrated Luther's Bible; and Holbein, who in this aspect of his art was a child of the Reformation, has left us classical examples in the 'Icones Historiarum Veteris Testamenti'—a series of Bible illustrations—and plates such as the 'Christ the True Light,' of 1527. This was a very cheap and popular form of art, and made up to some extent for the loss of the monumental works. In all these Protestant designs it would be natural, though not inevitable, for the subjects to be approached from the human side. So much had been made of the mystical element in religion in the older system, that the Reformers, though untouched by rationalism, might be disposed to keep the miraculous in the background.

It follows that under an enlightened Protestant régime there might be as much expenditure in architecture and on decoration as before, and the meeting-house of the Reformed congregation would have just as much right to 'shine like the fields of Paradise' as the monastic fane of four centuries earlier, while representative art possessed in the life of Christ upon earth, and in the doings of the Old Testament worthies, a range of subjects the value of which has just been indicated. The words of Luther are in this connexion very significant, when he said that he wished to see all arts, especially music, in the service of Him who had created and had granted them to men, and repeated the old arguments in favour of pictures

as more suitable for the instruction of simple folks than discourses. As a fact, however, the alteration brought about at the Reformation was far greater than we have just assumed. In Switzerland, for instance, in Luther's time pictures were condemned and banished as idolatrous; while in Great Britain, to take another example, the reaction of the Reformation period went so far that under the title 'monuments of superstition' artistic treasures of indescribable beauty and perfect innocence were ruthlessly destroyed. Between the first onslaught upon ecclesiastical property on the part of Henry VIII. and the edicts of Elizabeth that tried to put a stop to further vandalism, the loss to art was incalculable, and from this point of view those years of desolation and waste are among the darkest in our national annals. So richly equipped, however, were our English churches, and so well established had been the pre-Reformation tradition of beauty in the apparatus of worship, that, as in doctrine so here, a compromise was arrived at, and Christian art still recognized the Episcopal churches and cathedrals as its home, where, at any rate, it could dwell in peace till the Gothic revival of the early part of the 19th cent. fostered in it a new growth.

It was among the non-Episcopal sects in England, and especially in Scotland, that religious art fared worst. Like everything else in these churches, it was brought to the test of the letter of Scripture, and those parts of Scripture that were held at the time in special honour had little to say for it. A Biblical justification for art had always existed in the accounts of the Jewish temple and its ritual, and to these the lovers of art in mediæval days had appealed. Now, to the Presbyterian and the Independent, descriptions of temples and altars and priestly vestments and all the apparatus of ritual did not appeal, for all these things they could not away with, while of specially Christian or NT justification of art there was but small trace to be found in the Gospels. Their teaching, however broad it may be, ignores almost completely this side of life, which indeed would not naturally appeal to the Founder of Christianity in the temporal conditions under which His life was passed. His justification of the use made of the 'alabaster cruse of ointment of spikenard very costly' (Mk 14^8) is in this respect notable, as it can be worked into the service of artistic theory. Some of the recorded sayings of Christ encourage a feeling for the beauty of natural objects, but the only one in the Synoptic Gospels bearing definitely on art is of rather the opposite character. 'And as he went forth out of the temple, one of his disciples saith unto him, Master, behold, what manner of stones and what manner of buildings! And Jesus said unto him, Seest thou these great buildings? there shall not be left here one stone upon another, which shall not be thrown down' (Mk 13^1). The going forth from the Temple, if the tradition is a genuine one, was past the immense and splendid Hellenistic triple portico of Herod—the finest, Josephus says, in the world—and out under the vast substructures of the Temple area; so that the pride of the disciple in these glorious structures must have been not a little disconcerted at the response. It was thus possible at the Reformation to find Scriptural justification of a negative kind for a starved and narrow view of art and beauty, as well as for one comparatively broad and liberal, and it is interesting to note that the following out of the first view led to the extremes of rigid Puritanism, best to be studied in the Scotland of the 17th and 18th centuries; while on the second was based, as we shall see, in Holland, a phase of religious art that is one of the glories of Protestantism.

1. Narrow view of art.—Edicts for the destruction of works, which the early Reformers, like the Byzantine iconoclasts, stigmatized as 'idolatrous,' were not confined to Great Britain, but were necessary consequences everywhere of the revolt from Rome. How far they were in each land actually carried out in practice depended on many causes. The destruction has been comparatively thorough in Scotland, but it must be remembered that south of the Forth, at any rate, this pulling down and breaking was due quite as much to the constant English ravages as to Scottish iconoclasm. The views of the first Scottish Reformers may be gathered from the so-called *Buke of Discipline* of 1560, where under 'The Thrid Head, tuiching the Abolissing of Idolatrie,' we read as follows:

'As we require Christ Jesus to be trewlie preached, and his holie Sacramentis to be rychtlie ministerit; so can we not cease to requyre Idolatrie, with all monumentis and places of the same, as Abbayis, monkeries, freireis, nunreis, chapellis, chantreis, cathedrall kirkis, channounreis, colledges, uthers then presentlie are paroche Kirkis or Sculis, to be utterlie suppressed in all boundis and places of this Realme. . . . As also that Idolatrie may be removed from the presence of all personis of quhat estait or conditioun that ever thai be, within this Realme. . . .

'By Idolatrie we understand, the Messe, Invocatioun of Sanctis, Adoratioun of Ymagis, and the keping and retenying of the same: and finallie all honoring of God, not conteaned in his holie Word' (*The Works of John Knox*, ed. David Laing, Edinburgh, 1848, ii. 188).

In accordance with the principles thus laid down, we find that, on July 25, 1567, the Lords of the Council, after receiving the abdication of Queen Mary, affirmed certain articles of the Kirk, amongst which was their intention 'to rute out, distroy, and allutirlie subvert all monumentis of ydolatre, and namelie the odious and blasphemous mess' (*Register of the Privy Council of Scotland*, i. 536). That this intention was not at the time fully carried out we may judge from the 'Acts of the General Assembly' under date July 29, 1640, where at a meeting in Aberdeen there was passed an 'Act anent the demolishing of Idolatrous monuments' that is worded as follows:

'Forasmuch as the Assembly is informed that in divers places of this kingdome, and specially in the North parts of the same, many idolatrous monuments, erected and made for religious worship, are yet extant, such as crucifixes, images of Christ, Mary, and saints departed, ordaines the said monuments to be taken down, demolished, and destroyed, and that with all convenient diligence' (*Acts of the General Assembly*, Edinburgh, 1643, p. 44).

It is to be remembered that in Scotland it was not a question merely of the Reformation, but of a long continued and embittered contest against everything that savoured of Popery, and in the course of this a good deal that might well have been saved was suffered to perish. Thus, the Ruthwell Cross was thrown down and broken in 1642.

2. Broad view of art.—It was noticed above that on a broad and liberal Protestantism was based a phase of religious art that is among the glories of Reformed Christianity. The reference is to the Scriptural pictures produced in the Holland of the first half of the 17th cent., especially by Rembrandt and some of his scholars. Holland is the one country that developed a national art as an immediate sequel to its adoption of the principles of the Reformation. Protestant Germany might have done the same, but, owing to wars and the impoverishment of the country, art after the time of Dürer ceased almost to be cultivated, and Dürer's younger contemporary, Holbein, left his native country for England, which on her part, by her contented utilization of his services, showed her own indifference to the work she was paying him to do. In Holland, a country both wealthy and energetic, art was national and at the same time Protestant, and in the latter aspect it was incorporate in Rembrandt.

A very large number of the drawings, etchings, and pictures by this master are on religious themes,

drawn from both the Old and the New Testaments. Many of these, such as the 'Passion' series at Munich, are treated in a cold, almost academic fashion, though by no means on the conventional Italian lines; but, on the other hand, there exists a body of his work on these subjects that is as fresh, as warm, as dramatic in feeling as it is rich and masterly in execution. Rembrandt, whose work in this kind, it must be confessed, stands almost alone, has shown us here how it is possible to treat the person and the acts of Christ in a spirit as far removed from mysticism on the one side as from rationalism on the other, so that His Divine majesty is as convincingly apparent as His homely aspect, His friendliness, His intimate sympathy with human joys and sorrows. The writer may be allowed here to quote a sentence or two from a work of his own on the master.

'It is instructive to take the central figure of the Christian story, and to note the different situations, idyllic, epic, and dramatic, in which Rembrandt has portrayed the figure of Christ. We see with what warmth of human feeling he has invested those scenes in which the Saviour, an infant or a growing youth, makes holy by His presence the simple incidents of family life; how he rises to the height of epic dignity when Christ moves, a mature and heroic form through the acts of His earthly ministry; with how intimate a sympathy he withdraws the veil from the scars of agony, and displays the Man of Sorrows a sublime though pathetically human figure in the tragedy of His Passion; and finally, how he invests the Risen Form with a power and grace that have been made perfect through weakness and suffering, and completes the picture by embodying the eternal love that Christ revealed, in the father of the Prodigal' (*Rembrandt*, London, 1907, p. 279).

There is no need for any extended description of these masterpieces by Rembrandt, which we must remember are as fine in colour or light and shade and in technical execution as they are in the intellectual and ethical qualities of their design. A word may be said on one of the less known pieces, the 'Christ and Mary Magdalen' at Brunswick. We all know the 'Noli me Tangere' by Titian in the London National Gallery. It is a fine picture, but how unconvincing! There is no mystery, no appeal to the imagination. The figures, while sympathetically rendered, are posed for purposes of composition; the scene is full of daylight, and there is a village close by on the hill. In the 'Christ and Mary Magdalen' at Brunswick, in the mysterious garden where the Risen Lord meets with Mary amidst the gloom of rocks and trees, a touch of light on the clouds above heralds the coming morn, but the shadows of night cling about the form of Christ, whose body emits a faint ghostly radiance. His hand plucks away the robe to which the adoring Magdalen would cling; but the tender though reserved inclination of the head towards the woman, and the sympathetic gesture of the other hand, are loving-kindness embodied. We are there in the garden with the pair, and they both live before us. This, we feel, is how they looked and acted. In the Louvre picture of 'Christ at Emmaus,' where He is known in the breaking of bread, an equally imaginative treatment invests the figure with an unearthly charm, that drew from the great French critic Fromentin some of the most eloquent sentences he ever penned:

'Has any one ever yet imagined Him thus, as He sits facing us there and breaks the bread as He broke it on the night of the Last Supper, so pale and so thin, in His pilgrim's robe, with those darkened lips on which suffering has left its traces: with the large soft brown eyes whose full gaze He has directed upwards . . . a living, breathing being, but yet one who has assuredly passed through the gates of death? The attitude of this divine visitant with that intense ardour in a face whose features are hardly to be discerned, and expression is all in the movement of the lips and in the eyes—these traits inspired from what source one knows not, and produced one cannot tell how, are all of value inestimable. No other art has produced the like; no one before Rembrandt, no one after him, has made us understand these things' (*Maîtres d'Autrefois*, Paris, 1890, p. 381).

The homely warmth of feeling in Rembrandt's 'Holy Families,' and in OT or Apocryphal pieces, such as those from the story of Tobit, of which he was especially fond, is just as satisfying in its way as the imaginative power just illustrated. There is also an intellectual side to his religious art, and we have the sense in looking at some of his pieces that he has thought out the subject and consciously arranged it, though this never results in that academic coldness which is the fault of so many accomplished Italian designs. The chief example is the famous etching called the '100 Florin Plate' or 'Christ Healing the Sick.' This is one of Rembrandt's greatest masterpieces, and is well known though not always rightly interpreted. Sick persons, it is true, figure in the plate, but Christ is not healing them. The truth is that there is a great deal more in the piece than the descriptive title suggests. It is really an illustration of Mt 19, and brings together a number of distinct persons and incidents, a unity being secured for the whole by the commanding dignity and beauty of the central figure. The words at the beginning of the chapter, 'and great multitudes followed him; and he healed them there,' are the motive for the introduction on the right of the etching of that wonderful throng of the maimed and feeble and sickly that Rembrandt has rendered with such pathos and intimacy. The next verse, 'and there came unto him Pharisees, tempting him,' accounts for the company of the well-to-do on the left, whose shrewd and cynical faces and expressions of inquiry suggest the insidious queries with which they have come prepared. Christ, however, in the centre is attending to neither group, but is holding out His hand in encouragement to a woman before Him who clasps a child in her arms, while Peter, by His side, is seeking to thrust her away. This is, of course, the 'Suffer the little children, and forbid them not,' of the middle of the chapter; while in the richly clad figure of a youth, who sits musing with his face partly hidden by his hand, we recognize the young man 'that had great possessions.' The justice of the characterization throughout the piece makes it a real commentary on the passages illustrated, and the actual situation is brought before us in the lifelike impressive groups.

It may cause surprise to find that Rembrandt's treatment of these sacred themes is so broad and genial, because the Holland of his day was strongly Calvinistic, and religion wore generally a garb of austerity. Now, we possess a contemporary notice, according to which Rembrandt was a member of the religious sect called Mennonites; and as the best of these Mennonites were on the whole Broad Churchmen of the Arminian persuasion, Rembrandt's upbringing may have given him liberal views on theology which will account for the comprehensive charity which breathes from all his scriptural pieces. His very last picture, a large and solemn canvas at St. Petersburg, represents the 'Return of the Prodigal Son,' and in this moving presentment of the tattered and weary wanderer as he buried his shame-stricken face in the bosom of the father whose compassion fails not, we read the artist's belief in an all-embracing Divine love. The effacement of the personality of the hapless truant has concentrated all the interest of the scene on the father, who presses him to his heart and gazes down on him with infinite pity and tenderness. He is not only the father of the parable, but the Eternal Love incorporate; and Rembrandt's art becomes in the best sense an embodiment of the higher Christian thought.

We may accordingly regard Rembrandt's design as more satisfying to the religious sense of the liberal Protestant than that of any other artist, and with this as our standard may pass on to a brief critical survey of religious art as it has been

revived in various experimental but interesting forms nearer our own time.

IV. *Modern Times.* — The last part of the 17th and the whole of the 18th cent. produced practically nothing in this style that was not a mere bloodless simulacrum of the academic art of the Florentine and Roman schools. An exception may be found at the close of the 18th cent. in the work of William **Blake**, who had genius enough in art and literature to have achieved true greatness, had that genius been trained and directed aright. Blake was exceptional, in his art a romanticist before his time, and belonging to the century of Coleridge rather than of Pope. Earlier in the same century, it is worth notice that even Hogarth in his religious pieces did not attempt the homely intimate style in which he might have succeeded, but adopted the conventional types of the Italianizing figure painters of the time. The revived religious art of the 19th cent. is the child of the romantic movement. This was a reaction against the predominant classicism of the latter half of the 18th cent., and took the form partly of a return to nature in which Rousseau and Robert Burns were pioneers, and partly in a revived interest in what was mediæval, which began in Germany and spread to Great Britain and to France. In Germany mediævalism was a natural product, for her traditions of past greatness were rooted in the Middle Ages, and even a classicist like Goethe paid homage to these romantic bygone glories. A curious result in the sphere of religious art of this return to the Middle Ages has made itself seen in our own time in the pictures from the life of Christ by Eduard von Gebhardt, in which the costumes and the *mise en scène* are taken from the Germany of the 15th century. What we know in our own country by the name of the 'Gothic Revival'—a movement that led to the restoration of mediæval features in innumerable English churches and to the establishment of something like a cultus of the romantic in art—was at the basis of the very interesting artistic experiment known as pre-Raphaelitism, while the earlier religious painting of the German so-styled 'Nazarenes' was founded rather on the national self-consciousness of the German people firmly braced by the struggle against Napoleon; mediævalism, at any rate, played no part in it, for the Nazarenes lived and worked in Rome. Both these artistic movements, the German and the English, were sincere and earnest, even to the extreme of fanaticism, but the æsthetic result was in neither case wholly satisfactory.

1. **Nazarenes.** — The name 'Nazarenes' was applied in good-humoured banter to a company of young German painters who in the early years of the 19th cent. settled in Rome in an abandoned monastery, where they sought to re-constitute the life and work of the painters of the earlier religious schools. They were romanticists of the type that surrenders itself to idealism but recognizes no attraction in nature and the things of the real world. Hence their art draws its motives not directly from nature, but at second hand from the works of the older masters. This secured a certain look of style in the compositions; but, on the other hand, the figures lacked individual character, and the colouring was pale, flat, and conventional. One good piece of work the Nazarenes accomplished early in their career, which has laid modern art under an obligation. In 1815 they re-introduced the technique of fresco painting, which had been abandoned since the death of Raphael Mengs in 1779, and with the aid of one of Mengs's old journeymen executed successfully in the true process a series of paintings in a room of the Casa Bartholdi on the Pincian at Rome. These paintings are from the story of Joseph, and have been removed to the National Gallery at Berlin, where they are in a good state of preservation. Cornelius, Overbeck, Schadow, and Veit collaborated, and the works are among the best from an artistic point of view produced by the school. Modern German monumental wall-painting, which has flourished through the century, had here its origin.

Of the Nazarenes, **Friedrich Overbeck** (1789–1869) was the most characteristic figure. A devoted adherent of the Catholic Church, like most of his associates, he was intensely devotional, and his pictures breathe the same spirit of quiet and retiring devoutness that we have come to know in the early schools of Sienna and of Cologne. 'Art is to me,' he wrote once, 'a harp on which I would fain hear always sounding hymns to the praise of the Lord.' The comparative absence from his works of the qualities of colour, light and shade, and handling, which are essential to the beauty of a modern picture, makes it unnecessary from the point of view of this article to consider them further. **Cornelius** (1783–1867) was a far stronger artist than Overbeck, and covered vast wall spaces in Munich and elsewhere with compositions marked by learning and vigour, but lacking in warmth of feeling or æsthetic charm. His great fresco of the mediæval subject of the 'Last Judgment' in the Ludwigskirche at Munich, painted in 1840, may count as his masterpiece.

On the same plane of art as the Nazarenes are a once esteemed painter of religious themes, the Netherlander **Ary Scheffer**, and the accomplished Frenchman **Hippolyte Flandrin**, a pupil of Ingres, who executed beautifully drawn figure compositions on religious themes on the walls of Parisian churches, which are, however, tame in effect and wanting in charm of colour. Of all this set of artists no one had in him so many elements of true greatness as the Aberdeen painter, **William Dyce**. Had he been born in a time and in surroundings favourable to the development of monumental figure painting, he would have been a great artist, for there is in his design an originality and an intimacy of feeling, in his execution a firmness, that strike us at once as exceptional in this phase of art. Born in 1806, he met and was influenced by Overbeck in Italy, and Richard Muther in his *Modern Painting* reckons him 'with the Flandrin-Overbeck family,' though he notes that 'where the Nazarenes produce a pallid, corpse-like effect, a deep and luminous quality of colour delights one in Dyce's pictures. He is finished in grace, and with this grace he combines the pure and quiet simplicity of the Umbrian masters. . . . There is something touching in his madonnas. . . . A dreamy loveliness brings the heavenly figures nearer to us' (iii. 5). The 'St. John leading the Madonna to his Home,' in the Tate Gallery in London, is a good specimen of his art.

2. **Pre-Raphaelites.** — The religious art of the 19th cent. received a contribution of some value from the English pre-Raphaelites. Shortly before 1850 three or four young artists in London found themselves drawn together by something of the same feeling in art that had actuated the Nazarenes. They revolted against the academic conventions with which the name of Raphael was specially connected, and discerned salvation for art only in a return to the sincerity and simplicity of the 15th century. Unlike the Nazarenes, however, they had a strong feeling for nature, and it was from the first one of their principles that every part of a picture should be painted with the most scrupulous care directly from the living person or the natural object. The title 'Pre-Raphaelite Brotherhood' and the mystic initials 'P.R.B.' which appeared after their signatures on their paintings, were the outward signs of a union which

ultimately included seven members, and the fact that two or three were writers explains the fact that the movement was from the first as much literary as purely artistic. The three original members, Dante Gabriel Rossetti, Holman Hunt, and John Everett Millais, are the only ones who need be mentioned here. Their intense earnestness, combined with their study of the early Italian masters, led them to religious themes, though these were not exclusively their objective. Indeed, they were before all things romanticists, and may be claimed by the Gothic Revival as its spiritual offspring. They were devoted to the poets, and some of the best things they accomplished in art are the illustrations to Tennyson's *Poems* published by Moxon in 1857. In Rossetti this tendency was particularly marked, and he ultimately confined himself as a painter to the romantic field, in the cultivation of which he was followed by Edward Burne Jones. This romantic and poetic vein kept their devotion to the facts of nature from falling into mere realism, so that in their pictures we discern a curiously matter-of-fact rendering of accessories, while the whole scene may be a fairyland of a poet's creation.

Of the distinctly religious pictures of the school, the best were some of the earliest. In 1849 and 1850 Rossetti exhibited the quaint but fascinating 'Girlhood of the Virgin Mary,' where the figures are portraits of the painter's nearest relatives, and the 'Ecce Ancilla Domini' which has now happily found a home in the national collection. For *naïveté* of feeling and poetic charm it is one of the loveliest pictures ever painted, and in its transparent sincerity it might have shamed into nothingness the commonplace conventional painting in vogue in the England of the time. The early Millais of 1850, 'The Child Christ in the Workshop of Joseph,' a far more ambitious piece, is perhaps, artistically speaking, the best religious production of the school; for Millais, as his after career showed, was far more highly endowed as a practician than any of his associates. Holman Hunt's universally known 'Light of the World' appeared in 1854, and this artist has maintained throughout his long and honourable artistic career the same religious earnestness, combined with the pre-Raphaelite faithfulness in details. 'In the whole history of art there are no religious pictures in which uncompromising naturalism has made so remarkable an alliance with a pietistic depth of ideas' (Muther, *Modern Painting*, iii. 12).

From the artistic point of view it should perhaps be pointed out that the plan of copying nature in a picture detail by detail does not really secure the truth aimed at, and with the pre-Raphaelites its adoption was due to intellectual rather than to purely artistic considerations. The experiment was of value in its time as a protest against the vague conventional rendering of nature with no true knowledge behind it, which was then the fashion in the English school, and to the non-artistic the principle will always seem attractive because of its ethical sound, but, as Horace says in the *Ars Poetica* (line 31):

'In vitium ducit culpæ fuga, si caret arte,'

and the way to represent nature truthfully in the artistic sense is not to copy bit by bit, but to render the general aspect of things in their true relations of tone and colour. This is the real difficulty of painting, and an impressionist study that secures absolute truth in these relations is at once far more difficult, and far better as art, than the most elaborate rendering of individual details with meticulous exactness. An English painter, possessed of a shrewd wit, tried the pre-Raphaelite method about 1850, but gave it up, saying, 'This cannot be right, it is too easy!' Hence it has come about that many a pre-Raphaelite painter who has carried out this principle of work has been, as Horace goes on to say:

'Infelix operis summa, quia ponere totum | Nesciet.'

Moreover, exact piece-by-piece rendering leads too often to a hardness in delineation that is destructive of pictorial effect, and when this is combined with crude and inharmonious colouring, the result from an æsthetic point of view may be disastrous. At the same time, though pre-Raphaelite pictures vary greatly in their artistic value, they are always to be respected for their earnestness and sincerity, and some of those on Biblical themes will ever remain prominent and justly-honoured representations of an interesting modern phase of Christian art.

3. Modern experiments. — One last phase of Christian art remains to be noticed, bringing us quite to our own day. The reference is to certain endeavours to secure convincing verisimilitude in the pictorial representation of Biblical scenes by the abandonment of all the time-worn conventions of academic design, and by the use of local types, costumes, accessories, and setting. This experiment has been tried in various forms, and always with sincerity and devout feeling. So far as these qualities are concerned, the works already noticed of the German von Gebhardt, whose 'Last Supper,' painted in 1870, is well known in this country through reproductions, are equal to the best; but his curious convention of a 15th cent. *mise en scène* gives them a position apart. One form which this work has taken is to place the events of the life of Christ in an Oriental setting, carefully elaborated from a study of the Palestine of to-day. The idea was first started earlier in the 19th cent., when the attention of artists was turned for the first time to Oriental subjects. Horace Vernet, on his Eastern tour in 1840, had noticed that the scenes of the Bible stories were laid in the East, and should be represented in Oriental settings. This was actually attempted by Holman Hunt, who painted religious pictures in Jerusalem and by the shore of the Dead Sea. Some German artists sought the same end by the adoption for the NT characters of the types of modern scions of the Hebrew race; but it has been reserved for a French and a Scottish painter of our own time to work the idea out with completeness. Both James Tissot, a French artist known first for his pictures of modern fashionable life, and William Hole, of the Royal Scottish Academy, conceived the idea of portraying the various incidents of the earthly ministry of Christ as they might happen in the Palestine of to-day. The lighting and colour of the landscapes, the forms of nature and of buildings, the attitudes of the figures and their costumes, the furniture, the accessories, are all drawn from actual life, as it can be studied to-day on the Mount of Olives, by the Sea of Tiberias, or at Bethany. The resulting pictures, made accessible by popular reproductions, are full of interest, and at every turn furnish some new suggestion that makes us realize and interpret better the familiar scenes. They are, however, in both cases comparatively small water colours and do not aim at greatness of effect. Indeed, the elaboration of the interesting detail often interferes with the general impression of a scene in its ethical or religious aspects. They are, nevertheless, valuable contributions to the religious art of our day.

An experiment in quite another direction has been made, also in our own day, by one or two German artists, of whom the most important is Fritz von Uhde. Von Uhde is probably the best painter of all those who have given themselves in this latest epoch to Scriptural themes, and his work has more of the quality we have learned to

admire in Rembrandt than that of any of the other moderns. There is no attempt here at archæological correctness, and the idea of an Oriental setting never crosses the artist's mind. On the contrary, he takes the actual scenes in town or village or country of the Germany of his own day, and imagines Christ introduced into them, and dealing with those He meets as He dealt with His fellow-countrymen in Palestine. In 'The Sermon on the Mount' Christ is seated on a modern wooden bench in the fields, and is discoursing to a group of German peasant women and children, on the outskirts of which hang the men who are going home from their work, with their tools over their shoulders. 'Suffer little children to come unto me,' at Leipzig, shows us the interior of a modern schoolroom in a small town, where the master stands in the background, while a group of children of all ages are gathered somewhat timidly near the chair on which a stranger, who has just entered, has taken his seat. This stranger is Christ, and we are made to see that He is gradually drawing the little ones to Himself by the magnetism of His personality. In other pieces we see Christ entering a peasant home, or sitting at meat with His friends, as at the Last Supper; or, again, with a frank acceptance of the mystical, the artist has given us the scenes of the Annunciation or the Nativity. The pictures are always serious, devout, and at the same time warm with human feeling, and often touched with idyllic charm. Their quality as works of art gives them an equally high place with that which they claim as achievements in religious design.

The name of Rembrandt was mentioned above in connexion with these homely renderings of sacred scenes. Rembrandt, like von Uhde, in the best of his pictures took the setting from his own surroundings, though he indulges not seldom in Oriental vestments and in Jewish types. These surroundings are, however, in the first place, very much generalized, so that they might almost do for any age and country; and, in the second place, they are as unfamiliar in the eyes of 20th cent. Britons as if they were genuine Oriental transcripts. Hence the setting of Rembrandt's pieces takes them to that distance from us which is necessary in order to let the imagination have free play. In the paintings of our own time, on the other hand, both the Oriental backgrounds and the modern ones are too real and too familiar, and the appearance against them of Christ and the Apostles seems forced and almost theatrical. If we recognize who the sacred personages are, they do not appear to live in these surroundings, but to have come in in a disguise, and we half expect their interlocutors to be finding them out. On the other hand, if we accept them as modern Orientals or modern Europeans, we cannot readily realize their unique character and greatness. They have been brought down too effectively from the ideal to the actual sphere.

Summary.—In the foregoing an attempt has been made to describe and to analyze, from the points of view indicated at the beginning of this article, the chief phases of religious art as they have manifested themselves through the Christian centuries. There have been two sides to the activity of Christian artists, each of which may here suitably receive a final word.

(1) On the one hand, their activity has been essentially *decorative*, and their spirit has been that of the monkish craftsman of the 11th, the Gothic mason and carver of the 13th centuries; all they could make or do they were zealous to offer on the altar of Christian service. Theirs was the gift of beauty to the Creator of all beauty—a grateful rendering back of the boon so lavishly bestowed, the gift of skill and care to the Lord of the inventive brain and cunning hand. How far, we may ask, can we in these modern days enter into the spirit of those mediæval craftsmen, and turn any artistic gifts we may possess to this high service? Unlike the men of old, we have in these days almost to justify the bare existence of the cult of beauty and of art, for these are not a natural and necessary part of our lives. We have seen how the practice of the arts in early Christian and monastic surroundings followed inevitably from the fact that life without this element of art was in those days impossible. With us it is something extra, and is as a consequence challenged to give an account of itself. That idea of an opposition between the life of art and the practical life of service to one's fellows, which underlies Tennyson's 'Palace of Art,' is not justified by the facts of the world. It is perfectly possible, as we can learn by looking around us, to combine the practical with the contemplative life, and to exercise the æsthetic faculties without any withdrawal from the sphere of the actual. It is true that there are those who do so withdraw themselves, but it does not follow that they are tempted away by the allurements of the imagination. It may very well be that they are morbid and self-absorbed, and if a field of activity did not offer itself in the æsthetic sphere, their life might decline to a much lower level. The pleasures of art are, at any rate, innocent, and if they do not necessarily ennoble the character, they at least refine the taste.

We saw that the mediæval artist-monk exalted the practice of the crafts that produce beautiful things as not only a function of human nature but a law of the universe at large. There is a narrow religiosity that is afraid of a human nature so amply endowed, and would confine its activity within much closer limits. In the churches of to-day, however, this timid creed is already an anachronism, and most of those which have Puritan traditions at their back accept to-day the broader view to which, at any rate, the student of the history of Christian art must feel himself forced. And if this energy of art is not only wholesome, but even in a sense enjoined, in what can it be more fittingly expended than in that service to which we have seen it devoted through the centuries? The time is now past when the square barn-like meeting-house, the bare walls, the homely fittings, could satisfy the cultured worshipper.

It is true, and must never be forgotten, that the outward show is as a mere nothing to the 'truth in the inward parts,' which is demanded as much from churches and congregations as from individuals; and if worship were less sincere in a beautiful and richly adorned fane than in a simple room, it is the art that would have to be sacrificed. It is true also that in parts of our own country a sacred tradition of unselfish piety, of heroic endurance, clings to these whitewashed walls that for generations past have looked down on the defenders of a creed for which they were ready at any moment to give up their possessions or their lives. The Church at large could ill spare the Puritan spirit, and must strive to retain what is best in this, while contesting some of its negations. The introduction of instrumental music into the act of worship, and of the element of art and beauty into its material apparatus and its home, is in principle conceded almost everywhere in Christendom, and there is every reason why the mediæval tradition should be revived, and these things not merely accepted as a fashion, but embraced with the godly joy and pride of the older days.

(2) On the other hand, the activity of Christian artists has been exercised not merely on the

creation of what is beautiful, but on representations of sacred scenes and personages, or symbolic shows that had a *didactic* purpose. This work, as we have seen, has taken several different forms. We may distinguish here: (*a*) the liturgical, doctrinal, or allusive composition, which began, as we saw, in the catacombs, and flourished greatly, in the form especially of the pictures of the Last Things, in the later mediæval period; (*b*) the devotional picture, represented centrally in the work of Fra Angelico, in which the specially Christian virtues of humility, devotedness, self-abandonment, are brought to view and their practice inculcated; (*c*) the historical representation from the life of Christ or of OT or NT worthies—a form of art that we have come across in many shapes, and in which at one time the mystical, at another the human, element is most apparent; and (*d*) the great work of art in which a supreme master like Michelangelo has created types that are profoundly ethical, though not in the distinctive sense Christian.

How is each of these forms of religious art related to the Christian thought of enlightened Protestantism?

(*a*) The first kind of picture has ceased for Protestants to have any didactic or specially religious significance, and is regarded rather from the intellectual point of view as an embodiment of poetic thought. The designs of William Blake are of this kind, and a good modern instance may be found in the allusive symbolical designs which, with charming decorative feeling, Mrs. Traquair has executed in the 'Song School' of St. Mary's Episcopal Cathedral and the Catholic Apostolic Church in Edinburgh, as well as in other buildings. Such works belong more to the domain of poetry and mysticism than to that of religion in the strict sense of the term. They answer to a special phase of artistic feeling both in the creator of them and in the spectator, and, in fact, they repel some sincere lovers of art just as strongly as they attract others. So long as there are artists and lovers of art, the temperament of some of these will turn them in the direction of works of the kind. This phase of religious art is illustrated also by some of the productions of G. F. Watts, an artist of genius who was meant to be a great painter, but was drawn aside from the direct course by the copiousness and insistence of his intellectual ideas.

(*b*) The time will never come when we shall cease to take delight in the purity and devoutness of the devotional pictures of the early schools of religious art in Germany and in Italy. In so far as they express the specially Christian temper of humility and dependence, and reveal to us innocence and love and the spirit of service embodied in the Virgin mother, in saint, and in angel, they will always have a message for those religiously susceptible. The harsh theological words 'Hagiology,' 'Mariolatry,' and the like need not disturb our contemplative enjoyment of these simple and sincere expressions of a faith which in the great essentials was the same as our own. The works are, at the same time, removed into the historical region by the fact that the whole religious *milieu* which conditioned them at their forthcoming is so different from ours. We regard them with interest and affection, but recognize them as not belonging to our own time or our own range of religious ideas.

(*c*) The historical treatment of the life of Christ or of the scenes of the OT is a matter that concerns us in these days and in Protestant surroundings far more nearly. It corresponds with the modern interest in the facts of the past, and with the (partly rationalistic) tendency to emphasize the human side of Christianity. Notice has been taken in what has gone before of the many attempts which have been made in art, throughout post-Reformation times, to bring home with convincing force to the spectator the personality, and the significance of the acts, of Christ. The difficulty has always been, on the one hand, to avoid what is mystical, with all the other conventions of the professed religious schools; and, on the other, to prevent such a modernizing of the *mise en scène* as may destroy the air of remoteness from the ordinary world and of ethical supremacy, which should belong to the person of the protagonist. Rembrandt, as we have seen, has succeeded here where many have failed; and when the whole body of his work on religious themes is placed in accessible form before the public, as has been proposed, he will probably be recognized by all as the greatest religious artist of whom the history of painting bears record.

(*d*) The impression of the Sublime, when conveyed either by the appearances of nature or by those of art, is always in one sense a religious impression, for it implies a chastening, and, in the Aristotelian sense, a purifying, of the individual emotions by the recognition of what is transcendently great. This greatness is not hostile or terrifying, for the æsthetic impression of the Sublime is destroyed when the being is shaken or cowed through fear, but it represents, as it were, a challenge, to which we respond by bracing up the powers, and by measuring ourselves with it in the strength of free intelligence and in a certain confidence that does not preclude humility. So the human spirit, in the contemplation of the Divine, is not crushed, but raised and strengthened. Now, of all the functions that the arts of form can exercise for the higher service of man, none is greater than that of presenting human nature before us in aspects of such grandeur that we feel in a measure brought into contact with the Divine. The ordinary levels of human greatness are transcended by these exceptional creations of art, and our spirit is uplifted in response. The impression thus produced is religious, but it is quite apart from any particular creed. It takes us into a region where all creeds are merged in the one all-embracing conception of the Godhead, supreme in goodness as in power. It follows from this that all art which rises to this ethical level is religious art, whatever the creed of its creator; and from this point of view the masterworks of the Hellenic sculptor may claim a position by the side of the designs of a Michelangelo, or of any other creative artist of the Christian period. The impressiveness of a great work of art depends largely on the simplicity as well as the force of its message, and it is not by inculcating any special doctrines of religion but by raising the whole being into communion with the highest that art may best serve the spiritual needs of mankind.

LITERATURE.—For the whole subject up to the end of the mediæval period, the standard work is Schnaase, *Geschichte der bildenden Künste*[2], Düsseldorf, 1866, etc. See also Woltmann, *History of Painting*, Eng. tr., London, 1880, vol. i. Baum-Geyer, *Kirchengeschichte für das evangelische Haus*[3], Munich, 1902 (illustrated), gives a very good view of the bearing of the phenomena of art on the life of the Church at different periods. The following are more special works: for Early Christian Art, H. Leclercq, *Manuel d'archéologie chrétienne*, Paris, 1907; for monastic, Theophilus, *Schedula Diversarum Artium*, ed. Ilg, Vienna, 1874; for Gothic, Gonse, *L'Art gothique*, Paris, 1891; Mâle, *L'Art religieux du xiiie siècle en France*, Paris, 1902; for Italian, Venturi, *Storia dell' arte italiana*, Milan, 1901, etc.; for Flemish, Crowe and Cavalcaselle, *Early Flemish Painters*, London, 1872; for the engraved work of the Reformation period, Woltmann, *Holbein und seine Zeit*[2], Leipzig, 1874; for Rembrandt, Baldwin Brown, *Rembrandt: a Study of his Life and Work*, London, 1907; for modern developments generally, Muther, *History of Modern Painting*, Eng. tr., 2nd ed., 4 vols., London, 1907, with full bibliographies of the various artists and schools.

G. BALDWIN BROWN.

ART IN MANUSCRIPTS (Christian).* — There is no form of Christian pictorial art that has come down to us from the Middle Ages in such abundance, in such variety, and in such a genuine and unaltered condition, as the art of miniature-painting for the illustration and decoration of manuscripts. Isolated examples dating from the 4th cent. to the 8th may be found scattered through the great libraries of Europe, while others from the 9th cent. onwards exist in considerable numbers, not only in public libraries but in many private collections—and this in spite of the enormous destruction that has taken place through their being little cared for, or liturgically out of date, or the objects of fanatical hatred. There is no doubt that the manuscripts thus destroyed must be numbered by hundreds of thousands. At the same time, it must not be concluded that the majority of these, or even a large percentage, were as attractively written and illustrated as the precious volumes exposed in our museums. A glance at the contents of any considerable mediæval library, like those of Hereford Cathedral and some of the Colleges of Oxford and Cambridge, shows us how commonplace and dull and full of tiresome contractions was the everyday scholar's book, and that in nine cases out of ten the loss of them would not be a matter for artistic regret. The richly painted manuscripts on the whitest vellum were done either as furniture for lectern and altar, in keeping with the other splendours and adornments of a great church, or for the use of wealthy laymen and ecclesiastics, who sometimes read them as little as a modern student reads the *éditions de luxe* that he buys of poems that he has learned to love in a homely setting. St. Jerome, in his preface to Job, makes light of such possessions. 'Let those who care for them,' he says, 'own books that are old, or written with gold and silver on purple skins. All I need is a good text.' This sentence shows that the spirit of the fastidious book-lover was already abroad in the 4th century. It is perhaps a matter for congratulation that not every one had so austere a taste as St. Jerome.

The earliest examples of painted books that have survived in Europe are two Vergils of the 3rd or 4th cent. in the Vatican Library; but these do not come within the scope of the present article, which deals only with this branch of art in relation to Christianity. As might be expected, nearly all the earliest Christian manuscripts that exist are either Bibles or portions of Bibles, beginning with the Vienna Genesis of the 5th cent., which contains eighty-eight miniatures, and leading to the Ashburnham Pentateuch, written at Tours in the 7th cent. and adorned with nineteen large pictures. This is now in the Bibliothèque Nationale at Paris. Of the same century is the famous copy of the Gospels known as the *Book of Kells* at Trinity College, Dublin. This book, which is at once the earliest and the finest of the Celtic manuscripts, was written by a scribe or scribes of the utmost accomplishment, and ornamented with initials and other larger decorations of miraculously interwoven lines. The Irish decorators, however, while gifted with a sureness of hand that is almost beyond belief, were totally lacking in the higher qualities of imagination, and when confronted with a subject like the Crucifixion, showed as lamentable an inability as the veriest savage to draw and compose the human figure. Next after the Book of Kells the best-known example of this style is the *Lindisfarne Gospels* at the British Museum (fig. 1, p. 890), which, though not executed in Ireland, belongs to the same Celtic tradition and to approximately the same date. All subsequent examples, which do not owe a new development to external influences, show a falling off from this high standard. There was, in fact, in the system of the Celtic draughtsmen no human element or element of growth, and when once they had achieved the mathematically perfect, only decadence and repetition lay before them. Nevertheless, their consummate skill in ornamental design gives them a unique place in the history of book decoration, and was not without some effect on later schools in other countries, though always in subordination to the more emotional impulses derived from Rome and Constantinople.

Pictorially the Roman school, best exhibited in the paintings of the Catacombs, bequeathed but little that we can admire to the book-decorators of the Middle Ages, though as late as the 10th cent. books were illustrated with pictures, usually dead both in colour and expression, that differed scarcely at all from their classical prototypes. The Byzantine pictures in copies of the Greek Gospels and Lives of Saints written at Constantinople, full of Oriental blendings of gold and brilliant colour, and with a seriousness of intention quite absent from most of the classical figure-work, had a far wider and more vivifying influence on the art of the West. Under Roman and Byzantine influences, either separate or combined, a series of sumptuous books, usually copies of the Latin Gospels, and some of them written entirely in letters of gold, were produced on the Continent between the 8th and 12th centuries. By the latter century, Byzantine art, having reached an academical stage which allowed of no further evolution, was, as it were, frozen and crystallized into forms which in Russia survive unaltered to the present day.

Meanwhile, in England, and especially at Winchester, a notable school of book-decoration had arisen. The most famous example of this school is a *Benedictional* belonging to the Duke of Devonshire, which was written at Winchester for Bishop Æthelwold between the years 963 and 984. A similar *Benedictional*, written a few years later for Archbishop Robert of Jumièges, is now in the public library at Rouen. The British Museum is rich in productions of this school, beginning with *King Edgar's Charter of Hyde Abbey* (fig. 2, p. 890), written entirely in gold in 966 and enriched with a beautiful frontispiece, in which the figures are drawn with much animation and clad in the fluttering draperies characteristic of the English miniaturists of the 10th and 11th centuries.

During these centuries and for some time longer, it is not too much to say that English book-illustration was the finest in Europe. Until the end of the 13th cent. Italian pictorial art was much less inventive and energetic than that of England and France, while Germany was likewise under a weight of enervative Byzantine tradition, which seems to have prevented its producing more than a trifling number of books of notable merit between the 12th cent. and the time of the invention of printing. In the monasteries of Flanders, Hainault, and Artois, many stately books were written and illuminated, but in the reign of St. Louis the fame of the University of Paris attracted scholars and artists from all Christendom, who thenceforth made Paris the intellectual centre of Europe. In their train came a body of writers and illuminators, independent of the monasteries, who shook off the Byzantine fetters before Giotto and Cimabue were born, and produced work of an extraordinary and almost feminine refinement of execution, which is no less attractive than the manly vigour which is more especially English (fig. 3, p. 891). For a while the two countries ran an even race, but by the middle of the 14th cent. the French illuminators had gone far beyond their English rivals, and in the second half of the 15th

* ART IN MSS (Jew.) see p. 872a.

cent. English patrons were so ill-served by their countrymen that they had to send to Bruges and Paris for their painted prayer-books and romances.

To the Italian scribes of the 15th cent. belongs the distinction of having discarded the Gothic or black letter, which by that time had reached a cramped and ugly stage, in favour of the more rounded and legible forms of the 11th and 12th cents., *littera antiqua* as it was called when reintroduced, 'Roman letter' as we now call it (figs. 4, 5, pp. 891, 892). This revival was soon seen to be a reasonable one, and was adopted in all literary countries except Germany, which is only now coming into line with her Western neighbours. It was under the influence of the Renaissance that the finest illuminated books were produced in Italy. These were largely copies of the Latin classics; but many exquisite prayer-books were written, especially in Florence, Naples, Ferrara, and Venice, for members of the great families. Of Spanish illuminated books not many have survived, and these usually owe nearly everything to artistic influences from Naples or Bruges. In the latter city enormous quantities of dainty prayer-books were manufactured towards the end of the 15th century. The chief features of these books are the use of sprays of natural flowers and foliage in the borders, and the delicacy of the landscape backgrounds to the pictures. Dutch books are remarkable at once for great dexterity of execution and for a bluntness of conception which prevents their ever being in the first rank as works of art.

And now as to the types of manuscripts that were most frequently illustrated. With few and mostly fragmentary exceptions, all liturgical books earlier than the 13th cent. have perished, having been worn out, or cast aside on account of changes of fashion and of textual arrangement. It is certain that none of them were habitually so richly decorated as the early copies of the Gospels already referred to. These were always adorned with four frontispieces, usually representing the Evangelists in the act of writing, opposite the four opening pages of the Gospels, on which the text was written in large ornamental letters within an elaborate border. The principal liturgical books of a later date, of which there are many illuminated examples, are Pontificals, Missals, Breviaries, Graduals, and Antiphoners. The great choir-books, such as are shown in the Convent of St. Mark at Florence and in the Duomo of Siena, have survived in quantities in Italy and Spain, where they may still be seen in use. These often contain initials painted by artists of note, but they are for the most part not earlier than the 15th century. Choir-books of Northern origin, especially those of the fine period, are exceedingly rare. The best that exists is an Antiphoner in three volumes written in 1290 for the nuns of the Cistercian Abbey of Beaupré near Grammont (fig. 6, p. 892). This formerly belonged to John Ruskin, and is now (1908) in the collection of Mr. Yates Thompson.

The Vulgate Bibles that have survived from the 12th cent. are usually large folios in two or three volumes, with historiated initials at the beginning of each book, and decorative initials to the numerous prologues. One of the finest examples, a book of surpassing beauty, is in the library of Winchester Cathedral. In the 13th cent. the size of Bibles was reduced, and they were written in enormous numbers and with astonishing skill in France, England, and Italy (fig. 7, p. 893). The entire Bible, including the Apocrypha and perhaps a hundred and fifty painted initials, was often on so small a scale and on vellum of such astonishing thinness as to fit comfortably into the pouch or pocket of the Dominican and other itinerant preachers of the day. So great was the output at this time, that it seems almost to have sufficed until the invention of printing, as Bibles written in the 14th and 15th cents. are comparatively rare. Besides plain texts, portions of the Bible with extensive marginal commentaries were often finely written and illuminated for purposes of monastic study; and in England especially there were produced in the 13th cent. a number of splendidly illustrated copies of the Apocalypse, either in Latin or in French, and usually with an Exposition taken from the writings of Berengaudus. It is easy to see how the strange visions of St. John kindled the imaginations of the creative artists of this time, and with what zest they sought to interpret them (fig. 8, p. 893). In France, at the same period, a type of sumptuous picture-book was evolved, known as the *Bible moralisée*, in which the text is altogether subordinate to the almost countless illustrations. Two copies are in the Imperial Library at Vienna, while a third is divided between the Bodleian Library, the Bibliothèque Nationale, and the British Museum (fig. 9, p. 894).

From an early period the chief book of private devotion was the Psalter. In the 12th and 13th cents. every rich and devout layman seems to have possessed his own copy of the Psalms, to which were invariably added certain Canticles, the Athanasian Creed, the Litany, and a small number of Collects, sometimes followed by the Office of the Dead. It was on these books that the miniaturists, in what was certainly the culminating period of their art, lavished their utmost skill. To the more elaborate copies it was usual to prefix a series of illustrations of the Old Testament, from the creation of the world to the coronation of Solomon, and of the New Testament from the Annunciation to the Last Judgment, which series varied in length according to the wishes and purse of the individual who gave the commission; while the initials of certain Psalms—in early Psalters only Psalms 1, 51, and 101, marking the three divisions into fifty Psalms, and in later Psalters also Psalms 26, 38, 52, 68, 80, and 97, being (with Psalm 1) the first Psalms of the Office of Matins on the seven days of the week, and Psalm 109, being the first of Sunday Vespers—are invariably larger than the rest, and usually historiated with a more or less fixed sequence of subjects. Early in the 14th cent. Psalters of great size and magnificence were written in East Anglia. Among these must be named the Psalter of Robert of Ormesby, monk of Norwich (fig. 10, p. 895), now in the Bodleian Library, and two superb Psalters, both connected with Gorleston, near Yarmouth, one in the Public Library at Douai, and one in the library of Mr. Dyson Perrins.

As early as the 11th cent. certain private offices, the most important being the Hours of the Virgin, the Hours of the Trinity, and the Hours of the Passion, were added to a few Psalters. Later, these accretions came to be written separately, probably in the first instance for the use of women. Their portability and general convenience in this detached form led to their being adopted in place of the Psalter as the devotional book of the literate layfolk; and although there are but few separate Books of Hours of the 13th cent., and not many of the 14th cent., they were produced in enormous numbers in the 15th cent., and copiously illustrated with pictures which in the main illustrate the text (fig. 11, p. 894), but not seldom seem to have been calculated to withdraw the thoughts of the owner from the contemplation of heavenly things. The popularity of these painted prayer-books, of which the greatest number were written in Bruges, Paris, and Florence, was so great that they continued to be produced until long after the invention of printing.

SYDNEY C. COCKERELL.

ART (Egyptian).—The religions aspect of art in Egypt includes almost all that is known of it. The earliest sculptures are tombstones and tables of offerings for the benefit of a deceased person; the earliest statuary is of figures in which the soul of the deceased might reside, made as lifelike as possible, in order to give him satisfaction; the figures of servants with offerings, or of serfs to cultivate the ground, were for service in the next world; the whole of the tomb sculptures, paintings, and furniture—carved coffins, canopic jars, tablets, and all else—resulted from the religious theories of the future life. The buildings that remain to us are nearly all temples; the colossi which stand in them were habitations for the many *ka*-souls of the king; and even the battle scenes on the walls are all part of the display of religious fervour, and culminate in the triumphal processions of captives dedicated to the god, or led by the god as his appanage to be entrusted to the king's administration. The civil life of the lay Egyptian has almost vanished, the palaces and towns are nearly all below the plain of Nile mud; and it is only the sepulchral and religious remains that—being placed on the desert—have thus been preserved to us. Here we must notice only the main principles and examples of religious ceremonies. The page of examples given (p. 896) will illustrate the more important points.

1. Symbolism.—This begins with the rise of the art, as seen on the slate palettes. The various tribes engaged in the conquest of the country are designated by their emblems, the hawk, lion, scorpion, jackal, or pelican. The actions of the tribe are represented by the animal holding a pick and digging through the walls of a town, or by a human arm projecting from the standard on which the animal is, and clutching a cord or grasping a bound captive. The king is represented as a strong bull—as he is called in later times—trampling down his enemies; or the figure of a fish, used to write the name of a king, has two arms grasping a stick to smite his enemies; or the royal hawk has a hand which holds a cord put through the lip of the captive. In these instances it is seen how early symbolism was established as an elaborate means of historic expression. It is not surprising that in the subsequent times it should be commonly used. The kings are shown as being conducted by the gods, who also 'teach their hands to war and their fingers to fight,' standing behind the king and holding his arm in drawing the arrow; the gods place the crown on the king's head, and pour purifying water or blessings over him (see figure of Ramessu IV.); the goddess Hat-hor, as a woman or as a cow, is shown suckling the young king; and Setkhet-abui, the goddess of literature, writes the king's name on the leaves of the Persea tree. The limits between symbolism and dogma pass the critical stage altogether in the Tombs of the Kings, and a state is reached in the other world in which there is no distinction possible.

Special emblems of ideas became so common that they were used almost mechanically, like the cross in Europe. The sun and wings are noticed under ARCHITECTURE (Egyptian), 'Decoration.' And groups of hieroglyphs, such as the *ankh* for life, the *uas* for power, the *zad* for stability, the girdle tie of Isis, and other emblems, were carved as fretworks to stiffen furniture or form a trellis to windows.

2. Divine forms.—The compound theology of sacred animals and deities resulted in a variety of strange combinations. The animal element is always the head, placed upon a human body for a deity; a human head upon an animal body is used only for a sphinx, emblem of a king, and for the *ba*-bird, emblem of a soul. The combination of animal heads on human bodies is found in the second dynasty (Set, on seals of Perabsen) and the fourth dynasty (Thoth, on scene of Khufu); and it became very usual in later times. The combination is skilfully arranged, so that it scarcely seems monstrous; see the scene given (p. 896) of Horus and Thoth, where the short neck of the hawk fits directly on to the human shoulders, while the long neck of the ibis is backed by an immense wig, which after all has no possible support. Yet the effect is far better than could have been expected from such a difficult combination. The forms best known are the ram-headed Khnumu and Hershefi, lion-headed Sekhmet, cat-headed Bastet, jackal-headed Anubis, crocodile-headed Sebek, ibis-headed Thoth, and hawk-headed Horus and Mentu. Besides these, there were many compounded divinities in Ptolemaic and Roman times, formed of a deity and three or four animal parts; usually it is Ptah-Sokar who is thus elaborated. These combinations have none of the convincing dignity of the early animal-headed gods.

3. Dress.—The gods are usually clad in the oldest form of close-fitting waist-cloth; it is always older forms of dress that are thought appropriate for religious or artistic purposes, and in Babylonia the oldest figures of worshippers are entirely nude. The gods never wear the projecting peaked waistcloth common in the Old and Middle Kingdoms. Another primitive piece of costume was the animal's tail, hung at the back from the belt. This is shown as a bushy tail, like a fox's, on the archaic hunters, carved on a slate palette. It appears on all kings from the first dynasty onward (see the figure of Ramessu IV. [fig. 2, p. 896], and the kneeling Hatshepsut, where it is brought forward). And it gradually becomes almost universal for gods after the early ages. Here it can be seen on the figures of Horus and Thoth, in the long form, and thinner than usual.

The principal religious dress was the leopard skin, as on the priest in the scene of sacrifice (fig. 1, p. 896). It was worn from before the first dynasty (Narmer), and is seen not only on scenes, but also on statues in the eighteenth dynasty. It is shown on the priests when seated, or standing giving directions, or making offerings; it might be worn over a short kilt or over a long muslin dress.

4. Ceremonies.—The four chief ceremonies selected for illustration (p. 896) are Sacrifice, Offering, Laying on of Hands, and Purification.

(*a*) *Sacrifice*, as among the Semites, was the ceremonial killing of an animal for food; but there is no trace of the burning of the fat, or of the other form of whole burnt-sacrifice. In the early sculptured tombs the sons of the deceased are shown as trapping the birds, and sacrificing the ox, for the festival in their father's honour. It is rare to find representations of sacrifice later, such as this example of the nineteenth dynasty. Burnt-sacrifice was a foreign importation, and is only known in picture at Tell el-Amarna (eighteenth dynasty), and in description at the Ramesseum (twentieth dynasty).

(*b*) *Offering* is the most usual religious subject. The offerings are heaped together on a mat, a slab on the ground, or a pillar-table; in this case a mat is represented, bound with thread at the middle and the two ends, a form which originates in the third dynasty or earlier, Upon the mat is a layer of round thin cakes, much like the modern flap bread, with two circles of seeds stuck in each. A layer of joints of meat (?) follows; then three wild ducks; above, a row of gazelle haunches, upon which are three plucked geese. The whole is covered with a bundle of lotus flowers and a bunch

of grapes. The queen is pouring out a drink-offering from a small spouted vase in the right hand. Such drink-offerings were of a great variety of wines and beers, as also milk, and water. In her left hand she holds an incense-burner. The Egyptian never burnt incense on an altar, but always in a metal censer held in the hand. It was a long metal rod, with a hand holding a cup for the burning incense at one end, and a hawk's head at the other end; in the middle of the length was a pan or box in which the pellets of incense were kept ready for burning. The heat requisite to light it was obtained by using a hot saucer of pottery placed in the cup, on which the resin fused. When the incense was burnt, the saucer was removed and thrown away, and thus no cleaning was required for the metal cup.

(*c*) *Laying on of hands* was represented as being done by the gods, in order to impart the *Sa*. This was a divine essence which the gods drank from the heavenly 'lake of the Sa,' and which the earthly images of the gods could impart to beings and to priests who knelt before them. The benefit was not ceaseless, but required renewal from time to time. The same form of laying on of hands was used, as in our illustration, for conferring the kingship; the inscription reads, 'giving of the kingship of both banks of the river, the complete office, to his daughter, Maat-ka-ra' (Hatshepsut).

(*d*) *Purification* was a very important idea to the Egyptian. A whole class of priests were devoted to the purification of places and things; and it was always represented by a stream poured out. Personal cleanliness was strictly observed by the priests; and the purifying of the king was performed symbolically by the gods, as shown on p. 896. Each god holds a vase from which he pours out a stream over the king. It is stated that Ramessu 'is purified with life and power.'

5. Furniture.—The main object in a temple was the sacred boat of the god, one of the best examples of which is shown on p. 896. The boat was a model intended to be carried on the shoulders of the priests; it rested, therefore, on two long poles, and when stationary was placed upon a square stand, so as to allow of the priests taking their station beneath the poles (see ARCHITECTURE [Egyptian], § 5, where the boat and shrine are described). This boat was probably made of wood, plated over with sheets of electrum or gold. The extent to which gold was used is hardly credible to us, who see only an excessively thin film used for gilding. Even in the 11th cent. the Countess of Sicily had the mast of her ship covered with pure gold; and the Egyptian often describes large objects as covered with gold, which was usually of considerable thickness. The reliefs were usually worked in hard stucco and then thickly gilded and burnished. The art of high burnishing upon a stucco base was kept up till Roman times. The sets of vases for the purification ceremonies and further libations of wine were kept on wooden stands, as shown below the boat. At the side of them is a stand with water jars, covered with lotus flowers, and with bunches of grapes placed below it. On another stand at the extreme left is a figure of the king kneeling, offering a large *ankh*, or sign of life; this is crowned with flowers, and has convolvulus and vine growing up beneath it. Another stand at the extreme right has a figure of the king offering a large bouquet of flowers. A main part of the religious art was spent on these statuettes of the king making a great variety of offerings. Unhappily all this wealth of figures has perished, and only a few fragments remain to give reality to the innumerable pictures of the temple riches shown upon the walls.

W. M. FLINDERS PETRIE.

ART AND ARCHITECTURE (Etruscan and Early Italic).—One can hardly speak of Italic art in connexion with the rude products of the Stone Age, even though some of the Neolithic weapons and implements in polished stone show a high degree of perfection in their way; the beginnings of a higher civilization appear more or less simultaneously in the whole country, varying in type according to the different races that inhabited the peninsula. The chief types are as follows:

1. *The 'terramare' of northern Italy.* — These are villages built upon platforms supported by wooden poles sunk into the muddy earth, a type of dwelling created for marshy districts, and frequent upon the shores of the lakes of Central Europe. From there the type spread not only down the marshy valley of the Po and its tributary rivers, but also farther south to the confines of the Emilia, and even, if we may judge by an isolated example, as far as Tarentum. What had originally been a method of building called for by the conditions of the soil was preserved and followed with religious care even in dry and mountainous regions. An invariable rule, evidently sanctioned by the religion of these 'terramaricoli,' in whom we may see the first Italic race on Italian soil, regulated the shape of these villages—a trapezoid space enclosed by a rampart of earth and by a moat, carefully orientated, accessible by a single bridge; the round huts inside were disposed in blocks, intersected by two main paths running at right angles to each other and to the ramparts, while, on the eastern side of the village, a rectangular space was reserved, evidently for the dwelling of the chief and the sanctuary or altar of the gods. The close resemblance of these arrangements to the shape and disposition of the Roman military camps is evident, and speaks for community of race; but the 'terramare' are many centuries older. The refuse accumulated under the huts contains rude pottery, numerous stone and bone implements, but only a few rare objects of bronze, which was evidently far from common at that time. The bronze fibulæ, found occasionally, allow us to assign to these primitive villages, roughly speaking, a date between 1500 and 1000 B.C. The cemeteries are simply reduced imitations of the living tribe's dwelling—miniature villages guarded by moat and rampart—rude earthen jars filled with the ashes of the dead taking the place of the huts. We find abundant traces of agriculture, a little commerce, and, if the 'terramare' of Taranto is really akin to the northern settlements, evidence of relations with the Ægean, in the shape of Mycenæan sherds and clay idols. No trace of writing has been discovered.

2. At about the same time, a more highly developed civilization was spreading through *Sicily and southern Italy*. We know these tribes, the Sikels, chiefly through their tombs, which are usually small chambers cut into the living rock. They often reproduce the shape of the living man's dwelling, either round or oval huts or square houses of wood or bricks and stone. Remains of some stone houses and even of a large building, evidently the seat of some powerful chief (at Pantalica west of Syracuse), have been discovered; and as the tombs were abundantly furnished with the necessaries of life—clay vases often delicately painted, weapons and implements of stone and bronze, and even some ornaments and jewellery of bronze, silver, gold, and ivory—we are able to re-construct, to a certain extent, this Sikelian civilization through several periods of its development. The presence of Mycenæan vases in some of the tombs fixes their date approximately. But the Sikels have no connexion with the contemporary, very much ruder, civilization of the 'terramare.' The

advent of the Greek colonists, after the decline of the Mycenæan sway, early in the first millennium B.C., almost stifled the local art of southern Italy and Sicily, which may be considered, after the 8th cent., simply as a province of Greek civilization.

3. An analogous development of local handiwork appears in *the rock-cut tombs of Sardinia.* Only here it is Phœnicia, not Greece, whose colonies modify the old order, at about the same period. But Sardinia always retains one distinctive feature of architecture, the 'nuraghe,' curious buildings of bee-hive shape, made of roughly hewn stones, sometimes well fortified and of considerable size, with internal rooms and winding passages in several storeys. The date of these buildings has never been sufficiently cleared up, nor is it decided whether they served as dwellings or tombs, or perhaps for both uses. It is, however, undoubted that the older 'nuraghe' must be placed rather early in the first millennium B.C.

4. In northern and central Italy the 'terramare' disappear towards the beginning of the first millennium B.C., and are replaced by *villages of rude huts without poles or ramparts.* We know the civilization of this period merely by its cemeteries, the first of which was excavated at Villanova near Bologna, and has given its name to this civilization. The ashes are buried in clay vases, as in the 'terramare'; but not only are these ossuaries, with their incised geometric ornaments, far more elaborate than the rude pots of the 'terramare'; they also contain, besides smaller vases, a number of weapons, implements, and ornaments far in advance of anything yet known in those parts of the country. Stone implements disappear; iron is used besides bronze—an immense step forward on the path of technical development; amber and ivory ornaments proclaim commercial relations with the north and east. Instead of the usual ossuaries, we often find the ashes of the dead buried in small clay imitations of the living men's huts, which appear to be considerably larger and better built than the primitive dwellings of the 'terramare.' But, in the older Villanova period, there is not yet any trace of writing, or of stone buildings, or of Greek vases. These appear among the natives a few generations later, with the advent of the first really developed civilization in Italy, the Etruscan.

5. The origin of *the Etruscans* is shrouded in mystery. Following the tradition almost universally accepted by ancient authors and corroborated by the archæological evidence, we assume them to have reached Italy by sea, about the 9th cent. B.C., subduing the native races of central Italy, especially the Umbrians, and founding a number of fortified towns, whose confederacy formed a powerful State. An entirely new era begins with them. The villages of rude huts are superseded by strongholds on the hills, protected by strong walls of polygonal or isodomic masonry, which are still standing on many Etruscan sites. These mighty walls of Cære, Cosa, Vetulonia, Volterra, Perugia, and other towns, belong to different periods, the oldest dating back as far as the 8th–7th cent. B.C. They have been constantly repaired in the course of the ages, and at a later date have occasionally, as at Volterra and Perugia, been provided with vaulted gates adorned with sculptured heads or the figures of tutelary divinities in relief. Within the walls, the houses were built mostly of wood, and have therefore perished. But the tombs give us a faithful representation of them. During the first century or two of Etruscan sway in central Italy, the ancient shape of the round hut still forms one prototype of the tombs. But, like the Mycenæan 'bee-hive' tombs, whose influence they seem to show, these Etruscan sepulchres are spacious cupolas of stone, provided, not for the ashes of a peasant, like the rude Villanova (Umbrian) ossuaries, but for families of wealthy warriors and merchants, whose corpses were buried in state, unburnt and surrounded by all they needed in the under world. The finest of these cupolas are found at Vetulonia, south of Pisa—one of the oldest and richest Etruscan cities—at Volterra, and one specially good specimen at Quinto Fiorentino. Other tombs of the same period, instead of the cupola, consist of rectangular vaulted chambers, either built of huge stones or cut out of the living rock, The most famous of the former is the Tomba Regulini Galassi near Cære, whose astonishing wealth of gold jewellery, precious vases and implements, is in the Vatican Museum. A fine example of the rock-hewn tomb was discovered near Veii; it is adorned with the oldest frescoes we know in Italy. These graves are doubly important. They are the earliest monuments that we can *prove* by their inscriptions to be undoubtedly Etruscan; by the Egyptian and Phœnician and Greek objects found in them, their date is fixed in the 8th–7th cent. B.C. The rectangular chambers give us an idea of the Etruscan house of wood or sun-baked brick, and a slightly younger type (7th–6th cent.) introduces us to roomy mansions. These latter tombs are always cut into the rock, and their central hall and side-chambers, with their beamed roofs and carved doorways, with couches and chairs hewn out of the rock, give a vivid conception of what an elegant Etruscan dwelling of the time looked like. Nay, in some cases, at Cære, for instance, we find two storeys above each other. The tombs built of stone blocks are simpler in design, consisting of one, rarely of two rooms, and occasionally, as at Orvieto, grouped in streets and blocks, just like real towns. The architectural forms and mouldings are of the simplest, and betray the imitation of wooden houses in stone. One detail—the doorways narrowing towards the top and surrounded by a rectangular moulding—seems to denote Egyptian influence.

These tombs are without sculptured decoration inside, except for occasional low reliefs upon the doors or the ceiling (chiefly at Corneto, the reliefs showing animals, fabulous creatures and hunters; and some funeral statues in a tomb at Vetulonia); but the mound or tumulus which covers the grave usually bears either a sculptured ornament or a stone stele with the image of the deceased in relief (standing upright in armour or reclining at a banquet), mostly accompanied by an inscription. Lions carved in stone often guard the entrance to the tomb. The walls of the sepulchral chambers are often gaily painted, and these frescoes demonstrate the development of Etruscan art, from the 6th to the 2nd cent. B.C. They and the sculptured sarcophagi also show the preponderant influence of Greek art over Etruscan; for the commercial relations between the two nations were continuous, and the Etruscans, who do not seem to have possessed a strong individual artistic genius, not only bought Greek vases and bronzes by the thousand, so that no tomb, however poor, is without its Greek objects, but also copied these imported works, more or less freely and successfully. Thus, the frescoes of the oldest painted tomb of Veii, mentioned above, show the meaningless medley of animals, fabulous creatures, and human beings which the Greek vase-painters of the 7th cent., especially in Corinth, had borrowed from the contemporary carpets and tapestries. The 6th cent. frescoes of Cære and Corneto show banqueting and hunting scenes, with an occasional marine monster and once a mythological scene, conceived in the style of Ionic art. The same art, debased by provincial Etruscan painters, appears

upon some terra-cotta slabs with paintings of sacrificial and funeral rites, which adorned the walls of a tomb at Cære. Occasionally, towards the end of the 6th cent., the banquets (they are the Elysian banquets of the happy dead) are replaced by frescoes showing funeral rites, dances, mourners, games, and fights, in which local Etruscan customs are rendered in a debased Greek style. These frescoes, especially those of a tomb at Chiusi, are full of interesting details—wrestlers and acrobats, dwarfs and tame animals. Early in the 5th cent. Attic models take the place of the Ionic or Corinthian ones; Attic vases of the red-figured style illustrate this new fashion in Etruscan painting. Banqueting and funeral scenes continue to be in vogue. In the 4th cent., still under Attic influence, the frescoes take more to religious subjects. A tomb of Corneto shows us the trembling soul in Hades, amid the terrific images of the famous sinners of Greek mythology, bearing their eternal torments. The kinder artist of a tomb of Orvieto lets the dead partake of a sumptuous banquet in the very palace of Hades, who presides with Persephone, before a sideboard laden with golden vessels. The gods and heroes are Greek, even to their names, which can easily be recognized in their Etruscan travesty; the style is wholly Greek, and it is only in certain ritual details, in the winged Fates (Lasa) who call the dead to Hades, in the curious monstrosity of Charun (=Charon), the infernal boatman, that the Etruscan artists have abandoned their slavish imitation of Hellenic imagery.

The same dependence is apparent in the sarcophagi which contain the corpses, where these are not simply stretched upon rock-hewn benches. In the 6th cent., some terra-cotta sarcophagi from Cære bear the figures of the dead man and his wife reclining together on their couch at dinner, according to Ionic custom, and in a style copying the Ionic. A century later, upon a stone sarcophagus from the Chiusi district (in the Florentine Museum), we see the same couple, Attic in style, the wife sitting at the feet of her reclining husband, as was the custom for a proper Attic lady. The old Umbrian custom of burning the dead, which had been in abeyance, though it never disappeared entirely, during the first five centuries of Etruscan sway, again became nearly universal with the end of the 4th cent.; the long sarcophagi for the outstretched corpse are replaced by short square urns sufficiently large for a handful of ashes. And while the figures reclining upon these urns are merely hideously deformed pieces of provincial work, the reliefs which adorn the front copy Attic paintings, of which little sketches must have been brought to Etruria in great numbers; this explains the contrast between the fine composition and the rough execution, so noticeable in the reliefs of these urns, and also the preference for Greek mythological scenes, some of them local Attic myths, which neither the Etruscan 'artist' nor his clients can have understood. The painted tombs grow very rare in this late period, but the shape and disposition of the chambers remain almost unchanged, as is proved by two excellent examples —the Tomb of the Volumnii near Perugia, with its fine architectural moldings and good stone urns, and the Tomba dei Rilievi at Cære, decorated with brightly painted reliefs of various implements and weapons. Both these tombs have Roman inscriptions combined with Etruscan ones, and belong to the last period of Etruscan art—the 2nd–1st cent. B.C. After this period, the Etruscan civilization was entirely flooded by the Roman.

The tombs have helped us to re-construct the Etruscan temple; the sites of several have been found, but as they were built of wood, it would have been impossible to divine their shape without the architectural analogies of the rock-hewn tombs, of which some, at Castel d'Asso and Norchia near Viterbo, show fine façades, with columns crowned by sculptured pediments. A couple of cinerary urns in the shape of small temples or chapels are equally important witnesses; but the most precious are the numerous terra-cotta figures and reliefs which decorated these wooden temples. The oldest, from Cære, Falerii, and Conca [the two latter places are in the lower valley of the Tiber outside Etruria proper; but Latium at this period was artistically under the sway of the higher Etruscan civilization], date back as far as the 6th century. They are antefixes (outer roof-tiles) decorated with reliefs, heads of nymphs and satyrs, of Herakles and the cow-horned Io, groups of dancing mænads and satyrs—all in the same Ionic style which we noted in the frescoes. And the same fashion is apparent in the terra-cotta slabs with friezes of warriors and chariots, of animals and hunters, of banquets, or merely of fine palmetto and lotus chains; these slabs protected the wooden rafters, the upper line of the wooden wall, against the rain. The decorative terra-cottas follow the development of the frescoes, in their style, from the 6th to the 3rd century. In the latter half of this period, pediment sculptures in terra-cotta are added to the antefixes and friezes. Some very fine 4th cent. figures of youths and maidens came from the Faliscan region (now in the Villa di Papa Giulio in Rome). The death of Amphiaraos and the flight of Adrastos before Thebes are given in a pediment from Telamone near Pisa, with very numerous small figures (3rd cent., now in Florence); and the pediments from Luni, also in Florence, appear to render the myth of the Niobids, in their large, admirably modelled figures. Altogether, these terra-cottas are the finest works of art that Etruria has produced, again following in the tracks of Greece. We cannot make sure of the appearance of the Etruscan temples in all their details; but we may safely say that they were mostly of modest size and simple decoration, consisting of a wooden house, oblong, with one or two rooms, and an open porch supported by wooden columns, the whole resembling the Greek 'templum in antis,' yet different in style. We may imagine the walls painted; and the terra-cottas, also brightly coloured, must have produced a rather gaudy effect. The description of the Etruscan temple by Vitruvius helps us also. But our materials for actually re-constructing these buildings in their original shape are too scanty as yet.

In the minor arts, as in painting, the influence of Greece was predominant. Among the very numerous bronze statuettes found in Etruscan tombs it is often difficult to distinguish between imported Greek originals and local imitations. The same doubt obtains concerning bronze statues like the Capitoline wolf. But it would be going too far to attribute only the inferior work to Etruscan artists; they seem to have been largely dependent upon Greece for inspiration, but their skill was nevertheless recognized in Athens itself, where Etruscan bronzes adorned the houses of the richest patrons of art (Pherekrates *ap.* Athenæus, xv. 700*c*; Kritias, *ib.* i. 28*b*). Etruscan bronzes were famous in Greece, and, we may say, justly famous, judging by a number of really fine works of a greater realism than is usual in Greece. Here again the Ionic style is paramount in the older work—the statuettes, vases, and implements of the 7th–6th centuries. The first merchants who traded with Etruria hailed from the Ionic colonies of Asia Minor, and their intimate connexion with the Phœnicians explains the presence of numerous Syrian and Phœnician objects—vases, ornaments,

and scarabs—in the oldest Etruscan tombs, since no direct connexion between Phœnicia and Etruria has been proved. In the later period, Attic influence again predominates, and is especially noticeable in the very numerous engraved mirrors and circular cists (toilet boxes) of bronze, some of them very beautiful, which are most nearly akin, in their style, to the reliefs of the later cinerary urns, though superior to these. Etruscan jewellery, at least in its older stages, is a great deal more independent. In fact, Greece offers nothing comparable, in technical skill and delicacy, to the wonderful gold ornaments, the gossamer filigree work, the microscopic granulations, of the bracelets, necklaces, ear-rings, and fibulæ of the oldest Etruscan tombs. The more recent ornaments show a stronger Hellenic influence, and a less perfect workmanship. Ceramic art is always more or less subservient to the more valuable metal vases. Thus, the shapes of Etruscan clay vessels reproduce bronze models, and as these models are more or less copied from Greek originals, the same imitation is apparent in the cheaper terra-cotta ware. But the technique of these vases is more independent; they are fashioned in black clay, called *bucchero*, adorned with incised or relief ornaments or figures; and though this technique is not infrequent in Greece, and again more especially in the Ionic colonies of Asia Minor, yet its predominance in Etruria is so great that only a slight Greek influence upon a strong local industry may here be granted. Painted vases are rare in Etruria, and are no more than poor copies of Ionic, Corinthian, or Attic originals; but *bucchero* may be claimed as mainly a native achievement.

Very little can be said of decorative work in ivory, or of engraved gems. Here again foreign, and chiefly Oriental, influence predominates, and the Etruscan artists have added little of their own. Even the types of their coins are merely derivatives from the superior Hellenic art.

Etruscan art and science were paramount during the earlier centuries of Roman history, throughout the whole of Latium, and even as far south as Campania. When the Greek colonies of Magna Græcia grew strong enough to hold their own, and the Etruscans were driven from Campania, towards the end of the 5th cent. B.C., their intellectual sway over Rome diminished steadily as the Greek influence increased. After the league of the Etruscan cities had been subjected to Rome, their peculiar civilization dwindled and disappeared rapidly, and it would be difficult to find a characteristically Etruscan work of art later than the 1st cent. B.C.

G. KARO.

ART (Greek and Roman).—The history of Greek art, in relation to religion, passes through three phases which correspond more or less to its three periods of rise, perfection, and decadence. During the first period, art is subjected to religious influences, and frequently trammelled by religious conservatism; during the second, the two act in co-operation, art drawing its highest inspiration from religion, and itself contributing to the dignity of religious ideals, so that it was said of the Olympian Zeus of Phidias, 'cuius pulcritudo adiecisse aliquid etiam receptæ religioni videtur'; during the third, religion supplies numerous themes to the artist; but these often tend to be regarded, mainly or in part, as affording an opportunity for his skill in characterization or execution; and even when this is not the case, he often repeats the conventions of earlier artists rather than creates a new embodiment of a religious idea. It follows that the history of art in Greece is, throughout the course of its development, closely bound up with the history of religious thought—more so, perhaps, than in the case of any other nation, but the relations of the two vary considerably at different periods.

1. **Pre-Hellenic Art.**—Before dealing with Hellenic art, it is necessary to say something of the art which preceded it in Greek lands, and which is conveniently named Ægean, so as to include Crete and the Archipelago, as well as the mainland of Greece. Our knowledge of the Ægean religion (*q.v.*) is gained almost entirely from the remains of early art in these regions. The chief branches of this art consist of gem-cutting, the art of the gold- and silver-smith; painting on terra-cotta coffins and vases, and in fresco on the walls of houses and palaces; and sculpture, or rather modelling in terra-cotta and other materials, including life-sized coloured reliefs in *gesso duro*. Early Ægean art in all these branches shows a strong and characteristic native development, though it owes something also to foreign influences, notably to that of Egypt. It is marked by much naturalism in detail, especially in plant and animal forms, together with a curious conventionalism, especially in the treatment of the human figure, which has an unnaturally slim waist and elongated limbs. The article ÆGEAN RELIGION shows what subjects are treated in the art of the time. We find representations of shrines and altars, and of aniconic symbols of worship, such as the double axe and the horns of consecration, and an almost realistic rendering of landscape in the representations of sacred mountains and trees. Grotesque animal forms and monstrous combinations are a favourite subject, especially on gems. We also find figures which are probably to be regarded as representations of divinities, though the skill of the artist is not sufficient to indicate any difference between these and human figures, except by signs or attributes. Rudely-fashioned images of terra-cotta, which are almost certainly to be regarded as figures of deities, are found in Crete, and are also common at Mycenæ and elsewhere in Greece.

2. **The 'Dark Ages.' Art in Homer.**—Between this early Ægean art and the rise of the art which may properly be called Hellenic there is a long interval of time; nor is it possible, except in a limited degree, to trace any direct connexion between the two. The two chief qualities of the earlier work are beauty of decorative design and a close observation of nature, within certain limits. In both these respects its facile and even decadent

quality, in its later examples, offers the strongest contrast to the uncouth but promising beginnings of Hellenic art. Without discussing the complicated question of the racial changes that had taken place in the interval, we may admit that the innate artistic genius, of which we see the products in early Ægean art, may, after lying dormant for a time, have contributed its part to the later development, but in conjunction with new elements which entirely transformed its character. In this connexion it must be remembered that the rise and earlier stages of the development of early art in Crete and the Ægean islands go back to at least the third millennium before our era, and that the flourishing period of Cretan art ends with the destruction of the palace at Knossos about B.C. 1400, though at Mycenæ and elsewhere on the mainland of Greece a kindred art survived for two more centuries in vigorous condition, and considerably longer in a decadent stage. The rise of a strong and independent Hellenic art cannot be dated earlier than about the 7th cent. B.C. The five centuries or so which intervened are sometimes called the 'dark ages' of Greece—a time of invasions and migrations, when the old civilizations were overwhelmed, and the country relapsed for a time into comparative barbarism, so far as the external surroundings of life were concerned. It was during this time that the Homeric poems were composed; and in them there is no certain reference to any work of sculpture in the round, whether representing human personages or gods, with the exception of a doubtful passage in *Iliad*, vi. 92 and 303, where the Trojan matrons place a robe 'upon the knees of Athene.' Some authorities regard this as implying the existence of a seated statue; if the expression be not a purely metaphorical one, it is the only example of any such thing in the Homeric poems. Though temples are often mentioned, no images of the gods are referred to. Art in Homer is purely decorative, and is not distinctively Hellenic; many of the objects of finest workmanship are attributed to the Phœnicians. When scenes of an elaborate nature are described, as on the shield of Achilles, there are none of religious significance among them, though Ares and Athene are spoken of as appearing in a battle scene. Here, however, it is the gods themselves that are thought of, rather than artistic representations of them.

3. Beginnings of sculpture.—Many primitive images of the gods were attributed to the Heroic age; an example is the Palladium stolen by Odysseus and Diomed from Troy—a tale told in the 'Little Iliad,' of about the 7th cent. B.C. Some of these may have been survivals from pre-Hellenic times; others were probably wrongly assigned to so early a date. Some of them were attributed to Dædalus, an artist whose historical existence is doubtful, but whose reputed attainments summarize the sudden advance in the art of sculpture which seems to have taken place about B.C. 600. Shortly after this date we find several sculptors, or groups of sculptors, employed to make images of the gods, sometimes, apparently, as a new departure, sometimes to replace a primitive or aniconic object of worship. Such families of artists existed in Chios (Melas, Micciades, Archermus) as workers of marble, and in Samos (Rhœcus, Theodorus) as workers in bronze. In the Peloponnese, many statues of the gods were made by Dipœnus and Scyllis, Cretan 'Dædalids,' and by their pupils; the 'unshaped plank' which had served as the symbol of the goddess Hera at Samos was replaced by an image made by Smilis of Ægina; the Apollo of Delos was made by Tectæus and Angelion, said to be pupils of Dipœnus and Scyllis; and probably most of the other early images of the gods in human form were made in this period. From this time on we hear of numerous statues of the gods, made by almost all the chief sculptors; some of these were intended to replace more primitive images as objects of worship, others merely for dedication. In the former case the artist would in most cases be bound by religious conservatism not to depart too far from the accepted type. An example is the Black Demeter of Phigalia, whose primitive image, with a horse's head, had been destroyed; the sculptor Onatas of Ægina is said to have replaced it with remarkable fidelity, with the help of copies, and even of a vision. This is an extreme instance, but in many other cases the artists had to satisfy the religious scruples of priests and others, as well as the growing desire for a more artistic representation of the deity. In the case of dedicated statues he would naturally have a freer hand. Here the limitations would be imposed by his art. We have many statues of early Greek workmanship preserved, and these show that sculpture was confined to a small number of clearly marked types, which served for representations alike of deities and of human beings. The commonest of these types represented a fully draped seated figure, a nude standing male figure, or a draped standing female figure. All of these were used alike for figures of the dead set up over graves, for figures of worshippers dedicated in sacred places, and for images of the gods. The artist devoted his skill to perfecting these types, to getting more approach to a natural expression in the face, to improving the shape of limbs and hands and feet, to observing and recording correctly the position of bones and muscles in the body. He was too much taken up with these matters to give much attention to the representation of character or individuality, much less of a worthy ideal of the gods, though it was by his work that the tradition was being built up which enabled the masters of the 5th cent. to progress in this direction. Some other early types, however, offered an opportunity for a more direct and simple expression of divine energy. Sometimes swiftness was shown by wings, usually borrowed from decorative Oriental models, and by a position which looks like kneeling, but is meant to represent rapid running or flight; sometimes the god or goddess was shown striding forward rapidly, with an attribute of power—if Zeus, a thunderbolt; if Poseidon, a trident; if Athene, a spear—in the raised right hand. Such purely external expressions of divine activity seem often to have been derived from primitive images, which were incapable of expressing it in any subtler manner; and although some examples of this type were made, nsually to carry on a religious tradition, even in the 5th cent., it gradually became obsolete as the artist acquired facility in expressing the character and power of the god under an intellectual and moral rather than a merely physical aspect. When this change had come about, the relations of art and religion were revolutionized. The sculptor no longer occupied himself with the technical problem of providing a statue suitable in age, sex, and attributes to the requirements prescribed by religion, but was himself able to contribute something to the ideal conception of the deity.

4. Decorative and minor arts.—So far we have considered only sculpture in the round, having as its province the making of independent statues. Minor works in bronze and terra-cotta, which were abundant on all Greek sites, naturally followed the development of sculpture, or to some extent, perhaps, even anticipated it; but what is said of sculpture applies to them also. It is otherwise with reliefs and other decorative works, whether in wood, stone, marble, terra-cotta, bronze, or other metals. So far as their religious signifi-

cance is concerned, this group of objects goes with painting, especially vase-painting; it deals with the same kind of subjects, and treats them in the same manner. This decorative art affords a link, such as is missing in the case of sculpture, with the earlier periods; for it continued to be practised to some extent during the dark ages between Mycenæan and Hellenic art; it transmitted some inherited types, and it borrowed many others from Oriental or other foreign sources. It is also of considerable importance for the study of religion and mythology, since the means at its disposal enables it not merely to represent figures of the gods and heroes, but to record or to illustrate stories about them, or scenes connected with their ritual. It is to be observed that descriptions of decorative reliefs in the Homeric poems—notably that of the shield of Achilles, which, even if later than the rest of the *Iliad*, is earlier in date than the rise of Hellenic art—do not refer to mythological scenes, but to incidents of daily life. On the other hand, the Hesiodic 'shield of Hercules' has a whole series of illustrations of mythical tales, such as the battle of Lapiths and Centaurs and the flight of Perseus from the Gorgons. In this respect it resembles actual works of decorative art that are recorded for us by ancient writers, such as the throne made by Bathycles of Magnesia for the Apollo at Amyclæ, or the chest of the Corinthian tyrant Cypselus, dedicated in the Heræum at Olympia. And the subjects recorded both on the imaginary and on the actual reliefs are just the same as we constantly find upon extant early works of decorative art—both reliefs in marble or stone or bronze or terra-cotta, and paintings upon vases. It appears, therefore, that, while the art referred to in the Homeric poems has nothing Hellenic about it except the poet's imagination, the references to works of art in Hesiodic poems and in later literature are closely in touch with the actnal development of art in Greece.

The relation of art to popular belief and to literature, in its treatment of religious or rather of mythological subjects, is somewhat complicated. The decorative artist was extremely conservative and imitative in the use of his available répertoire of groups and figures. Free invention was hardly ever resorted to, except in cases where no already familiar type could be borrowed or adapted. For example, the judgment of Paris seems to offer a theme for imagination, and we find it so treated on later vases; but in early art it always takes the form of a procession, with the figures more or less differentiated; and this form is borrowed almost without modification from the procession of dancing women, headed by a musician, which is a common subject on the most primitive vases. Such mechanical repetitions may appear at first sight to preclude any strong influence of art on mythology; but in some ways their cumulative effect was greater than any that could have been due to originality of treatment, for it became almost impossible for people to figure these scenes or events to themselves in any other way than that conventionally accepted. And, moreover, the same conditions tended towards the assimilation and even identification of legends originally distinct, and so facilitated the systematization of Greek mythology. Again, the tendency of early Greek art to adopt rather than to invent led to many almost fortuitous identifications that have had great influence, not only on later art, but even on later belief. Thus the gorgon, the sirens, the sphinx, and other such monsters probably had no distinctive form in the eyes of those who first told tales about them; certainly no such form is indicated in the Homeric poems. But the early decorative artists borrowed from the East many monstrous forms of winged and human-headed beasts and birds which had probably no particular significance to those who first adopted them as decorative elements; and these forms came to be identified with the creatures of Greek myth so completely and so finally that we at the present day cannot think of Sphinx or Siren under any other form. The fact that both these fantastic figures appear as symbols of death upon tombs in Greece, in Lycia, and possibly elsewhere also, has further complicated the influence of the borrowed type, so that, in these cases and in others like them, it is now almost impossible to disentangle the contributions of art and of myth to the common conception.

5. Vase-painting.—The more technical side of the early development of decorative art in Greece concerns us here mainly as it affects the gradnal acquisition of greater power of expression. In this matter sculpture in relief has much the same history as sculpture in the round, so far as the execution of individual figures is concerned. Vase-painting, on the other hand, has an independent development. It is impossible here even to sketch the development of early vase-painting in Greece; it is possible only to mention those classes of vases which are of most importance for the representation of mythological scenes. (1) The *geometrical* class, which succeeds the Mycenæan in Greece, frequently depicts scenes from actual life; this is particularly the case with the Dipylon vases of Athens, on which we see elaborate funeral processions, scenes of seafaring and combat, and classic dances; but few, if any, of these can be given any mythological significance. (2) The geometric period is succeeded by that of *Oriental* influence in various parts of the Greek world. On the coasts and islands of Asia Minor, especially in Ionia, Samos, and Rhodes, we find various classes of vases, which have certain characteristics in common, as well as clearly-marked local variations; and about the same time we find a similar development in some of the chief manufacturing centres in continental Greece, mainly at Corinth and Chalcis; and colonies such as Daphnæ and Naucratis in Egypt, and Cyrene in Libya, have each their characteristic ware. Athens also has its own pottery at this time, in succession to the Dipylon ware. The technical development varies considerably, but in all alike the tendency is towards an improvement both in the colour of the ground and of the pigment in which the figures are drawn. As a rule, in earlier examples the ground is of a buff or brownish colour, sometimes almost white, and the pigment is of a dark brown colour, varying from red to dull black. In late examples, and, above all, in Attic pottery, the ground tends to assume the beautiful reddish terra-cotta colour which is characteristic of Greek vases of the best period, and the pigment to take the form of lustrous black varnish. The monstrous forms, many of them winged, and the other beasts borrowed from Oriental fabrics, tend gradually to be replaced by scenes of some mythological meaning, or, if retained, to acquire a mythological significance; and the human figure, at first introduced as a decorative type like the rest, gradually asserts its supremacy in interest. The treatment of myths upon early vases becomes, so to speak, stereotyped along certain lines, the same figures or compositions being repeated again and again with slight variations to illustrate the same myth, or adapted to the rendering of another myth that lent itself to a similar treatment. In this way the vase-painter contributed in no small degree to the uniformity and systematization of mythology. (3) About the middle of the 6th cent. B.C. the Attic potters, assisted by the excellent clay of the Attic ceramicus, surpassed all rivals. This is the age of what is called *black-figured*

ware, the figures being drawn in black silhouette, and details added in incised lines, with touches of purple or white. We have many vases signed by potters of this period, as well as of the next, which begins in the latter part of the 6th cent., and continues until the date of the Persian wars and a little later. (4) This next period, which overlaps the preceding, is known as the *early red-figured* style, the same pigments being used, but the figures being reserved in the terra-cotta colour of the clay, and the background filled in with the black varnish. In this age we find greater imagination and freedom of drawing; but the old traditions are still closely adhered to, and the advance is in the details rather than in the general conception. We find at this time the most perfect decorative treatment, and the utmost precision of line drawing. As we approach the middle of the 5th cent., we find greater dignity and severity of treatment, probably owing to the influence of the great fresco painters, above all of Polygnotus, who came to Athens and decorated the 'Painted Stoa' and other buildings about this time.

In Athens the work of Polygnotus consisted partly of historical paintings, such as the battle of Marathon; at Delphi his most famous works were the 'Fall of Troy' and the 'Land of the Dead,' and by these he probably exercised great influence on his contemporaries and successors. He was specially noted for the ethical character of his subjects. His paintings have not been preserved, but from imitations of them on vases and from descriptions of ancient writers, we can infer that they consisted of simply-grouped figures, arranged without perspective, and probably conventional in colouring. But the grandeur and nobility of his conception probably contributed in no small degree to the ideals of Greek art in the 5th century.

6. **Sculpture of the 5th century.**—The development of sculpture was at this time very rapid. The great struggle between Greece and Persia led to a new consciousness of Hellenic unity and a new pride in the superiority of Greek over barbarian; and at the same time, the spoils of victory and the offerings to the gods in thanksgiving for the great deliverance afforded both opportunities and themes for the highest energies of the artists. The full effect of these influences was hardly felt at once, and they were combined, in their most splendid manifestations, with the glory of Athens, which, taking the lead at the time of the Persian wars, became under Cimon and Pericles the example and summary of all that was best in Greece. The immediate predecessors of Phidias, though they produced works which were admired by posterity, seem still to have been mainly occupied with the study of the type and the perfection of technique and mastery over material. A statue like the 'Discobolus' of Myron is characteristic of this age; and however great the skill of the artist in dealing with a difficult subject, it is to be noted that he does not go beyond the expression of physical life to that of character or emotion. Even a masterpiece such as the 'Charioteer of Delphi' shows the same restriction of aim. **Pythagoras**, to whom it is probably to be attributed, was noted also for the expression of pain in his limping Philoctetes; but here, as in the wounded warriors of Ægina, it was probably the physical rather than the mental or spiritual aspect of the subject that was rendered. To Calamis, with his nameless grace, we might perhaps look for something more; but we have no certain work of his left, and we are not justified in assuming that he went beyond his contemporaries.

It was reserved for Phidias to fill the forms that had already reached so high a degree of perfection, with an inner life and meaning. His colossal gold and ivory statues have not survived, but we have some copies of them, and probably of others of his statues, and the descriptions of ancient writers; and we can also see the reflexion of his influence in all contemporary and later work. From all this evidence we can infer that his statues of the gods did not merely represent the perfection of the human form in face and figure, but embodied all that was noblest in the Hellenic conception of the gods. He is even said to have gone beyond this, and to have added somewhat to the received religion in his statue of Zeus, which was so worthy of the subject represented that 'he who is heavy-laden in soul, who has experienced many misfortunes and sorrows in his life, and from whom sweet sleep has fled, even he, I think, if he stood before this image, would forget all the calamities and troubles that befall in human life' (Dio Chrys. *Or.* xii. 51, tr. Adam). The Zeus at Olympia was the father of gods and men, full of power and benignity, the common god of the Hellenes. The Athene Parthenos at Athens represented the more intellectual conception of the goddess of Athens, the embodiment of the artistic and literary genius of the people. Statues like these doubtless transcended the ordinary notions of the gods; but they were no mere allegories or personifications; they represented the religious ideals of the whole people, and contributed in no small degree to purify and ennoble these ideals. This new influence of art upon religion came just at the time when the accepted views about the gods and the tales that were told about them were being questioned, and Phidias and Pericles were in sympathy with the most enlightened views; it can hardly be doubted that both artist and statesman had it as their aim to represent the gods to the people as they should be worshipped. From the sculpture that decorated the temples of this period, above all from the sculpture of the Parthenon, we can learn the beauty and nobility of type and the unrivalled skill in execution that supplied the means whereby such an artist as Phidias could express his ideas.

In the latter part of the 5th cent. B.C. there were several other sculptors who followed more or less closely the tradition of Phidias, and made statues of the gods, which, like his work, had a great influence on current religious conceptions. **Alcamenes**, who, after the exile or death of Phidias, was the sculptor most employed upon official commissions in Athens, made famous statues of Hephæstus and Dionysus, of Hera and Athene; **Agoracritus** made the Nemesis at Rhamnus. **Polyclitus**, the head of the Argive school, followed the Argive tradition in his study of the athletic type, and his system of proportions or 'canon' was embodied in a statue, 'The Doryphorus' or spear-bearer, as well as in a theoretical treatise. He also made a great gold and ivory statue of Hera for the Argive Heræum, which embodied the Greek ideal of the goddess, and was placed, by some who had seen it, beside the Zeus and Athene of Phidias. **Cresilas**, a Cretan sculptor who probably came under the influence of both Phidias and Polyclitus, was famous for a statue of a wounded man, and also of a wounded Amazon; he also made the portrait of Pericles, of which copies survive, and which is a typical example of the early portraiture which treats its subject as the ideal statesman rather than as an individual. In all these works we can see the character of the art of the 5th cent., which expressed, as ancient critics tell us, *ἦθος* rather than *πάθος*, fixed type of character rather than varying passions and emotions.

7. **The 4th century.**—The art of the 4th cent. was less abstract and dignified, more human and individual. If Phidias did something to counteract the growing scepticism about the gods by presenting them in a form which could not be rejected as unworthy, the works of **Praxiteles** and **Scopas**

may in some cases have brought the character of the gods home to men by an intense and vivid realization of their personality; but in making them so human these sculptors may have made them less divine, and have opened the way for successors who regarded even statues of the gods as a mere theme for the exhibition of their artistic skill. Early in the 4th cent. we find a conspicuous example of a tendency of which traces may be seen earlier—that to personification. A group by Cephisodotus represented Peace nursing the infant Wealth; and later on allegorical figures such as this, which appealed to the popular imagination, usurped much of the worship that formerly belonged to the Olympian gods. But the statues of Scopas and Praxiteles were for the most part taken from accepted mythology, though the subjects selected were no less characteristic of the time than the manner in which they were treated. The most famous works of Praxiteles represented Aphrodite and Eros; and he set the goddess before mortals with her beauty entirely unveiled; her nudity is not natural and unconscious like that of male figures in Greek art, but a motive for it is supplied in her preparation for the bath. He was also famous for his representation of Dionysus and his attendant satyrs; and from extant copies we can estimate the skill with which he characterized these soulless, half-human creatures of the woods. In the Hermes with the infant Dionysus, of which the original is happily preserved, we can see the mythological conception of Hermes as the protector of youth made to live in a genial and individual embodiment. In other works, such as 'Apollo the lizard-slayer,' we have what was once a religious type treated as a piece of playful *genre*. The work of Scopas is throughout more earnest and impassioned. Extant works that can be associated with him represent heroes rather than gods, but in these we can see a passionate nature and intensity of expression; his treatment of creatures of the sea, with the restless yearning of their nature, is notable; and in his 'Mænad' the enthusiasm of divine inspiration was expressed with wonderful power. Of his treatment of more dignified subjects we can judge from such a work as the 'Demeter' of Cnidus, which, if not from his hand, is certainly to be associated with him; its expression shows maternal grief and the chastened melancholy in a passionate nature. The work of Scopas and his associates may also be seen in the Mausoleum.

Great as was the influence of Scopas and Praxiteles upon their successors, that of the third great sculptor of the 4th cent., Lysippus, was, if not greater, at least more direct. As the head of the school of Sicyon, he represented the Peloponnesian tradition of athletic sculpture; and he established a new canon of proportions, slimmer and less massive than that of Polyclitus. He made many statues of the gods, some of colossal size; and in his portrait of Alexander he is said to have satisfied the king by his representation of his ambitious and fiery temperament. Portraits of Alexander, and other extant works that may be associated with Lysippus, show that he was not, as has sometimes been supposed, an academic master, but full of fresh observation, while in expression he seems to have fallen under the influence of Scopas. Partly owing to his association with Alexander, his pupils are most conspicuous in the next generation, and are the founders of the schools that carried the traditions of Hellenic art to the East. We have records of many other sculptors of the 4th cent. who cannot all be enumerated; among them are Euphranor, who was also a painter and a writer on art, and was noted for his expression of the characters of gods and heroes; and Leochares, who made not only statues of the gods but also a set of portraits of the family of Philip and Alexander in gold and ivory for the Philippeum at Olympia—works which exemplify the tendency to represent men in a manner hitherto reserved for the gods.

The great painters of the 4th cent. are known to us only by literary records; and in this case we cannot, as in the earlier age of Polygnotus, expect any assistance from vases. From the descriptions we learn that the painters of this age often chose dramatic or sensational subjects, and their power of rendering individual character and passion was probably comparable with that of contemporary sculptors. The greatest of all Greek painters, Apelles was, like Lysippus, noted for his portrait of Alexander; and he was also fond of allegorical subjects, such as his group of Calumny, of which a detailed description is left us.

8. Hellenistic art.—In the Hellenistic age Greek art followed the conquests of Alexander to new centres in the East; it is no longer to Athens or Argos or Sicyon, but to Alexandria and Antioch and Pergamos that we look for its most characteristic products. The beginning of the Hellenistic age is dominated by the personality of Alexander. He had changed the relations of East and West, and Greek civilization was henceforth the prevalent influence in western Asia. His career, which might well seem more than human, induced the Greeks to accept the Oriental custom of the deification of kings; and his features came to be repeated even in the types of the gods. His head, too, was placed upon coins—an honour hitherto reserved for the gods alone. And his successors, with a less justifiable arrogance, claimed even higher privileges. Beside such present deities—to use the phrase of contemporary flattery—the ancient gods became mere abstractions. Images of them were still made, distinguished for their size—as the 'Colossus' of Rhodes—or for their artistic excellence. But the old types and conventions were mostly repeated either in mere repetition or in eclectic imitation. Certain schools, inspired by the dramatic power of Scopas, infused some new life into the old forms, notably the school of Pergamos. On the great altar in that city was a frieze with a representation of the gods and giants, in which all the learning of the mythologists and all the technical skill of the sculptors were devoted to a complete representation of the Greek Pantheon in action against their wild adversaries. But the extraordinary dramatic vigour of this work does not hide the fact that it is more or less an artificial creation, not a spontaneous embodiment of the people's belief. While philosophers turned to a more or less abstract and monotheistic conception of the deity, which was out of touch with art, the people often turned to a more direct and intelligible worship, such as that accorded to the 'Fortune' of Antioch, embodied in a graceful representation of the city, seated on a rock with a river-god at her feet, which was made by Eutychides, a pupil of Lysippus. The representation of children or of rustic subjects showed a reaction against the artificiality of city life, parallel to the literary development of the pastoral. Statues of the gods were still made, but were mostly mere repetitions of established types, though occasionally we find examples of great dignity and beauty, such as the Aphrodite of Melos or the colossal works made by Damophon in Messene and Arcadia. In the inadequacy of contemporary art, we find, as often in an age of decadence, a return to the character and even to the mannerisms of early art; in extreme cases this leads to an affected archaistic work which is easily distinguished from that of the early sculptors whom it imitates. At the same time, dramatic vigour and scientific study were still kept up in some schools; and in Rhodes, in the middle of the

1st cent. B.C., there were still sculptors capable of producing such a masterpiece as the 'Laocoon.'

9. Græco-Roman art.—Græco-Roman art—that is to say, the work produced for the Roman market by Greek artists—belongs for the most part to the more conventional and less powerful survivals of the art of Greece. There was an immense demand in Rome for the decoration of public buildings and of private houses, gardens, and libraries with the products of Greek art; and this was met partly by the spoliation of Greek shrines, partly by the production of new work resembling the old nearly enough to please the taste of the patron. Even the statue of 'Venus Genetrix,' set up by Julius Cæsar in his forum and made by Arcesilaus, the most famous sculptor of the day, was a mere repetition of a type which goes back to one of the masters of the 5th century. Under such conditions there was not much scope for originality or for a fruitful relation between religion and art.

10. Roman art.—Roman art had more originality, and made some technical advances even on its Greek models; but, from the religious point of view, these do not much concern us. They are best seen in portraiture, historical reliefs, and decorative work. The old Italian gods did not as a rule lend themselves readily to artistic treatment. There were, indeed, old terra-cotta images of the gods, made in Rome under Etruscan influence, which Cato and other conservatives regarded with veneration, and preferred to the imported products of Greek workmanship. These may have had a certain vigour of individuality and realism which affected later art in Rome, and more especially portraiture. But in the art of Rome, as known to us in Imperial times, there presentations of the gods follow for the most part the types and conventions borrowed from Greece. There were indeed certain figures, above all that of Rome herself, which were new creations; but these followed the lines of impersonation common in Hellenistic art. The art of the Augustan age, though characterized by an austere beauty, was academic and classical in character. Perhaps the finest extant figures of the gods in Roman art are those on the arch of Trajan at Beneventum, which are beautiful and dignified in type, yet so animated with an interest in the action portrayed as to seem full of life. In the deification of the Emperors we also find an incentive to ideal portraiture which did something to counteract the realistic tendencies of Roman art.

Two classes of monuments are of great importance to the general history of art, and even to the transmission of religious ideas. In historical reliefs on columns and arches—above all, in the Trajan and Antonine columns—we find a continuous method of narration which lent itself admirably to the records of chronicle or story; and this method was continued, for didactic purposes, into early Christian and mediæval art. In the sarcophagi also we find a great wealth and variety of resource in the renderings of mythology, often coupled with indifferent execution; and these likewise served as models, and handed on the classical traditions to later art. Types, such as that of Orpheus, also acquired a new significance in Christian art. The Greek traditions, in varying form, survived both in Rome and in Asia Minor, and through them were transmitted to the modern world. The relation and the spheres of influence of the Eastern and Western branches constitute one of the most difficult and disputed problems of modern archæology.

E. A. GARDNER.

ART (Jewish).—1. The arts in which the ancient Hebrews excelled were poetry and music. There are no remains, whether in literary sources or in the actual results of excavation, to warrant the belief that there was in any real sense a native Hebrew painting or sculpture. There are extensive stores of Jewish pottery, but the shapes and styles are derived from Phœnician and Egyptian types, and show some Babylonian influence. In glyptic art, again, the same imitativeness appears. Phœnician and Hebrew seals are much alike 'in shape, script, and ornamentation' (Benzinger). The Phœnicians, too, excelled in metal-working; and the Hebrews, while they do not seem to have early acquired the art of metal-casting, were skilful adepts in the process of overlaying wood with metal plates. This skill presupposes some aptitude for wood-carving, but sculpture as such was not one of the attainments of the Hebrews. It is remarkable how few inscribed stones of Hebrew provenance have thus far been discovered. Religion, which is usually the most powerful aid and stimulant of art, had the very opposite effect in Judaism. The prophetic attack on idolatry carried with it an objection to images, and the representation of any form of animal life was forbidden in the Decalogue. Thus, on the one hand artistic incapacity, and on the other pietistic asceticism, combined to prevent the growth of a Jewish plastic art. And when to these causes is added what Delitzsch terms a defective sense of colour (*Iris*, p. 43 ff.), we can understand that only a rude form of painting was possible. These subjects are treated by Flinders Petrie in Hastings' *DB* i. 157.

2. Art was held in high esteem in later Jewish opinion. In the Talmud (*Rosh Hashana*, 29*b*), art is a branch of wisdom (חכמה) as distinct from mere handicraft (מלאכה). But the old dislike of animal representations continued. The Jewish coins contain no heads of rulers; here, again, the cause was partly religious. And the same phenomenon of imitativeness recurs. If the Temple of Solomon shows Phœnician influence, that of Herod was inspired by Roman models. Most of the Talmudic terms for articles of art are foreign—Greek and Latin. Custom and law are not always identical in these matters. The law forbade only the carving of projecting images (*'Abōdā Zārā*, 43*b*), and Dr. Kohler (*JE* ii. 142) rightly asserts that 'portrait painting was never forbidden by the law.' But many Jews long continued to object to portrait painting. On the other hand, though as a rule the mediæval synagogues were destitute of mural paintings, there are instances of carved lions (as at Ascoli). The lion was a frequently used Jewish emblem. In recent times there has been an increase of ornateness in synagogue decoration, and stained glass windows are becoming common, though there is still a reluctance to admit animal or human forms.

3. But in some directions a specific Jewish art was developed. In mediæval times the Jews acquired great repute as silk-dyers, as embroiderers, and as masters of the gold- and silver-smith's art. The worship of the synagogue and the home required the use of many objects in which artistic taste could be displayed. The Ark, or receptacle of the scrolls of the Law, the mantles in which the scrolls were wrapped, the crowns and bells with which they were adorned, the lamps for Sabbath and *Ḥanukah*, the cups for the sanctification over the wine, the spice-boxes (mostly of a castellated shape) used at the *Habdala*, or separation service, at the close of the Sabbath, the Seder-dishes which were used in the home on the Passover Eve—these are among the most important of the articles which the Jews loved to ornament. Beautiful embroideries were also required as curtains for the Ark. Many fine specimens of all these were exhibited at the Anglo-Jewish Historical Exhibition in 1887, and the Catalogue of that Exhibition remains a valuable source of information on all these matters. An *édition de luxe* of the same Catalogue contains some splendid photographs by Mr. Frank Hars. Throughout the volumes of the *JE* will also be found many pictures of the objects briefly described here, as well as of another branch of art in which Jews excelled.

4. This branch is the illumination of manuscripts. Artistic writing was an art in which Jews were highly skilled, and in the illumination of initial letters and the painting of marginal ornament and grotesques, they acquired considerable proficiency. Though there is no specific Jewish art in manuscript illumination, there are original Jewish elements; as Mr. G. Margoliouth well puts it, the Jewish spirit makes itself perceptible to the eye. In classifying the Jewish illuminated MSS, Mr. Margoliouth takes first the Bible, with two kinds of illumination, (*a*) the Massorah in the form of designs, and (*b*) pictorial and marginal illuminations. Of course all these ornaments are confined to codices or Bibles in the form of books; in the form of the scroll (except in the case of the Roll of Esther) the Bible was never illuminated. The Synagogue does not permit the use, in public reading, of punctuated or ornamented scrolls. The illuminated Esther rolls were hardly meant for use in Divine worship. The most usual Hebrew book for illumination was the Passover Service, or *Haggadah*. This is often profusely supplied with miniatures, initials, and full-page pictures. Less common are illuminated Prayer-Books. But all Hebrew books might be illuminated. The Code of Maimonides exists in many beautiful specimens. A very common object for illumination was the *Kethubah*, or Marriage Contract.

It must be added that in recent times many Jewish artists have attained to fame.

LITERATURE.—Besides the works referred to in the course of the preceding article, see: the publications of the *Gesellschaft für Sammlung von Kunstdenkmäler des Judenthums* (Vienna, 1897 ff.); the *Mittheilungen der Gesellschaft zur Erforschung jüdischer Kunstdenkmäler* (Frankfort, 1900 ff.); *Die Haggadah von Sarajevo*, ed. Müller and Schlosser (Vienna, 1898); Günzburg and Stassof, *L'Ornement Hébreu* (Berlin, 1905); S. J. Solomon, 'Art and Judaism' in *JQR* xiii. 553; G. Margoliouth, 'Hebrew Illuminated MSS' in *JQR* xx. 118; and D. Kaufmann, *Gesammelte Schriften*, vol. i., 1908.

I. ABRAHAMS.

ART (Mithraic).—Oriental monuments of the worship of Mithra are as yet almost entirely wanting. The beautiful sculptures discovered at Sidon (De Ridder, *Collection De Clercq*, iv. 'Marbres,' 1906, No. 46 ff.) date from the 3rd cent. of our era, and cannot throw any light on the first productions of the devotees of the Persian god. We must, accordingly, confine ourselves to studying Mithraic art in the Latin-speaking provinces of the Roman Empire, where a very considerable number of its remains have been discovered. In time they range over about two and a half centuries. The most ancient monument, which is now in the British Museum, dates from A.D. 104 (Cumont, *Mon. myst. Mithra*, No. 65; cf. vol. ii. 546; *CIL* vi. 30728), and the last of them belong to the middle of the 4th century. They therefore constitute a group whose limits in space and time are small, and whose character can be accurately described.

It must be admitted that their artistic merit is much less than their archæological interest, and that their chief value is not æsthetic but religious. The late epoch in which these works were produced destroys all hope of finding in them the expression of real creative power or of tracing the stages of an original development. It would, however, be unfair, acting under the impulse of a narrow Atticism, to confound them all in a common depreciation. Some of the groups in high and low relief (for the mosaics and the paintings which have been preserved are so few and so mediocre that they may be disregarded) hold a very honourable rank in the multitude of sculptures which the age of the Emperors has bequeathed to us.

The bull-slaying Mithra.—The group most frequently reproduced is the image of the bull-slaying Mithra, which invariably stood at the background of the temples (see art. ARCHITECTURE [Mithraic]), and specimens of which are to be found in nearly all the museums. The sacrifice of the bull recalled to the initiated the history of the creation and the promise of a future resurrection. It can be proved (Cumont, *op. cit.* ii. 180 ff.) that these representations of Mithra, whose sacred type was fixed before the spread of the Persian mysteries into the Latin-speaking world, are replicas of an original created by a sculptor of the school of Pergamos, in imitation of the sacrificing goddess Victory which adorned the balustrade of the temple of Athene Nike on the Acropolis (Kekule, *Die Reliefs des Tempels der Athena Nike*, 1881, pl. vi.). The Asiatic adapter has merely clothed the Persian god in the half-conventional Phrygian costume which was associated with a number of Oriental personages (*e.g.* Paris, Attis, Pelops, etc.), and has given the face an expression of suffering which makes it resemble that of the celebrated 'dying Alexander.' 'The emotion that pervades the features of Mithras is rendered with almost Skopasian power' (Strong, *Rom. Sculp.* p. 311).

Certain sculptures discovered at Rome and at Ostia, dating from the beginning of the 2nd cent., still reflect the splendour of that powerful work of Hellenistic art. After an eager pursuit, the god, whose mantle flutters in the wind, has just reached the sinking bull. Placing one knee on its crupper and one foot on one of its hoofs, he leans on it to keep it down, and, grasping it by the nostrils with one hand, with the other he plunges a knife into its side. The vigour of this animated scene shows to advantage the agility and strength of the invincible hero. On the other hand, the suffering of the victim breathing its last gasps, with its limbs contracted in a dying paroxysm, and the strange mixture of exultation and remorse depicted in the countenance of its slayer, throw into relief the pathetic side of this sacred drama, and even to-day arouse in the spectator an emotion which must have been keenly felt by the worshippers.

This work of the Alexandrian period has, moreover, been affected by the Roman schools of art. In some of them is shown in a more or less felicitous manner the care for details which is characteristic of the works of the Antonine period, *e.g.* in a group from Ostia (Cumont, *op. cit.* p. 79, fig. 67) which dates from the reign of Commodus, and a bas-relief from the Villa Albani (*ib.* p. 38, fig. 45). The artist has taken delight in multiplying the folds of

the garments and in rendering more intricate the curls of the hair, merely to show his skill in overcoming the difficulties which he himself had created. A small piece of sculpture discovered at Aquileia (*ib.* p. 116, pl. iii.) is distinguished in this respect by a 'bewildering cleverness of technique.' The delicately carved figures are almost completely detached from their massive block base, to which they are connected only by very slender supports. It is a piece of bravura in which the sculptor displays his skill in producing in a brittle substance the same effects as the chaser obtains in metal. But these comparatively perfect works are rare even in Italy, and it must be acknowledged that the great majority of these remains are of discouraging mediocrity, which becomes more and more wide-spread towards the 4th century.

The Dadophori.—The group of the bull-slaying Mithra is almost always flanked by two torch-bearers, or *dadophori*, who were called *Cauti* and *Cautopati*. Dressed in the same Oriental garb as Mithra, one of them holds an uplifted, and the other an inverted, torch; they doubtless personify the sun at the equinoxes. The original of these two youths can be traced back, like that of the bull-slaying god, to an unknown sculptor of the Hellenistic age, who had drawn his inspiration from still more ancient models (Cumont, *op. cit.* i. 203 ff.); but this hieratic work, which did not afford scope for the expression of keen emotions, is of much less artistic worth. Yet, in the better specimens at any rate, one may notice the artistic advantage which the artist has been able to derive from the Phrygian dress, and the way in which he has been able to emphasize the different emotions of hope and sadness depicted on the faces of the two youths who are mutually contrasted. The most remarkable reproduction which we possess of this divine pair consists of two statues found near the Tiber, one of which has been taken to the British Museum, while the other is in the Vatican. They certainly date from the time of Hadrian (*ib.* 27 and pl. ii.).

The Mithraic Kronos.—The origin of the subjects just mentioned is to be found in ancient Greek art, but there is another Mithraic work which is certainly derived from an Oriental archetype. It is the lion-headed god, whose body is embraced by a serpent, and who personifies Eternity—the *Zrvān Akarana* of the Persians (see art. MITHRAISM), to whom the adherents of the sect used to give the Greek name Kronos, or the Latin Saturnus. The most celebrated specimen of this type is in the Vatican (Cumont, *op. cit.* 80, fig. 68). Like the majority of his compeers, this animal-headed monster is an exotic creation. His genealogy would carry us back to Assyrian sculpture (*ib.* i. 74 ff.). But the artists of the West, having to represent a deity entirely strange to the Greek pantheon, and being untrammelled by the traditions of any school, gave free course to their imagination. The various transformations which this figure has undergone at their hands were actuated, on the one hand, by religious considerations, which tended to complicate the symbolism of this deified abstraction and to multiply his attributes; and, on the other hand, by an æsthetic solicitude which tended to modify as much as possible the grotesqueness of this barbarous figure, and gradually to humanize it. Ultimately they did away with the lion's head, and contented themselves with representing the animal at the feet of the god, or with placing the head of the beast on his breast. This lion-headed god of Eternity is the most original creation of Mithraic art; and if it is entirely destitute of charm, the grotesqueness of its appearance and the suggestive accumulation of its attributes arouse curiosity and provoke reflexion.

We have, so far, confined our attention to the remains found in Rome and Italy, the artistic finish of which surpasses the average of the Mithraic ex-votos. But when we pass to the provinces of the Empire, we find there elaborate works of a very different kind. It is generally agreed that, during the Empire, a great number of the sculptures intended for the provincial cities were made at Rome, or by artists who had come from Rome (Friedländer, *Sittengeschichte*[3], iii. 280 f.) This is probably the case with certain of the sculptures we are considering; they come from distant studios, either those of the capital or even of Asia Minor or some other province. There is no doubt that certain tablets discovered in Germany were brought from quarries in Pannonia (Cumont, *op. cit.* i. 216). Nevertheless, the great majority of Mithraic remains were undoubtedly executed on the spot. This is obvious in the case of those which were sculptured on the surface of rocks, which had been smoothed for the purpose; but with regard to many, local workmanship is proved from the nature of the stone employed. Moreover, the style of these fragments clearly reveals their local origin. The discovery of so many Mithraic works has thus great importance for the study of provincial art under the Empire. The most remarkable of these works have been brought to light in the North of Gaul, or, more precisely, on the Rhine frontier. It seems that the whole of this group of monuments must be ascribed to that interesting school of sculpture which flourished in Belgium in the 2nd and 3rd cents. of our era, and whose productions are clearly distinguishable from those of Southern studios. Similarly, the less important bas-reliefs brought to light in the Danube provinces are certainly independent of Roman influence; they may be directly connected with certain Asia Minor models. The distinguishing feature of the most important works of these artists from the banks of the Rhine and the Danube is that the central group of the bull-slaying Mithra with his two companions is surrounded by a series of accessory scenes which represent the whole cosmogony of the mysteries and the mission of Mithra, from his birth out of a rock to his assumption up to heaven (*ib.* i. 153 ff.). Then there are added astronomical images or cosmic emblems (planets, signs of the zodiac, winds, etc.).

If we subject all these scenes and symbols to an analysis in detail, we can show that the majority of them are modifications or adaptations of old Greek subjects. Thus, Ahura Mazda destroying the monsters which have arisen against him is a Hellenic Zeus hurling his thunderbolt at the giants (*ib.* i. 157). The poverty of the new conceptions which Mithraic iconography introduces is in startling contrast to the importance of the religious movement that inspired them. At the period when the Persian mysteries overspread the West, the art of sculpture was too decayed to be revived. Whereas, during the Hellenistic period, sculptors were able to conceive novel forms for the Egyptian divinities (Isis, Serapis, etc.), happily harmonizing with their characters, the majority of the Mazdean gods, in spite of their strongly-marked nature, were obliged to assume, whether appropriate or not, the form and dress of the Olympian deities to which they were assimilated.

Art, accustomed to live by plagiarism, had become incapable of original invention. But if, without analyzing each scene and personage in detail, we contemplate the total effect of the work, we receive an impression of something entirely novel. The attempt to represent in stone, not only all the deities of the Mithraic pantheon, but the history of the world and of Mithra as creator and saviour, was a truly sublime idea. Even before this time, especially on the sarcophagi, we find a method employed which consists in representing

the successive moments of an action by pictures superimposed on one another or drawn on parallel surfaces; but we cannot mention any pagan monument which can be compared in this respect with the great Mithraic bas-reliefs, especially those of Neuenheim, Heddernheim, and, above all, Osterburken (*ib.* 245, 246, 251). To find a similar attempt we have to come down to the long series of subjects with which Christian artists in mosaic adorned the walls of churches.

If we wished to criticize the details of these sculptures, it would be easy to censure in them the disproportion of certain figures, the clumsiness of some movements, the stiffness of some attitudes, and, above all, the confused impression arising from the superabundance of personages and groups. This last fault of overloaded composition is one which the Mithraic monuments share with the contemporaneous sarcophagi. But in criticizing these remains, it must not be forgotten that painting came to the aid of sculpture. The strong contrast of colours emphasized the principal outlines, and threw accessory parts into prominence. Often certain details were indicated only by the brush; and gilding also was used to set off some subsidiary parts. Without such a brilliant combination of colours the piece of statuary would have been almost invisible in the deep shadow of the subterranean crypts. Such a device, moreover, was one of the traditions of Oriental art, and Lucian (*Jup. trag.* 8) had already contrasted the simple and graceful forms of the Greek deities with the startling gorgeousness of those imported from Asia.

In spite of the numerous suggestions which it has borrowed from the treasury of types created by Greek sculpture, Mithraic art, like the mysteries of which it is the expression, remains essentially Asiatic. The idea with which it is mainly concerned is not to produce an æsthetic impression; it aims principally at arousing religious emotion, not through the perception of beauty, but rather by recalling to the mind sacred legends and teachings. Faithful in this point to the traditions of the ancient East, it confines itself to relating and instructing. The medley of personages and groups with which some bas-reliefs are thronged, the host of attributes with which the figure of Eternity (see above) is overloaded, show us that a new ideal was born with the new religion. These ungraceful or tasteless symbols, the lavish use of which is attested by the monuments, did not charm by their elegance or their dignity; they fascinated the mind by the disturbing attraction of the Unknown, and aroused in the neophyte a reverential fear in face of a tremendous mystery. They were, as St. Jerome says (*Epist.* 107 ad Lætam), 'portentosa simulacra.'

Here, above all, is to be found the explanation why this art, extremely refined as it was, in spite of all its imperfections, has exercised a permanent influence. It was linked to Christian art by a natural affinity, and the symbolism which it had helped to make popular in the West did not perish with it. Even the allegorical figures of the cosmic cycle, which the devotees of the Persian god had reproduced in such abundance (for they regarded the whole of nature as divine), were adopted by Christianity, although really opposed to its spirit. Such were the images of the earth, the sky, and the ocean; the sun, the moon, the planets, and the signs of the zodiac; the winds, the seasons, and the elements; which occur so frequently on the sarcophagi, the mosaics, and the miniatures. Even the mediocre compositions which the artists had conceived to represent the incidents of the Mithra-legend were able to inspire Christian artists. Thus the figure of the sun raising Mithra out of the ocean served to express the ascension of Elijah in the chariot of fire; and, down to the Middle Ages, the figure of the bull-slaying Mithra was perpetuated in the representations of Samson rending the lion.

F. CUMONT.

ART (Muhammadan). — **1. Introduction.** — Our researches into Muhammadan art are as yet entirely in their infancy. So far, the historical inscriptions are only being collected, and this undertaking, upon which M. van Berchem is still engaged, is a necessary condition of all historical study in this field. It is much to be desired that, by way of supplementing this, some one would group together the literary sources which bear upon graphic art in Islām. The bibliography at the end will show that, although we possess several comprehensive writings in this department, we have very few such treatises upon Muhammadan works of art as are serviceable for scientific investigation. The present position of our researches is conditioned by the fact that no Arabic scholar has made himself proficient in the department of graphic art, while the three or four historians of art who deal with Islām at all, have only the most meagre acquaintance with the language and culture of its adherents. In the circumstances it is not to be expected that the present article should do more than acquaint the reader with the outstanding facts of the subject in their relation to religion and ethics. The writer, indeed, feels more inclined to point out the *lacunæ* than able to fill them up. His purpose is not so much to supply adequate information upon the subject proposed, as to provide the reader with a general conspectus of Muslim art.

2. Pre-Muhammadan data.—The most important of these is the action which forms the inevitable adjunct of the Muslim's every prayer, viz., the turning towards Mecca. It does not fall to the historian of art to establish the origin of this custom of turning in a certain direction, or to decide whether it was not simply a transference of the practice of orientation by the sun, as was observed also by the Christians, to the new religious centre. So long as Muhammad had regard to Jews and Christians, it was towards Jerusalem that he turned; it was only at a later stage that he made Mecca the cynosure. We speak of Mecca therefore as pre-Muhammadan only in virtue of its having been a religious centre, and not because the Muslim turns his face towards it during prayer.

Mecca can hardly be said to have any further significance in regard to graphic art. As the Ka'ba lies in the centre of the temple-enclosure, and has not, like the mosque, a definite direction at one side, it naturally dropped aside as a pattern for the mosque. On the other hand, we may surmise that in this most important focus of pilgrimage in Arabia, some kind of monumental relic must have existed from the earliest times, even before Muhammad's day. We may imagine it to have been something analogous to the Qubbat aṣ-Ṣaḫra in Jerusalem, *i.e.* a centrally situated cupola-shaped building. At the present day the temple appears as a quadrangular open court, in the middle of which stands the 'Cube' with the Black Stone. Around this there has been laid out a circular area in the court, which may indicate the form of the earlier cupola-shaped structure. The Qubbat aṣ-Ṣaḫra is surrounded by a corresponding quadrangle.

3. Muhammad. — Had Muhammad not been forced to flee from his native city, it is probable that the mosque would have taken a form somewhat different from that which prevailed before the emergence of the *madrasa*, and apart from the influence of Christian architecture as applied to

churches. As Muhammad, however, established his place of prayer in Medīna, and was also buried there, this most unpretentious beginning gave the initiative to the architecture not only of places of worship, but also to some extent of tombs. Samhūdī, in his *History of the City of Medina* (ed. Wüstenfeld, in *Abhandl. d. Ges. d. Wissensch. zu Göttingen*, ix. [1860] 60), tells first of all how Muhammad obtained the site for his mosque, and proceeds as follows: 'Upon this the edifice of bricks was built, palms were used as columns, and a wooden roof was fixed above.' This mosque had three entrances—one at the back, which was built up when Muhammad began the practice of turning to Mecca instead of Jerusalem, the others being the Gate of Mercy and the prophet's private door. After the conquest of Khaibar the mosque was entirely re-built, being enlarged to twice its former size. Some idea of the interior is given by the position of the column beside which Muhammad prayed: 'It was the central column of the mosque, the third forward from the *minbar*, the third from Muhammad's tomb, the third from the south side, the third from the main road before (as Ibn Zabāla states) this was widened by the space of two pillars' (Wüstenfeld, 65). The columns fell into a state of decay during the Khalīfate of Abu Bakr, and he had them replaced by fresh palm trunks. The most notable restoration—or re-construction—was that made by Walīd I., who was supplied by the Emperor of Greece with Greek and Coptic artizans, as well as with mussel shells and money. Walls and columns were built with hewn stones of equal size, and cemented with gypsum; decorations of shell-work and marble were introduced, while the roof was constructed of palm and coated with gold-colour. When Walīd inspected the completed work in 93 A.H., he exclaimed, 'What a contrast between our style of building (*i.e.* in Damascus) and yours!' to which the reply was, 'We build in the style of the mosques, you in that of the churches.' Beyond this single reference we have nothing from which to form an idea of the mosque of Muhammad as a whole, or of its imitations. We shall presently return to this.

Of the sacred accessories belonging to the interior of a mosque, such as the niche for prayer (*miḥrāb*), the platform (*dikka*), etc., the only one which we can trace to Muhammad himself is the *minbar*, or pulpit (Becker, in *Orientalische Studien Nöldeke gewidm.* 331 f.). In ancient Arabia the *minbar* was the judge's chair, but as Muhammad advanced from the position of judge to that of ruler, this originally very simple piece of furniture with its two steps became more and more of a throne. A fresco on the inner front wall of Quṣair 'Amra represents one of the first Khalīfs, or perhaps Muhammad himself, seated on a throne. As this, in view of the command against images, may well give rise to fruitful discussion, we give a reproduction of it (fig. 1, p. 897). Over the enthroned figure is a baldachin with a Kufic inscription, which is unfortunately so much abraded that only the closing words are now legible: 'May God grant him his reward, and have compassion upon him!' The personage thus pictured—with red beard, and the saint's *nimbus* about his head—must accordingly have been dead, and cannot have been, as one might naturally think, the Khalīf then reigning. The figure beside the throne holds the lance—a recognized emblem in Islām to the present day; a woman with the *nimbus* is represented on the right, applauding. The design of the enthroned figure may be traced to the *Christus-Pantokrator*; in this case it will then be the Qur'ān, not the Gospels, upon which the left hand is placed. Beneath the great throne is seen the barge of the dead. At the time when this fresco was introdnced, *i.e.* subsequent to 100 A.H., the *minbar* can scarcely have had the same appearance as that shown in the illustration. As a matter of fact, the pattern furnished by Muhammad for the mosque and the *minbar* alike was framed with a view to mere utility, and the artistic elaboration thereof belongs entirely to a later period; for Muhammad had even less interest than Jesus in the graphic arts. His attitude towards figure-painting was one of avowed hostility; thus he once remained standing before the house of 'A'isha until a curtain ornamented with figures was removed, and he threatened those who made images with the direst penalties in the world to come. It was therefore impossible that art in Islām should develop the same didactic tendency as it did in early Christianity, in which the representation of figures was expressly utilized as a means of instructing those who could not read.

4. The Umayyads.—It was under these rulers that foreign culture began to stream in upon Islām. Even the mosque did not escape the general transformation, and its original design of simple convenience was left behind. The incentive to the desire for something more was first given by contact with Christianity. At the conquest of Damascus, the principal church of the city, that of St. John, was divided. Apparently it had then the same form as now: a dome in the middle, contiguous basilicas to east and west, and a pillared court to the north fronting the whole. At first the Muslims laid claim only to one of the basilicas; it was Walīd I. (A.D. 705–715) who first transformed the entire edifice into a mosque. Of this 'church-design' of mosque, except in Damascus, only two examples are now known, viz., the great mosque of Diarbekr, dating from the 12th cent., and that of Ephesus, from the 14th. Its nucleus was a Christian *martyrium* built over a pagan sanctuary, around which in time several churches were grouped, as was the case with the Holy Sepulchre in Jerusalem, the church at Nola, the church at the tomb of Menas, and the twin-churches at Ephesus.

The 'mosque-design' has no connexion with church architecture. It is certainly believed by some to be traceable to the plan of the forecourt attached to the Church of the Sepulchre in Jerusalem, of which the Muslims made a mosque for themselves; but in reality the *atrium*, or forecourt of the Christian church, still corresponds most nearly to the 'court-design' with the well in the centre. It is probably the case, however, that between the Christian *atrium* and the Muhammadan mosque there is an intermediate form—some primitive Asiatic type, such as a court with hall adjoining. The mosque exhibits this type in purer form than the church; the columnated halls, for instance, which enclose the court, grow more numerous in the direction of Mecca. Muhammad's mosque in Medīna was most probably of this form; as it stands to-day it is quite in accordance with this supposition, though, of course, it has been several times re-constructed.

The Umayyads, in building such mosques, had probably to avail themselves of columns taken from ancient or Christian ruins. Muhammad himself had used palm-trunks, and had thus left no established precedent. The oldest mosques, or at least those which survive in their rudimentary form, such as the ruins of Baalbek and Bosra, the 'Amr mosque in Old Cairo, and the great mosques of Kairwan and Cordova, are virtual column-museums, something like the façades of St. Mark's in Venice. Such embellishments have only a negative bearing upon the characteristic quality of Muslim art. As an example of an interior constructed of columns from ancient and Christian buildings, we give a view of the mosque at Kairwan (fig. 2, p. 898). Here we see a forest of columns in front; behind, to the right

of this, extends the entrance wall, beside which large chandeliers are suspended between the columns, the mid-passage running thence to the *qibla*. The arches run parallel to the line of this passage; in this instance they are rounded, though as a general rule they are pointed, and disproportionately high. The variously moulded capitals are linked together by anchors, while a wooden roof is placed over the whole. Such was the prevalent type of the Muslim place of worship in early times.

From the 1st cent. A.H. come other two buildings. One of these, situated in Jerusalem, has long been known; the other has been recently discovered by an Austrian research-party. The first, the Qubbat aṣ-Ṣaḫra upon the Temple hill, is not a mosque, but a memorial edifice. Above the rock with its caves rises a dome supported by four pillars, between every two of which stand three columns. Two circular passages with eight pillars, and two columns between each pair of these, lead over to the octagonal surrounding wall. Of the original fabric erected by 'Abd al-Malik in A.H. 72 (A.D. 691) very little remains: the columns still retain vestiges of the Cross upon the capitals, and must therefore have been taken from some Christian building, while the exceedingly valuable mosaics of the passage are of Persian origin.

On the other hand, the second monument referred to, a secular structure known as Quṣair 'Amra, and situated in the desert adjoining Moab, is pure Syrian in character. Attached to a small bath is a hall roofed with three parallel tunnel-vaults, and showing on the south two apsidal chambers, the niche between them having a straight front-wall directly opposite the entrance. The structure as a whole recalls the type of tunnel-vaulted churches indigenous to the interior of Asia Minor. The paintings are most instructive, as has already been shown in the case of the fresco of the enthroned figure illustrated in fig. 1 (p. 897). They exhibit Umayyad art in the full current of the Hellenistic style; the frescoes of the bath-chambers might well be counted as ancient. The pictures in the hall are of far-reaching significance, furnishing the best exemplification of the tendency which, while opposed to all worship of images, was again adopted by the image-breakers in Constantinople, and which, after the example of the Assyrian relief, became associated rather with the portrayal of landscape, and of hunting and fishing scenes, instances of these being found likewise in the early Christian art of Syria and its offshoots.

We must now call attention to the fact that in 'Amra, among scenes of hunting, fishing, and bathing, there have been introduced two pictures which, from the standpoint of religion and ethics, may well evoke much controversy in the future. Upon the front wall of the niche, opposite the entrance, appears the figure of the man seated on a throne. But it is the other picture which calls for explanation from the Muhammadan point of view; its subject is the princes overthrown by Islām, viz., the Emperor of Byzantium, Chosroës of Persia, the Negus of Abyssinia, and Roderick of Spain. How are these pictures to be brought into accordance with the interdict against graphic representation, and in what sense are we to interpret them? The picture of the Khalīf upon the throne undoubtedly gives the impression of its being a devotional piece, but that of the conquered princes can scarcely be explained in a similar way.

The Umayyads have also in recent times been spoken of as the builders of a number of large and beautiful castles in the desert, situated in the neighbourhood of 'Amra, but more towards the inhabited country. These have been made known chiefly by the large Meshītā façade which the Emperor of Germany received as a gift from the Sultan and placed in the Berlin Museum. In these castles the present writer discerns structures so unmistakably of a Persian character as to suggest conditions which would allow of a closer connexion with Hira or North Mesopotamia. Both Meshītā and Qaṣr-aṭ-Ṭūba are immense fortified royal seats, surrounded by groups of plots, and resembling those found in the Sasanian fabrics of Mesopotamia. Both are unfinished, and their respective porticoes bear the same kind of decorations, amongst which the Persian wing-palmette amid vine-tendrils characteristically recurs.

5. **The Abbāsids.**—The shifting of the centre of the Muslim world from Damascus to Baghdad had very important consequences for the development of graphic art, as the Syrian, *i.e.* the Hellenistic-Christian, factor now fell into the background, while the Oriental came to the front. In the latter, it is true, there is always a double strain: on the one hand the Assyro-Sasanian tradition, and on the other a drift in part still older, which may possibly have come in with the Parthians, and certainly found a channel in the immigration of sporadic parties, or even of whole tribes, of Turks from Central Asia to Persia and Baghdad. For the remote part of Western Asia this drift has all the significance of a barbarian invasion of a long established civilization, such as was experienced by Rome at the hands of the Germans. The Turks and the Germans were in fact the emissaries of an inchoate 'Hinterland' culture, which had been quite overshadowed by the hothouse growth of Egyptian, Babylonian, and Greek art, but which, when the representatives of the older refinement began to flag, came once more into the foreground. We must likewise bear in mind the gradually weakening influence of early Christian art, as also the growing potencies of the Chinese factor.

(*a*) *Persian elements.*—A wholly unique type of mosque is found in Mesopotamia. Here again, indeed, we have the arcaded court, with the open hall lying towards Mecca, but, in keeping with the nature of the country, the supports are formed not of columns but of brick pillars. In consequence of this, and because walls, pillars, and arches are now uniformly ornamented with stucco-work, the mosque assumes a most characteristic appearance, known to us until recently only from a mosque in Cairo erected in *c.* 870 A.D. by the Ṭūlūnids, who came from Baghdad to Egypt. It has lately been shown, however, that the mosque of Ibn Ṭūlūn was built upon the model of the mosque of Samarra, as had been stated by early Arabic writers. Moreover, in Abū-Dilif, 15 km. to the north of Samarra, there still stands a mosque which agrees with that of Ibn Ṭūlūn even in the number of its supports. Of this example of the unique character of Mesopotamian mosques we give an illustration from the survey of General de Beylié, which shows the entrance-wall opposite the *miḥrāb* (fig. 3, p. 898). Here we see pillars composed of brick, with hewn-out ornamental niches, and united by arches, the springers of which still remain. The side arches leave the view open towards the surrounding wall of the mosque, and through the central arch appears the spindle-like minaret.

Even this peculiar and fantastic minaret at Samarra has been copied in the mosque of Ibn Ṭūlūn at Cairo by the erection of a winding staircase on the outside. Elsewhere the stair is for the most part on the inside, and the minaret, which is used for calling to prayer, is outwardly smooth, whether rounded or quadrate. In the period of the Fāṭimids, buildings were constructed not only in the older style prevalent along the Mediterranean seaboard, *i.e.* with columns (*al-*

azhār), but also according to the Mesopotamian mode, *i.e.* with pillars (*al-hakam*). In both styles, however, the ornamentation was of the same kind. We shall return to this, but meanwhile we must speak of the accessories of worship.

There is first of all the *qibla*, or the direction towards Mecca, which is determined by a niche (*miḥrāb*) in the wall, very small in comparison with the great apse of Christian churches, and aligned with one or two columns. Of the origin of the *miḥrāb* we have no certain knowledge. It appears to have been originally made of wood. In Cairo three ancient wooden niches with beautiful ornamentation are still to be found. The typical form was already in use in the Khalīfate epoch of Baghdad; that period, at all events, exhibits the niche let into the wall, with bounding columns at the corners—a design which emerged in the East in Hellenistic times, and which had great vogue in the later period of ancient art, especially in Syria and Asia Minor. The graduated columnar porches of Western architecture likewise find their origin here.

The *minbar* has always been constructed of wood, essays in marble or other substance being of the rarest occurrence. By 132 A.H., when all the provincial mosques received their *minbars*, it can hardly have retained its primitive form, and was certainly of a different shape from that represented in the 'Amra fresco. Its model was not the throne, but rather the Christian *ambo*, an approximation to which had gradually been developed. Numerous steps led up to the platform, and parapet and steps were richly endowed with ornaments. The oldest surviving *minbar*, that of the great mosque at Kairwan, is of plane-tree, brought from Baghdad by Ibrāhīm ibn al-Aghlab in 242 A.H. (fig. 4, p. 899).

In order to convey a distinct impression of what the art of decoration as practised by the Abbāsids in Mesopotamia could achieve, we give an illustration of the façade of the al-Aqmar mosque in Cairo, as discovered in recent years and restored (fig. 5, p. 900). According to the inscriptions, it dates from A.D. 1125. Here we already see the arrangement which also prevailed among the Seljuks of Asia Minor—a central *risalit* which stands in front of the two wings, and derives its principal embellishment from a lofty gate. We do not as yet know the source of this design. It is all the more striking as we have before us only a false façade, which has no inner apartment corresponding to it, but which is simply a high wall standing before an open court. Of still greater interest is the ornamentation upon the wall-surface. This contains designs which in all probability were originally naturalized in the Orient as stucco-work, but which are here, in Egypt, transferred to the stone in common use. The portal-niche is connected with two smaller niches on a level with the ground-floor; all three display in their arches shell-like *tori* of luxuriant outline. Here too appears, fully developed, one of the main elements of Muslim decoration, viz. the *stalactite*. We find stalactites upon the side portals, taking the place of mussel-panelling, and also as a surface-decoration above the little niches beside the main porch, while they appear in their proper and original function on the corners of the building, where in two rows of niches one above the other they form a beak. The design of the niche with inserted columns is often applied to the upper wall; the little columns on the central *risalit* already show the bell-form which came with the Ṭūlūnids or the Fāṭimids from Persia to Egypt. Along the upper extremity of the façade, which is filled out with ornaments of rosettes and lozenges, runs an inscription-frieze.

The present writer regards these stalactites as a characteristic deposit of Muslim ethics in the field of graphic art. In them constructive restraint, *i.e.* the best and obligatory design, is surrendered in favour of a freakishness capable of endless variation, which becomes all the more interesting by reason of the limitations laid down by the spatial form. The stalactite, rightly regarded, is of purely constructional origin. It served originally, as a single niche, the same purpose for which the Byzantines used the so-called pendentive, *i.e.* the filling-out of the corner which remains open when a round cupola is placed upon a square substructure. For this, later Hellenistic architecture had a definite, mathematically accurate, solution in the sector of the vault of the circumscribed circle; in Persia, on the other hand, the custom was to place a niche in the angle. Instead of the single niche, however, we occasionally find three, combined as already noticed in the case of the al-Aqmar mosque, or, more frequently, in the inverse position, one below and two above. Next a further row, of three, came to be added, thus making a group of six; then a row of four, making ten, and so on. This embellishment of the cupola-wedge was transferred to portal-niches, then to surfaces, and in this way was obtained an ornamentation which always indicates a terminal line or a transition (cf. on this point the works of Bourgoin).

This delight in the spinning out of fortuitous conceits likewise brought to maturity the second style of ornament typical of Muslim art, viz., the *arabesque*. In this also the distinctive feature is that from a theme originally given—some natural object in the present case—certain elements are grouped by the imagination to imitate nature, and for this end new themes are introduced, with which, as with conventional numbers, endless combinations may be made. As the present writer has shown in the *Jahrb. d. preuss. Kunstsammlung*, XXV. (1904), p. 327 f., the arabesque takes its inception from the Hellenistic vine-branch. In the later period of ancient art this became the most popular pattern for striated or superficial decoration. The development towards the arabesque begins when the artist divests the vine-leaf of its natural form by superimposing other leaves, or a triad of globules, upon the diverging point of the ribs, or when, further, he makes the leaf tri-lobed instead of five-lobed. But the actual transformation consists in the application to the vine-leaf of the lobate form which may really be described as the artificial flower of West-Asiatic art, *i.e.* the palmette. The vine-tendril moulded after the palmette—this is arabesque. The development proceeds in virtue of the fact that the palmette can be split up either into halves or into single lobes; while each of these lobes again may be expanded, and give rise to new ramifications. The façade of A.D. 1125, in its details, furnishes illustrations of the initial stage of this whole development: here the branch shows more of the Persian than of the Arabian form. On the other hand, fig. 6 (p. 900), representing a wooden tablet in the K. Friedrich Museum in Berlin supposed to date from A.D. 1125, exhibits all the stages side by side—the five-lobed vine-leaf with and without the grape-cluster, the trifolium, all kinds of ramifying palmettes, and also the palmette itself with ornamental branching.

In this tablet the divided palmette in the centre is surrounded by a ten-angled star which obtrudes itself into the marginal bands both above and beneath. This brings us to the third class of specifically Muhammadan ornament, viz., *polygonal lace-work*. It is already to be seen on a closer scrutiny of the Cairo façade of A.D. 1125—appearing as striated decorations in the lozenges of the surface-niches, above to the left; but here they show rather the older double-stripe design which was common also in ancient and Christian art. The

distinctively Muslim variety, as we think, shows in its origin the influence of the Turkish-Mongolian nomadic races, who eventually brought the Khalīfate to an end (A.D. 1258).

Before dealing further with this subject we may draw attention to the influence exerted upon the development of Muslim art by religion and ethics—an influence revealing itself in the fact that the ornamentation of sacred buildings embraces no representation of living objects. The wonted Mesopotamian type of decoration consists in overlaying the walls, pillars, and arches with stucco ornaments. We are cognizant of no instance whatever in which this architectural decoration contains the figure of man, animal, or bird. The mosque of Ibn Ṭūlūn in Cairo; the Church of Abbot Moses of Nisibis in the Syrian monastery of the Nitrian desert, which was stuccoed by Mesopotamian artists; Maqām 'Alī itself, on the Euphrates; Samarra—in none of these have we a trace of a living creature figured as an ornament. In this period, therefore, the commandment against the use of figures in sacred buildings would seem to have been stringently enforced. The ornaments are composed of half or whole palmettes, which are connected with one another by spiral designs, and thrown out by indentations so as to form independent configurations. To these again are added designs which are traceable in the main to the stucco-technique in its capacity to suggest the dark effects of depth. Symbolical figures, such as were favoured by Sasanian and Christian art—the crescent, the star, the wing, etc.—are entirely absent so far as religious art is concerned. If we would adequately appreciate the authority thus attaching to the precepts of religion in the sphere of graphic art, we must keep before us the delight which the Orient has always found in the mystical and symbolical use of animal forms, as is in fact exemplified by the extreme frequency with which such figures are employed in the secular art of Islām itself.

(*b*) *Turkish elements.*—One of the most singular notions still current, and one to be explained only on the ground that our vision has been deranged by our immemorial habit of seeing everything in the light of Græco-Roman institutions, is that the migratory races, whether Germans or Turks, were destitute of all art. This is to forget that the Goths brought with them into Italy a highly-developed culture, acquired upon the Greek coast of the Black Sea; and the like holds good of the peoples who forced their way from Central Asia into Persia, and who had thus passed through, or temporarily settled in, the long-civilized region beyond the Caspian Sea. Think of the discoveries in Hungary, telling of the time when the Magyars took possession of the country. This equestrian people came from the territories lying between the Altai and the Ural without coming into contact with Transoxiana; nevertheless their taste in decoration was well developed. How much more are we entitled to look for æsthetic proficiency amongst the peoples who had not only lived at close quarters with the Samanids or the Ghaznavids, but who, as, *e.g.*, the Seljuks, had made themselves masters of their lands before they conquered Persia and Asia Minor. In Egypt the new conditions were ushered in under Saladin, and continued during the period of the Turkoman and Circassian Mamlūks, until, in 1517, the Turks proper gained the upper hand.

It is worthy of remark that with the advent of the Turkish tribes are conjoined two types of building of which there are no surviving examples from Umayyad or early Abbāsid times: the large cupola-domed *mausoleum* and a new type of mosque-school, the *madrasa*. As regards the mausoleum, there is no doubt that it had already been roofed—by Constantine or even before his day—with cupolas. But a gigantic fabric of brick, such as the tomb of the Sultan Sanjar in Merv, dating from 552 A.H. (A.D. 1157), is, of course, hardly to be compared with the finely articulated edifices of Christian times. We must never forget, however, that the tombs of the Umayyads were violated by the fanaticism of the Abbāsids, or that the only tomb known to exist in the neighbourhood of Baghdad, that of Zubaida, the favourite wife of Harūn al-Rashīd, bears a curious niche-pyramid, which hardly permits of comparison with the later buildings. It is true that pyramids are found also upon the mausoleums erected in A.D. 1162 and 1186 by Seljuk Atabeks in Nakshevan, on the Perso-Armenian frontier, but these are supported by a dome-shaped vault, the walls of which are embellished with polygonal ornaments of mosaic work in stucco bricks. One of the far-famed sights of Cairo is the Necropolis, the so-called Tombs of the Khalīfs and Mamlūks (fig. 7, p. 901), which in their picturesque construction invite comparison with the massive forms of the pyramids on the opposite bank of the Nile. The mausoleums of Islām are so arranged as to permit of being dwelt in by the family of the deceased at certain seasons of the year. An even more magnificent effect, however, than that of the Necropolis of Cairo is made by the sepulchral mound of Shah Zindah, near Samarcand. The huge mausoleum of Timur (†A.D. 1405), which the terror-inspiring Mongol leader had built in his lifetime, and which is now known as the Gur Emir, lends signal distinction to the whole district. As a work of art, however, it is surpassed by the sepulchral mosque of Khudābandakhān in Sultanīya (A.D. 1304–1316), which, like the mausoleum at Merv, presents on the outside an imposing arcade style of architecture. It can hardly be a mere matter of chance that these three most important sepulchral edifices should be found in the Caspian or Trans-Caspian area.

The second architectural form which first came into general use subsequently to the incursion of the Turkish tribes, viz. the *madrasa*, likewise evolved a capacity of being applied to great monumental structures. An example of this type may be seen in the illustration (fig. 8, p. 901) of the mosque of Sultan Ḥasan in Cairo, erected in A.D. 1356–1359. It was the Ayyūbids who instituted such college houses in Egypt. The *madrasa* expresses the idea that, in order to correspond with the four sects of Islām, four separate wings are required, viz. *Madrasat al-Ḥanīfīya, al-Shāfi'īya, al-Ḥanbalīya*, and *al-Mālikīya*. This plan of associating four schools in one building was carried out in a very ingenious way, namely, by planting them respectively in the four angles of a cross, which was formed by four tunnel-vaulted arms converging upon the open central court. Were the tunnels of this cross all of equal length, and were a cupola placed over the small court, we might fail to discriminate between this form of building, in its general plan at least, and the cruciform church with a dome. As, however, the central square is open to the sky, and the four aisles are often of very different lengths, such an identification is out of the question. We incline to believe that the plan of the *madrasa* is in its essentials of very remote origin. It is resorted to in the construction of a gateway for the citadel of 'Ammān in Moab, and was no doubt often used in Sasanian palaces. It is accordingly a Muslim construction only in so far as it has been transferred to the institution of the four sects, and elaborated in accordance with the requirements thereof (see ARCHITECTURE [Muh. in Syria and Egypt], p. 757).

This remarkable construction impresses the native of the West as being more decidedly Oriental than even the mosque. Picture these huge tunnels, vaulted mostly in the pointed style, and strengthened by the schools built into the corners like immense supports, and yet without anything to sustain; it is the spirit of the stalactite without architectonic motive, and of the vine-branch without the link with nature. Further, in Egypt at all events, there is something which must cause the utmost amazement, viz. the 'High Gate,' or portal-niche. The niche of the mosque of Sultan Ḥasan in Cairo, built in A.D. 1356–1359, *c.* 26 metres in height, has been cut out of a wall which rises 37·70 metres above the level of the street, and is not accommodated to the main feature of the edifice as a whole, *i.e.* it does not correspond with the *qibla*, but has a relation to the line of the street, being placed in a corner obliquely to the longitudinal wall, so that any one entering the vestibule can reach the central court only by way of various narrow passages. We might all the more expect to find an axial design in the main ornament, viz. that of the porch, as the immense dome of the builder of the mausoleum towers aloft exactly in the axis behind the *miḥrāb*. This ignoring of systematic design is peculiar to Egypt, and is not found, so far as the present writer knows, in other Muslim lands, while, especially in Asia Minor, the *madrasa* is always arranged symmetrically about the central axis.

Meanwhile we must say something regarding other innovations, which make their appearance subsequently to the ascendancy of the Central Asiatic element in the Muslim world. The astonishing growth in the popular use of polygonal ornamentation already touched upon may possibly be attributed to the preference (for geometrical decoration which is characteristic of nomads. Even upon the *minbar* of Kairwan, constructed probably in Baghdad in 242 A.H. (fig 4, p. 899), the double-striped lace-work in straight or curved lines so largely predominates that we can scarcely reconcile its vogue with our wonted conceptions of Sasanian and early Muslim art, in which it is rather the palmette that prevails. But, by the time when the Oriental element re-emerged from the obscurity in which it had been embedded for centuries, Hellenistic art must already have returned, more decisively than ever, to the style of the geometrical lace-work. This reversion to the primitive, then, finds ample scope for development among the nomads from Central Asia, whose taste was still in thrall to the lace-work, as to the material generally, and to caprice.

Since, in the art ancillary to the cultus, *lace-work* takes the place of animal ornament, it demands some notice at this point. As an illustrative example, we reproduce a detail of the *minbar* (A.D. 1168–1169) of the al-Aqṣā Mosque in Jerusalem (fig. 9, p. 902). Here we have a piece of work in wood and ivory, by an artizan from Aleppo, so complicated in its construction as to be hardly intelligible to Europeans. We perceive arabesques of ivory in the middle of both the vertical mouldings. On either side are polygonal decorations, composed of purfled mouldings in wood and fillings of ivory. From the corners which form the foci of the main lines we may be able to infer the class of polygon upon which any particular play of lines is designed — whether it is the hexagon, the one mainly resorted to, or some other fundamental figure. The discovery of this, however, merely gives us the key; the endlessly varied ways in which the purfled fillets intertwine and intersect, leaving, in ordered repetition, free spaces, which in turn are filled np with relief arabesques or coloured inlaid work, can scarcely be resolved. All this is an expression of the same exultation in elaborating designs obtained mathematically or fortuitously as was to be seen in the case of the stalactite. The fly-leaves of the Qur'ān exhibit first-rate examples of such artifices. There, indeed, they are in their right place, as in them and in the caligraphic amplification of the writing a compensation had to be found for the absence of the human form.

(*c*) *Chinese elements.*—We are not accnstomed to regard China as the source of a contribution to Muslim art. Chinese elements, nevertheless, may already have found admission in Syria, as they certainly did, more powerfully, in Persia, and finally, in all probability, through the influence of the on-coming Turks. From early notices of silk as a Chinese product, and of silk materials in Egypt and in mediæval Europe, it is easy to show that in the later ancient and the Christian period there was commercial intercourse between Syria and China. In Persia during the Abbāsid dynasty the influence of China begins to be felt even in architecture, and unmistakable evidences of this influence are seen in the Talisman Gate of Baghdad, completed in 618 A.H., as well as in two reliefs of winged figures dating from about the same time. These works become intelligible only in the light of facts which were afterwards made plain by the Oriental carpet. Thus both the examples just cited as bearing upon the field of architecture find their immediate explanation in the enormous carpet now in the possession of the Emperor of Austria and known as the 'Vienna Hunting Carpet.' The illustration of this (fig. 10, p. 902) shows, in the borders, winged genii, and, in the angles of the inner field, the Chinese dragon struggling with the phœnix. The manner in which the plant-designs and the Chinese cloud-design are wrought out leave us in no dubiety regarding their origin. Yet the carpet was manufactured in Persia, as is evinced, to say nothing of the workmanship, by the hunting scenes in the inner field, where Persians with turbans and heron-feathers are shown on horseback engaged in the chase. Chinese traits are visible also in the drawing of the figures.

This brings ns to the most interesting fact of all in the development of Perso-Muslim art, viz. the resuscitation of figure-representation as a result of Chinese influence. Reference has already been made to the illumination of Qur'ān manuscripts, from which figures are entirely absent. This does not entitle us, of course, to assume their absence from other classes of literature. There exist, however, a few miniature manuscripts which are decorated in the style usual in Armenian and Coptic writings. But the great majority of Persian illuminated manuscripts, and precisely those which are most valuable in an artistic sense, display alike in landscape and in figure the identical type of representation which, judging from the earliest Japanese and Chinese works of art of the class that imitates nature, we recognize as belonging specifically to the Far East. Moreover, as recent researches make it credible that the cavalier and love poetry of the earlier mediæval period in Europe caught fresh stimulus from the Perso-Muslim world with which it came into touch on Spanish ground, it cannot but amaze us to encounter, in Persian manuscripts, illustrated with designs developed in China, the very spirit known to us directly in our own literary history. In one province of Muslim art, therefore, viz. the secular, a sphere is found for a creative impulse which works freely in the expression of all human feeling, thus forming a vivid contrast to the sacred art which was fettered to the interdict against 'graven images.'

The case is somewhat different in regard to the portrayal of animals and animal fights, hunting

and drinking scenes, planets, Alexander upon the dragon-chariot, and the like, as seen upon the so-called Mossul-bronzes, from the middle of the 12th cent. and onwards. It is possible that the technique seen in those vessels derived its inspiration from Ceutral Asia, while Chinese designs likewise occur sporadically; but in the main the impulse towards the representation of figures must be traced to Persian Christians. On this hypothesis alone can we explain the adoption of the late Hellenistic picture-cycle, and, in particular, the introduction of scenes from the life of Christ, which were designed for the apartments of Muslim princes. Consequently, the figures portrayed must be interpreted, not in the ethical spirit of Hellenic-Christian symbolism, but as purely decorative. The primitive Oriental interpretation of the animal fight, as symbolical of the conflict between good and evil, is simply lost.

6. Later developments.—The great mass of the Muslim memorials of art emanates from the period after the Turkish tribes gained the absolute lordship of the civilized regions originally permeated by the Syro-Persian spirit. Art was now devoted more than ever to purposes of representation and embellishment. It is therefore very remarkable that what have come down to us from this relatively late epoch are mainly mosques and mausoleums, not palaces, the Alhambra being the only one of its class. It would appear that at this time places of worship alone were built 'for eternity,' *i.e.* of durable material. In the Seljuk kingdom of Iconium (Konia) in Asia Minor this material was principally stone. The mosques and *madrasas* of Konia and Sivas have magnificent façades of the same, or of an incomparably richer, style than the façade of the al-Aqmar mosque given in fig. 5 (p. 900). The *madrasa* approximates more to the type of the arcaded court. In Persia the predominant building material was brick. The result was that every variety of the art of facing was resorted to, the walls being veneered with stucco or many-coloured bricks, or covered with faience mosaics. The native soil of such things was not Mesopotamia or Iran alone, but, as in the case of so many other features of Muslim art, Transoxiana. There, in Samarcand and Bokhara, the most marvellous erections of the Mongols are found standing to this day.

An altogether peculiar position in Muslim art was taken by the Osmanlis, from the time that they obtained possession of Constantinople. It was the Church of St. Sophia that roused them to rivalry, so that in Stamboul we meet for the second time with mosques of Christian design, as Damascus furnished us with the earliest examples. The Osmanlis, in fact, bring to completion what had been aspired to by the great architects of Asia Minor in the inception of antique art at Constantinople, viz. the construction of edifices on a scale of amplitude hitherto unknown. We feel unable to decide whether it was intensity of religious emotion that gave the incentive to the stupendous domes in Stamboul, rising above enclosures that yield a total impression of such magnificence as is unparalleled in the Renaissance and Barocco structures of the West. We may assert without misgiving that the mosques associated with the Church of St. Sophia exhibit that ideal form which, since Bramante's time, has been sought in the all-round effect of stately interiors. Thus Islām at length achieved what lay originally far beyond its range: it gave the crowning touch to the development of the art of architecture which had evolved its designs from a Hellenistic foundation.

A second triumph was won for Islām by the too little known memorials of art in India. Here again Muslim art accommodated itself to the indigenous forms—a process rendered all the more easy as the ground-plan and elevation of the mosque, and even the fantastic play of ornamentation, had already been fully evolved in pre-Muhammadan India, though, naturally, in a style different from that of Western Asia. The magnificence of the plan of arrangement in the Indian mosque constructions is almost without parallel. It is also in India that we find palaces of vast configuration dating from Muhammadan times, and thus furnishing the necessary supplement to the secular art so slenderly represented in the Mediterranean region.

The Alhambra.—To Europeans the Alhambra represents the sum and substance of Muslim art, and, in point of fact, it is really such, so far as the province of secular art is concerned. There is one thing, however, which we must not forget—a fact of decisive import for the ethical value of the whole structure, viz. that the Alhambra must be regarded, not as an independent work of architecture, but as a component part of the natural environment, which is always taken into account in the secular art of Islām, and which, in the case before us, is a park encircling the whole rising ground about the main hill. We may gain an idea of the wide expanse sometimes given to such enclosures from the Conca d'oro beside Palermo, where the palace-grounds embrace the chateaux of Zisa, Cuba, Favara, and Monreale; note, however, that a different style was adopted by the Normans in the construction of their dwelling-place, that, namely, of the fortified stronghold. But in the citadel of Granada we meet with open courts, enclosed by lath-and-plaster work, which has been preserved as if by a miracle. The first court, called the Court of the Myrtles, still retains its garden-like character; while in the second, the Court of the Lions (fig. 11, p. 903), the fountain in the centre sends out babbling streams which flow into the halls.

Then the glittering wealth of ornaments, with their lustrous colours and their puzzling variety of form! The principal designs, the stalactite, the arabesque, and the polygon, make their appearance here once more, though employed with a more uniform ornateness than in the earlier style of art. The kind of workmanship, however, to which all this exuberance of beauty has been applied, explains why it is the Alhambra alone that has survived: the arches which are finished in such a splendid style of architecture have nothing at all to sustain; they consist simply of wood and plaster, like an ornamental sign-board. The structures which lie behind this embellishment are of a very simple kind, and characteristic of the race which produced them.

The inscriptions of the Alhambra reveal a surprisingly intimate relation between spectator and ornament. Just as the Turks had the faculty of giving individuality to each one of a long series of fountains, so the Moors must have had a fine sense of the language of ornamentation. The inscriptions pertaining to the various portions of the great fabric, as well as to the various ornaments, furnish suggestive introductions to these. Thus, for example, upon a niche at the entrance to the Hall of the Ambassadors appear the words which Schack has translated thus:

'Mich hat des Künstlers Hand gestickt, wie ein Gewand von Seide,
Und mir das Diadem besetzt mit blitzendem Geschmeide;
So wie der Thron der jungen Braut strahl ich in hellem Schimmer,
Doch bringe höh'res Glück als er, es weicht und wechselt nimmer.'

Such facts of observation prompt the inquiry whether the ethical significance of Muhammadan decorative art is not of a higher order than we commonly suppose. It is our hope that the scientific research which is only now being vigorously applied to the field of Muslim art in general,

may in course of time yield fuller information on the subject than we have been able to give here.

LITERATURE.—i. *COMPREHENSIVE WORKS*: *Manuel d'art musulman*, (i.) H. Saladin, *L'Architecture*; (ii.) G. Migeon, *Les Arts plastiques et industriels*, Paris (1907).

ii. *ARCHITECTURE*: Franz Pascha, *Die Baukunst des Islam* (Darmetadt, 1896); Saladin, *La mosquée de Sidi Okba à Kairouan* (Paris, 1899); Herz Bey, *La mosquée du Sultan Hassan* (Cairo, 1899); Sarre, *Persische Baukunst* (appearing); the Russian work upon Gur Emir in Samarcand; A. F. Calvert, *The Alhambra* (London, 1907); and the recognized older literature.

iii. *DECORATION AND ORNAMENT*: Strzygowski, 'Mschatta' in *Jahrb. d. preuss. Kunstsammlung* (1904): the various works of H. Wallis, Martin, Schmoranz, and others, which are found well arranged in Migeon's *Manuel*. Inostranzeff and Smirnov have published a collection of materials for a bibliography of Muslim archæology, St. Petersburg (1906).

J. STRZYGOWSKI.

ART (Persian).—Persian art has developed more on the utilitarian side in connexion with the manufacture of rugs, draperies, embroideries, pottery, brass-work, and decorative tiles, than along the more purely æsthetic lines of sculpture and painting. Sculpture, in fact, had no chance to develop further in Persia after the Muhammadan conquest, for the teachings of the Prophet, even as modified by the Shī'ite views, to which the Iranians adhere, are adverse to representing objects that have animate life, and the Qur'ān expressly forbids the making of graven images (cf., however, preceding art, esp. p. 875 f.). In respect to sculpture, therefore, the Arab invasion marks a sharp line of division between the old régime and the new; but in other respects the history of Persian art may be traced with a fair degree of continuity for nearly twenty-five centuries.

The chief eras in the national history of the country, which it is found convenient to follow in a study of its art, have already been characterized in the article ARCHITECTURE (Persian) as: Early Iranian and Median period (before B.C. 550), Achæmenian (B.C. 550–330), Seljuk and Parthian (B.C. 330–A.D. 224), Sasanian (A.D. 224–661), and Muhammadan (A.D. 661 to the present day). As sculpture practically died out with the Muslim conquest, it may be appropriate to treat its history first, and then take up metal-work, the fictile or ceramic arts, art in textile fabrics, decorative designs, and pictorial representation.

1. **Sculpture and carving.**—(*a*) We know nothing definite in regard to sculpture or the state of the plastic art during the *Early Iranian period*, that is to say, prior to the 7th cent. B.C. Even if we consider that the Avesta in a manner represents that era of antiquity, we nevertheless can find in it no specific allusions to sculpture, unless we are to accept the theory, which has been advanced by some scholars, that images of the divine beings Vohu Manah (the Zoroastrian archangel of Good Thought) and Ardvī Sūrā Anāhitā, or Anaïtis (goddess of the heavenly waters), may possibly be referred to in *Vendīdād*, xix. 20–25, descriptive of cleansing, and *Yasht*, v. 126–129, describing the appearance of the divinity. Such an interpretation of the text, however (especially in the former of the two passages), is more than doubtful, even if we concede that images of these divinities were known in Strabo's time (*Geog.* xv. 114). It is indeed possible that some of the bronze figurines and small terra-cotta images that are now and then found in primitive burial-places, or unearthed in such excavations as those by Dieulafoy and de Morgan at Susa (J. de Morgan, *Mémoires—Recherches archéologiques*, i., viii., Paris, 1900, 1905), may go back to a remote Iranian age, but no truly archaic sculpture of any size has yet been found.

(*b*) A similar uncertainty prevails with regard to kindred objects attributed to the *Median age*, and also with regard to the huge stone lion at Hamadan. This statue is executed in the round, like the bull at Babylon and the tauro-cephalic capitals at Babylon (Dieulafoy, *L'Art antique de la Perse*, Paris, 1884–85, vol. iii. p. 13). Its age is a matter of debate. A thousand years ago Mas'ūdī (d. 951 A.D.) ascribed its origin to Alexander the Great, while Yāqūt (*c.* 1220 A.D.) placed it much earlier; and a number of modern scholars are inclined to assign the statue to the Median period (Jackson, *Persia Past and Present*, New York, 1906, pp. 151–162).

(*c*) The oldest identified sculpture of the *Achæmenian period* is the bas-relief figure of Cyrus the Great at Murghab, the ancient Pasargadæ. This image (which Weissbach claims to be a representation of Cyrus the Younger) must certainly have been prior to B.C. 525, when Darius succeeded Cambyses, the son of Cyrus, and transferred the royal capital to Persepolis. The figure is carved in low relief upon a large monolith slab, and is conspicuous both by reason of the curious crown, with Egyptian affinities, that surmounts the monarch's head, and because of the four magnificent wings that rise and droop from the king's shoulders —a feature borrowed from Assyro-Babylonian art. The image of Darius sculptured above his own inscription at Bisitun, or Behistan, may be dated some time before B.C. 500, and the panel on which it is carved likewise represents figures of the king's two chief retainers, together with portraits of Gomates, or the pseudo-Smerdis, and the other eight pretenders to the throne. Above the head of Darius floats an image of the god Auramazda (Ormazd) presenting him with the circle of sovereignty, or the guardian spirit of the king, as the modern Parsis prefer to interpret the image. The god is represented as a bearded figure, wearing a cylindrical head-dress, with horns, surmounted by the disc of the sun, and as swinging in a huge circle from which proceed rays of light (King and Thompson, *The Sculptures and Inscriptions of Behistūn*, London, 1907, pp. xxii–xxiii). The whole device shows the influence of Babylonia and Assyria. Of similar character are the carvings around the tomb of Darius at Naksh-i-Rustam, and upon the palace walls at Persepolis and Susa. In several of these the king is represented in the attitude of adoring Auramazda, or with his throne supported by subject nations; but the most spirited of the bas-reliefs are those which portray Darius in combat with real or mythical monsters—a *motif* borrowed, in like manner, from Assyro-Babylonian art. The same is true of the statues of Xerxes, Artaxerxes I., II., III., and Darius II., III. (so far as we can identify them); but the finest of all the specimens of the sculptor's art under the Achæmenians is the frieze of the stylobate of Xerxes' audience-hall at Persepolis, representing the vassal nations bearing tribute to the Great King. Of imposing grandeur, likewise, are the gigantic winged bulls with human faces, in Assyrian style, guarding the Portal of Xerxes through which his audience-hall was approached (see art. ARCHITECTURE [Persian]). The influence that was exercised in general upon Persian art by Assyria and Babylonia during the Achæmenian period may be seen at a glance by looking over the illustrations in the standard works on Persepolis and Susa mentioned at the end of this article.

(*d*) In the *interregnum*, or Seljuk period, that followed after Alexander's invasion (B.C. 330–250) and during the *Parthian period*, little progress was made in sculpture, save that the Greek impress supplanted the Assyro-Babylonian influence, as is evident from the Græcizing tendency seen in the bas-relief heads on the pilasters of the palace-temple at Hatra, and in certain characteristics of the carved bases of the columns at Kangavar, if that temple be ascribed to the Parthian age—a

matter that is doubtful. The principal piece of Parthian sculpture, however, belongs to the middle of the period, and is that chiselled on the panel of king Gotarzes (A.D. 46–51) at the base of the Behistan Rock. Its mutilated condition, due to the fact that at some time in the first half of the 19th cent. a tablet was incised into its very middle, renders it difficult to judge of the workmanship, but the style and execution appear to show distinct traces of Roman art.

(*e*) *Under the Sasanian dynasty* (A.D. 224–661), Persian sculpture received further inspiration from Roman art through the hands of Byzantine craftsmen, and gave no mean promise of higher development; but this was abruptly cut short by the iconoclastic Arabs when they swept over the land with their Muslim hosts. In style, Sasanian art is bold, though rather heavy, like that of its predecessors, and is marked by a superabundance of decorative *motifs*, especially in the form of crimped streamers floating from the shoulders of some of the figures, or hanging from chaplets held in the hand. The examples of Sasanian sculpture are comparatively numerous, and may best be seen in the series of seven massive bas-reliefs carved below the Achæmenian tombs at Naksh-i-Rustam, or again at Naksh-i-Rajab near Persepolis, at Shapur in the south of Persia, at Susa in the south-west, Ṭāq-i-Bustan in the west, and near the plain of Salmas in the north-west. The finest among them are the carvings in the grottos at Ṭāq-i-Bustan, near Kermanshah. They represent scenes from the life of Khusru Parviz, or Chosroës II. (A.D. 590–628), and are ascribed by popular tradition to the chisel of Farhād, the royal sculptor, whose love for Shīrīn, the king's beautiful favourite, brought ruin upon the gifted artist. At Ṭāq-i-Bustan and in two of the Persepolitan Sasanian sculptures, it is thought that the figure of the god Ormazd, or possibly of the female divinity Anaïtis, is represented.

(*f*) From the middle of the 7th cent., when the Sasanian power fell before Islām, Persia produced no more sculpture, although there was an attempt at a revival of it in the beginning of the 19th cent., when Fath Ali Shah (1798–1835) caused himself to be immortalized in stone at Rai (near Teherān) and elsewhere. His sculptures show certain survivals of the style of Sasanian times, but are combined with thoroughly modern traits. One of the two panels at Rai portrays the king in the act of spearing a lion, and is spirited in execution. Unfortunately, it was carved over the space occupied by an old Sasanian sculpture, which was destroyed to make room for it.

2. **Seals, gems, and coins.**—Closely connected with the glyptic art in its larger application is the more minute skill shown in the cutting of seals and gems or the sinking of dies for coins. The use of seals and cylinders from the earliest times is well known, and is sufficiently illustrated by the archaic finds made at Susa by de Morgan (*op. cit.* viii. 1–27); but if we are insufficiently supplied with evidence for the Early Iranian and Median eras, there are enough Achæmenian seals and carved gems to show the height to which artistic execution in small carvings was carried in ancient days. The art has never been lost, for we can trace its development all the way through the Parthian and Sasanian ages, and no Persian to-day is without his signature handsomely engraved on a seal for ordinary use. A similar form of skill was needed in the cutting of dies for coins, as illustrated in the Achæmenian period by the *darics* from the mint of Darius. The coins that were current under the Parthian rulers indicate to what an extent Greek influence affected Iranian art, and from that time onward the various changes may be traced by the issues from the mint of each successive ruler down to the present day, when the nickel *shāhī* (worth less than a halfpenny), inscribed on one side with the Lion and the Sun, as the national emblem of Persia, and on the other with a device in Perso-Arabic script giving its denomination, is as modern in appearance as if it had been made in a European mint.

3. **Metal-work.**—Owing to the mineral resources of the kingdom, the art of the metal-worker may be regarded as one of the oldest in Persia (cf. Geiger, *Ostiranische Kultur im Altertum*, Erlangen, 1882, pp. 146–148, 388–390). Specimens have been preserved in sufficient number to show the development of this phase of art from Achæmenian times, illustrated, for example, by the discoveries at Susa and the finds on the Oxus, down to the present day, when the brass-beaters of Iṣfahān and the coppersmiths of Kashan turn out some of the finest examples of artistic workmanship in the form of lamps, trays, dishes, bowls, pitchers, or damascened armour, that can be found anywhere. The various pieces of Achæmenian jewellery to be seen in the museums of Europe—the nail-studded Parthian helmet in the British Museum, two beautiful cups of the Sasanian king Chosroës II. in the Cabinet des Médailles in Paris, one of them embossed in silver, the other enamelled with gold—together with many beautiful examples of Iranian metal-work of various ages to be found in the Hermitage at St. Petersburg, may be cited as typical of the range and scope which Persia had in this branch of artistic production.

4. **Fictile arts, porcelain, earthenware, and ceramics.**—The artistic sense which Persia developed from the earliest times in fashioning and decorating earthenware objects, and in the making of beautiful tiles for practical and ornamental purposes, is worthy of high praise. In fact, it would be impossible to cite any rival for the wonderful frieze of archers, and the lion-frieze discovered by Dieulafoy at Susa, which show the height to which art in the making and colouring of tiles had been developed even in earlier Achæmenian times. If kindred specimens of Parthian and Sasanian tiles be missing, it is only because they have not been preserved; for the art was not lost, as is proved by the beautiful turquoise tiles on the domes of the mosques from the beginning of the Muhammadan era down to the present time. On the other hand, the remarkable skill which the Persians possessed in imparting to their tiles and plaques a metallic glint or lustrous sheen, known as the *reflet métallique*, has unfortunately been lost, since it died out some time during the 18th cent., and attempts to restore it have thus far met with the poorest success. For that reason good old tiles and plaques that display the metallic lustre are rare, even though broken fragments are still being dug up in the ruins of Rai, the city which seems most of all to have developed this peculiar product.

With reference to the early development of the ceramic art in pottery and earthenware, it may be said that some of the crude jars and bowls exhumed from the ash-hills at Urumiah (see Jackson, *Persia*, pp. 90–98), like those found by Henri de Morgan in archaic burying-grounds in Gilan and Talish (see J. de Morgan, *Mém.* viii. 251–342), may date from the Early Iranian or Median period, or even earlier. The potter's art, moreover, is mentioned in the Avesta (*Vend.* ii. 32, viii. 84), and fragments of jugs and earthenware vases, with coloured traceries as a decorative design, have been found in abundance as specimens of fictile art in the Achæmenian period. The same is true of the Parthian remains discovered at Warka; and noteworthy among these are the Parthian so-called 'slipper-coffins,' made

of a beautiful green glazed ware, and decorated with a somewhat stiff small human figure, repeated a number of times. The Sasanian fondness for elaborate decoration, as evidenced in the intricate designs and flower patterns on capitals of columns and in the ornamentations at Ṭāq-i-Bustan, was shown also in their ceramic work; for it is still possible to pick up among ruins like those of the Sasanian fire-temple, or *ātash-Kadah*, near Iṣfahān, pieces of jars and bricks with decorative markings that show an artistic sense; and the potter's art, well known to all through Omar Khayyam, is actively practised to-day.

During the earlier centuries after the Muhammadan occupation, Persia's art in faience (for, strictly speaking, there is no true Persian porcelain) is believed to have received considerable impetus through importations brought from China and through Chinese artizans settling in Iran. But, whatever may have been the extent of that influence — and the influence was not without reciprocity — Persian faience never lost its marked national characteristics in shape, colour, and design. In regard to glass, we know that the glass-worker's trade is referred to in the Avesta (*Vend.* viii. 85, *yāmō-pacika*), and specimens of glass, dating back to a comparatively early period, are extant. Glass vials, thought by some to have been lachrymatories, were found among the Parthian ruins at Warka, and the glass portions of the gold-enamelled cup of Chosroës II. show that the artistic uses of glass were well known under the Sasanians; while the employment of tiny facets of mirror glass in the interior decorations of sumptuous houses has long been a favourite means of ornamentation in Persia. Glass bottles, vases, jars, and urns, generally of a bluish colour, are found in almost every age down to the present, although the glass that is used in Persia to-day is almost wholly imported from Europe.

5. Textile fabrics: rugs, draperies, and embroideries. — The art by which Persia is best known in modern times is the manufacture of beautiful textile fabrics—rugs, carpets, draperies, and embroideries. We may presume that the art of rug-making was fully developed in Achæmenian times, since Themistocles, according to Plutarch (*Themist.* xxix. 3), when first presented before Xerxes or Artaxerxes, illustrated his meaning by a simile drawn from the intricate patterns of a Persian carpet; and there is little reason to doubt that rugs were used both on the floors and for ornamental hangings in the royal palaces at Persepolis and Susa. The employment, moreover, of archaic designs, handed down by tradition in the rug-maker's conservative art (for example, conventionalized forms of the tree of life), points back to the greatest antiquity. The carpet industry is to-day widely spread throughout Persia, and among the places that are thought to produce the best rugs, both in quality and style, are the districts of Kurdistan, Khorasan, and Kerman. Aniline dyes from Europe and Occidental patterns and designs are unfortunately finding their way in to corrupt the purity of this Oriental art, but a strong endeavour is being made to preserve its native integrity and ancient prestige—a prestige recognized in all the numerous works published in the West on the subject of Oriental rugs. Among Persia's textile arts is the weaving by hand of soft white and brown felts (Mod. Pers. *namad*) for mats, cloaks, and saddle-cloths. The art is as old as the time of the Avesta (cf. Av. *nemata-*, *Vend.* viii. 1, ix. 46), and it is still carried on in many parts of the country, more especially at Hamadan, Iṣfahān, and Yazd. Mention should also be made of richly embroidered Persian shawls, delicate fabrics with elaborate designs in needlework, heavily embossed brocades, ornamental draperies and hangings, and silks of various colours and fineness of texture. Among the oldest specimens of such fabrics are the examples of Sasanian textile work in the Archepiscopal Museum in Cologne, Germany, and in the temple of Horiugi, near Kioto, Japan (cf. Münsterberg, *Japanische Kunstgeschichte*, Brunswick, 1907, p. 118, pl. 14). The introduction and development of the textile arts as well as other arts of Persia were ascribed by Firdausi (A.D. 1000) to the legendary king Jamshīd, who lived in the golden age of Iran (see Firdausi, ed. Vullers and Landauer, Leyden, 1877, i. 23, 24 [tr. Mohl, Paris, 1876, i. 34–36; tr. Warner, London, 1906, i. 32–33]).

6. Painting, decorating, designing, and the art of penmanship. — Although painting cannot be called one of Persia's special arts, the wonderful effects in colour and decorative design that were obtained by the Achæmenian artists, as shown by the tile-work discovered in ancient Susa, prove conclusively how highly developed in early times were their æsthetic sense and their productive skill. Allusion has already been made several times to the artistic manner in which they still know how to employ colour and ornamental patterns even in connexion with objects of ordinary everyday use. How far the painter's art had advanced in Sasanian times among the Manichæans (for Mani was a painter as well as the founder of a great religious sect) has recently been illustrated by the remarkable finds made in Turkestan by the expedition sent out from Berlin by the German Emperor William II. As a rule, the Persians do their best work when painting portraits and flowers, while their landscape work and perspective composition are but mediocre. Their best pictures, in fact, are those on a small scale, like the miniature portraits on papier mâché writing-cases and lacquered boxes, or on the enamelled porcelain tops of tobacco pipes; or, again, in decorative designs of roses on book-covers, for the making of which they are especially noted.

One art, however, is carried to perfection in Persia; it is caligraphy, or the art of beautiful handwriting. Originally this accomplishment as an art may owe much to Muhammadanism, but nowhere else are to be found such beautiful specimens of chirography, whether minute or large, as in Persia; and no other people are so skilled in using their alphabet for decorative purposes, as may be seen from the graceful arabesques twined about the domes and minarets of the mosques, or interlaced into monograms of wonderful intricacy. To write a good hand is an essential part of culture among the Persians, and a number of well-known authors were masters of caligraphy. Not only so, but skilled scribes have devoted infinite time to copying in luxurious style the compositions of famous Persian poets, and their manuscripts are in themselves works of art.

7. Influence of Persian art. — The influence of Assyria and Babylon, of Greece and the Roman Empire, upon Persian art and architecture during the early and mediæval periods has already been referred to more than once. The fact has also been pointed out that Persia made these borrowings and importations thoroughly her own. In mediæval and later times Persia was influenced by (and influenced) China in ceramic art, and in the non-Muhammadan representation of living beings in paintings and the like (cf. above, p. 879). If the Arabs conquered Persia, they received more in art from her than they gave, and it is probable that the arts which the Moors developed in Spain and elsewhere were largely derived from the Persians. The Mongol invaders had little if anything artistic to offer Persia, but

she imparted to them in Central Asia much from her artistic taste, in the same manner as her art penetrated deep into Northern India. In the Europe of Chaucer's time Persian blue in textile fabrics was sufficiently well known to be referred to as 'pers,' and the West to-day acknowledges Persia's supremacy in the weaving of artistic rugs and carpets. In minor matters Persian art still exercises an influence on the Occident, but not without receiving some influence in return, and this gradual infusion of Western elements will doubtless tend to grow greater as time goes on.

LITERATURE.—See the bibliographical list given under ARCHITECTURE (Persian), and refer especially to Perrot-Chipiez, *Hist. de l'art dans l'antiquité*, tome v. 'Perse,' Paris, 1890; Gayet, *L'Art persan*, Paris, 1895; Murdoch Smith, *Persian Art* (Kensington Museum Handbook), Lond., 1880; Saladin, *Manuel d'art musulman*, Paris, 1907; Benjamin, *Persia and the Persians* (chap. xi. 'A Glance at the Arts of Persia'), London, 1887; Dalton, *The Treasure of the Oxus, with Antiquities of Ancient Persia and India*, London, 1905. A. V. WILLIAMS JACKSON.

ART (Phœnician).—To express the deity with the emblems of his majesty, as conceived by the worshippers, is the highest aim of religious art, and it was apparently this that animated the Babylonians, Assyrians, Egyptians, Greeks, and Romans, all of whom have produced specimens of their skill worthy of the highest admiration. The Phœnicians, on the other hand, worshipping Baalim and Baalat, did not possess any deities sufficiently distinctive in their nature to lend themselves to representation in sculpture and painting. El, Adon, and Melek were in the same case with Baal and Baalat—terms of much too general a nature. The Babylonian Tammuz, a sun-god, who became with the Greeks a simple hunter in Syria, and Ashtoreth, the Ištar of the Babylonians, spouse of Tammuz, and goddess of the moon and of the planet Venus, form exceptions, and had their influence, though they were not the chief divinities of the Phœnicians. When, therefore, they wished to represent the divinity, the emblem which they chose was in the form of a cone, of which numerous examples exist, not only in Phœnicia, but also in the countries which fell under its influence. The two Phœnicians of Malta, Abdosir and Osirsamar, did not attempt a beautiful statue of their great national god Melqart, but contented themselves with a cone-crowned plinth which the first stone-cutter they met with was able to make.*

Whether the Phœnicians felt that something better was expected, and even needed, than the commonplace, though mystic, emblem which they had adopted, is uncertain. Knowing, however, the art of Babylonia from old time, they turned to the Egyptians for their artistic education. And here it is worthy of note that they did not borrow from them, as they might have done, the gods with the heads of all kinds of beasts, in which the Egyptians delighted, but divine types taken from the human form. From every point of view this was an improvement, for they made their deities as frankly manlike as those of the Greeks.

The cone representative of the divinity is seen in the picture of the temple of Byblos (Gebal), towering high above the entrance of the great courtyard.† This cone, though found in Carthage more often than in Phœnicia itself, must have been at one time very common as a symbol in that country. Probably some would regard it as of phallic origin, but that seems to be doubtful. It is not impossible that it had some connexion with the small *cippi* with an ovoid top found at Sidon.‡ These also recall the objects with pyramidal or hemispherical tops* found at Tharros, one of which,† adorned with the sun and the crescent moon reversed above it, is flanked by two truncated cones with mouldings at the top. In connexion with these cones, it is noteworthy that Esarhaddon possessed a large clay seal,‡ formed like half an egg, upon the flat face of which is a cone surmounted by a bird, recalling the similar objects set up in the temples of Aphrodite at Cyprus.§ This, whilst showing a connexion between the cone and the hemisphere, at the same time suggests that they are of different origin.

Esarhaddon's half-egg seal, besides giving the cone with the dove on it, has, on one side of that emblem, the sun as an eight-rayed star, and, on the other, the moon and seven globular objects, emblematic of the seven planetary bodies, which, in all probability, corresponded with the seven deities whom the Assyro-Babylonians called the *Igigi*. As the sun and the moon are often represented on the votive inscriptions of Carthage,‖ it is probable that these emblems also occurred very frequently in the art of the Phœnicians in their own country. Other emblems, however, accompany them—the triangle emblematic of the cone, the top finished with arms (bent at the elbow and directed upwards), and a circle at the top of the cone representing a head; ¶ the raised right hand, palm outwards; ** the candelabrum surmounted by a pyramid; †† the staff with a globe at the top surmounted by the broken ring emblematic of the crescent moon when a mere broken circlet of light; †† the plinth with the three truncated cones †† (apparently simplified forms of the two with cornices, flanking one with a pyramid on the top, already described). Such are the simple representations of the divine which the Phœnicians, apparently when uninfluenced by the nations around, produced. It is possibly an augmentation of the feeling of powerlessness in representing the deity which made their relatives and near neighbours, the Jews, go a step further, and seek to discard every image which might seem to recall idol-worship. Even a symbol derived from a living creature was a thing to be avoided.

As a type of a male divinity more or less Phœnician in character may be mentioned Baal Hammon, who, in a terra-cotta figure belonging to the Barre collection,‡‡ appears as a man in the flower of his age, with ram's horns on either side of his head, his hands resting on the heads of the rams which form the supports of the arms of his throne. A terra-cotta figure seated on a throne seems to show Tanit, his consort, the Astarte of Carthage, holding a dove in her left hand.§§ This is very roughly formed, and was apparently one of the little statuettes made in great numbers for exportation. A strange creation on the part of the Phœnicians was the pigmy-god—a little man with exceedingly short body and legs and a very large head, holding in his left hand a shield of curious shape.‖‖ These are said to be the dwarf-gods which became the pigmies of the Greeks.

‖‖ *Ib.* fig. 22.

The inventive powers of the Phœnicians therefore tended towards the grotesque rather than the dignified and serious, and they were at their best as copyists. The upper part of the stele of Yehaw-melek, notwithstanding its weathered state, is a noteworthy specimen of their skill.* It shows Yehaw-melek, clothed in a Persian costume, standing before Baalat Gebal, the 'Lady of Gebal,' offering a dish probably containing the precious things which he presented to her. The 'Lady of Gebal,' however, is in Egyptian form and dress, seated and holding a lotus-staff. In her attributes she closely resembles the Egyptian Isis, and the style of the carving (relief within a sunken outline) shows Egyptian influence. At the top of the stele a mortice-hole indicates where the Egyptian disc with uræus-serpents was placed (probably carved in metal), and from this point curved wings sweep down on each side, like a canopy over the god and the king. A very fine specimen of Phœnician bronze-work reproduced by Perrot and Chipiez† seems to show the same goddess, the style differing somewhat from that of true Egyptian work. There is the disc, with the horns of the moon strangely shaped, surmounting her head, and the uræus rises upon her forehead. Perrot points out that, just as the type of the infant Ptah was appropriated by the Phœnicians to represent their Kabires and pigmies, so they borrowed Isis-Hathor to represent Astarte.

The pigmy-god already referred to‡ seems to be simply an exaggerated type of the Egyptian Bes, which the Phœnicians had also adopted.§ A very fine piece of glazed earthenware is that figured by Perrot and Chipiez in their monumental work (p. 408);‖ and if it really be Phœnician (it was found in Cyprus), it shows an imitative skill such as the cleverest forger might envy. Bes, with feathered head-dress, precisely as found in Egypt, is sitting astride upon a woman's shoulders. The latter, who holds him by the feet, stands upon a little lotus-pedestal, suggesting that the whole formed the top of a staff in the Egyptian style. In the opinion of Perrot, it is the woman's figure—naked, short, and broad—that stamps this work of art as being Phœnician rather than Egyptian.

But in all probability one of the finest efforts on the part of a Phœnician sculptor to produce the type of a divinity is preserved on the Stele of Amrit, in the de Clercq collection.¶ The owner called it the 'Phenico-Hittite Stele of Amrit,' on account of the group's likeness to certain rock-sculptures at Pterium, where a goddess is shown traversing the mountains whilst standing on the back of a lion. In this case it is a god wearing the crown of Upper Egypt with the ostrich feathers, and a close-fitting tunic in the Egyptian style, with a knotted girdle. In his left hand he holds by its hind legs a lion-cub, and in his right he raises a curved weapon like the so-called 'boomerang,' which the Assyrian hero of the sculptures of Khorsabad, who grasps in his arm a lion, likewise carries. His legs are thick and muscular, as in the Assyrian sculptures, and one foot is placed npon the head, and the other upon the curved tail, of the lion upon which he stands. The animal in question is represented walking over rocky ground, also indicated much in the Assyrian manner. Immediately above the deity's head is the crescent moon with the sun within; and forming an arch above his head, conforming to the shape of the stele, are the drooping plumes of the Egyptian winged disc. Except for the thickness of the legs and the shortness of the arms, the human form is well-proportioned, and the lion also is fairly good. It is therefore a good piece of work, and, whilst illustrating the art of the Phœnicians, is at the same time a symbol of their religion—a Phœnician idea on an Assyro-Babylonian foundation, and a Hittite design in an Egyptian dress.* There is nothing Greek in it—perhaps it was before contact with that nation, as the early style of the Phœnician inscription which it bears seems to imply. According to Philippe Berger, the deity mentioned in the dedication is probably Shôrbêl—a reading which Clermont Ganneau admits as possible, although he himself is rather inclined to read Shadrapha (Satrape).

There is naturally some doubt as to how far the Phœnicians, when they came into contact with the Greeks, imitated their art. That there are objects in the Greek style which are due to Phœnicians is undoubted, but they may have been merely ordered from Greek sculptors. This is well illustrated by the coin figured by Donaldson in *Architectura Numismatica* (No. 20),† where, in a Greek temple with a strangely un-Greek fan-shaped pediment, a winged Victory in purely Greek style, mounted on a pedestal, crowns with laurel a princely conqueror, equally Greek, holding a crozier. In fact, the whole coin may have been by a Greek engraver. A votive stele representing a shrine,‡ which was found at Carthage, and is now in the museum at Turin, is regarded as being purely Greek work. The goddess is Persephone Cora, veiling herself as a bride, and holding in her left hand a basket of pomegranates. In the pediment above is the panther of Dionysns. Though dedicated by Melekiathon the Suffete, not only the art, but also the subject, is Greek. In Cyprus the story of Hercules was probably a favourite subject, as certain objects illustrating his tenth labour, the carrying away of the flocks of Geryon, show. In the bas-relief,§ Hercules is represented with considerable artistic skill, but the statues‖ are inferior, though some are not without merit.

The statuettes representing the worship of the power of reproduction are, as usual in the East, not in the best style of art. The mother goddess, as Perrot calls her, whether holding an infant or not,¶ is represented as thick and heavy; and the women pressing their breasts **—reproductions, perhaps, of votaries of Astarte—are far from being equal to some of the figures of a similar nature found in Babylonia. Certain figures thought to be Phœnician prototypes of the Venus de Medici are regarded as later than the Greek period, and therefore due to Greek influence. They show a female pressing one breast and hiding with the other hand the part which, in real Phœnician work, the artist intended to show openly. The best specimen †† is from Livadia, near Larnaca, and wears an Egyptian head-dress. In the purely Semitic figures, there is a direct and naïvely brutal allusion, as Perrot says, to the mysteries of fecundation and generation, but the thought which the Greek artist wished to awaken was quite different; it was Venus ashamed—the representative of woman.

Religious ceremonies are rare. One—that representing Yehaw-melek before the 'Lady of Gebal'—has already been referred to. Another—a mere fragment—seems to be simply a mural decoration.‡‡

†† *Ib.* fig. 382. ‡‡ *Ib.* fig. 81.

It was found in the neighbourhood of Tyre, not far from Adlun, and represents a personage, seated on a throne, holding in the left hand an object which cannot now be determined. Before him is a candelabrum or stand surmounted by a pan in which a flame is seen, whilst beside the throne or seat is a head with Egyptian head-dress, evidently part of a sphinx as supporter. The border-ornament recalls some of the designs of Assyria. This piece is extremely good, and shows what the true Phœnicians were capable of. Of an entirely different style is the statue of the Sacrificer, in the Metropolitan Museum, New York.* This shows a beardless man, with plump cheeks (perhaps a eunuch, as the Babylonian priests seem sometimes to have been), carrying a ram for sacrifice upon his shoulders, the feet, which come down in front, being held tightly and determinedly with both his hands. The style is that of the artists of Cyprus.

Greatly affected by the religion of the nations around, the Phœnicians absorbed from them ideas which they carried beyond the limits of their own domain. Strangely susceptible, they in like manner were strongly influenced by the religious art of their neighbours, which, when they migrated, they carried to other lands and modified. A series of different styles was the result, and the task of studying and understanding these is a long and difficult one. Nevertheless, it is a branch of archæology of considerable importance, though it must be admitted that the material from the various spheres of Phœnician influence is generally insufficient for a complete picture to be gained. The destruction of their temples and divine emblems and statues in Western Asia adds to the difficulty of the study; but the remains, such as they are, have a value quite their own, and reflect the religious feelings of a strong people who accomplished important work in their time. T. G. PINCHES.

ART (Shinto).—The genius of Shinto, like that of Islām, is adverse to the development of the arts of painting and sculpture. With few exceptions, no idols or paintings of the gods are to be seen in Shinto shrines. The deity is represented by a mirror, sword, stone, or other object, which is shut up in a box, and is never seen by the worshipper. In many cases the priest himself does not know what the box contains. In pre-historic times there was a practice of setting up a row of terra-cotta figures of men and animals round the tombs of Mikados, in substitution for an older custom of burying the servants of the deceased and other victims up to the neck, and leaving them to die and be devoured by dogs and crows. Several of these figures have been preserved in the Imperial Museum at Tokyo, and there is one in the Gowland Collection of the British Museum. They are of an extremely rude and primitive workmanship. This practice, however, does not appear to have given rise to a school of glyptic art, and in any case it is not directly associated with Shinto, which abhorred all connexion with death. In more modern times there is a custom of expressing gratitude to the Kami for answered prayer by making *ex voto* offerings to the shrine of pictures representing miraculous escapes from shipwreck, etc. Several of the more important shrines have galleries for the reception of such mementoes. They have no great importance in the history of Japanese art. Such galleries are called *emado*, or 'picture-horse hall,' one of the most common pictures being that of a horse—in substitution for the real living horse, which is a favourite Shinto offering. The 'seven gods of good fortune' are a common subject for the Japanese artist, but here we are dealing with quite a modern development. Nearly all of these deities, though called *Kami*, are of Buddhist origin, and in their portraiture foreign influence is easily traceable. At the present day Shinto myth is not infrequently resorted to for subjects by the Japanese artist, more especially by the book-illustrator; and wood engravings, of no great artistic value, representing the gods are sold to the pilgrims to Shinto shrines as mementoes.

W. G. ASTON.

ART AND ARCHITECTURE (Teutonic).—The antiquities from Northern Europe give evidence of a high artistic development from the Stone Age downwards, but few finds of earlier date than the Iron Age can with any certainty be connected with the religious life of their owners. Of the heathen period there are no architectural remains except the graves, and the structural forms of these do not appear to have had any definite relation to the religious beliefs of the different periods to which they belong. Sacred buildings of any kind came late into use among the Teutonic races, and the scanty knowledge we possess of their temples is derived entirely from literary sources, and refers only to the last few centuries of heathendom.

1. In the Stone Age the antiquities as a whole show a remarkably high development of art. The elaborate finish of the finest examples in both pottery and weapons may imply that they were not intended for ordinary purposes, but were reserved for religious ceremonies.

Many of the axes found are obviously not made for use. Some are too thin, others too small, others have shaft holes only large enough to admit a cord, and miniature axes of amber are also common. All these are doubtless votive offerings of some sort, in all probability dedicated to the god of thunder.

2. The Bronze Age in the North is also distinguished by the artistic skill of its productions, but foreign influences may now be recognized. At first the types resemble those found in the Ægean area, and the spirals and zigzag lines so common in Mycenæan art are a frequent form of ornamentation. The most notable relic of this period is the 'disc and horse of the sun' from Nordseeland, Denmark, usually dated about B.C. 1000.

It consists of a round bronze plate mounted on wheels and drawn by a horse also on wheels, and is, no doubt, intended to symbolize the sun's passage across the heavens. The face of the disc is overlaid with gold and ornamented with spirals, and the figure of the horse strongly recalls the animals of the Dipylon style of Greece.

At a later period of the Bronze Age there are evidences of Etruscan influences in the art, and many objects have been found that are clearly imported from Etruria. Among those of native workmanship are a number of beautiful gold vessels which seem too precious for private purposes, and were probably dedicated to religious uses. Such are the eleven gold vessels with long handles that were found at Rømminge, carefully placed inside a large bronze vase, and the two gold bowls with similar long handles, terminating in horses' heads, found with a couple of smaller gold bowls in Seeland. Other objects certainly connected with the worship of the gods are the little bronze cars on four wheels, apparently made to carry large sacrificial vessels, from Sweden, Denmark, and North Germany.

Religious symbols were frequently used in the ornamentation of the Bronze Age. The wheel cross, the symbol of the sun, occurs first in the Stone Age, and is found on many of the earlier objects of bronze. It is later replaced by the

swastika,* and the *triskele* also appears, both of which symbols are common to all the Aryan races, and are universally agreed to have a religious signification. These same sacred signs are seen on the rock carvings from Behistan and elsewhere, which belong to this period. The purpose of these carvings is not clear; they consist of geometrical figures, ships, weapons, and other objects, animals and persons, and it seems probable that at least some of these represent the gods and their attributes.

3. In the first centuries after the introduction of iron the grave finds are scanty, and there is a scarcity of gold objects. This is partly due, no doubt, to the fact that the tribes of the North were at this time subjected to a strong Celtic influence, and it was the universal custom among the Celts to bury little else with the dead than their mere personal equipment. This Celtic influence introduced foreign elements into the style of the art, but was soon almost entirely supplanted by the spread of the classical culture due to the Roman conquests in Central Europe. Many of the finest antiquities from the graves and the bog deposits belonging to the first four centuries of the Christian era are unmistakably of Roman workmanship.

The most important of the native works of this earlier Iron Age appear to be connected with religion. Of these the earliest are the two four-wheeled chariots with long shafts, found in a bog at Deibjerg in Jutland. They are made of ash-wood, and the sides, shaft, and frame are richly adorned with bronze-work. The *swastika* is among the ornaments used. These cars are supposed to have been employed in religious ceremonies, and possibly to have been sacred carriages for images of the gods, such as are mentioned later in the sagas. Fragments of a similar one, however, which had evidently been burnt, were found inside a large bronze vessel in a grave at Fynen, so that, in this case at least, the car seems to have been given not to the gods, but to the dead man for his use in a future life. Cars have been found under similar circumstances in Celtic graves in France and the Rhine country, so that the peculiar disposal of the Fynen car may be due to imitation of a foreign custom.

Somewhat later in date, and showing a mixture of Celtic and Roman influences, is the beautiful silver bowl from Gundestrupp in Jutland. This was, no doubt, a sacred vessel, like the gold bowls of the Bronze Age already referred to; and we may compare in this connexion the statement of Strabo (p. 293), that the Cimbri sent their 'holiest bowl' to Augustus. Other bowls of similar shape to the Gundestrupp bowl have been found, but although it was in all probability made in the North, it is quite un-Northern in both style and subject. The subjects are drawn partly from classical art (there is, for example, an obvious imitation of Hercules and the Nemean lion), and partly from Celtic sources, as the representation of the Gallic god Cernunnos, with his stag-horns, ring, and serpent.

4. To the close of the Roman period, *i.e.* to the 4th cent. A.D., belong what are perhaps the finest of all the Northern antiquities—the two magnificent gold horns from Gallehus in Jutland. It is supposed that they were used as trumpets in religious services, and parallel instances can be quoted from many peoples of antiquity. Both the horns are of solid gold, and decorated with bands of carved figures; one has runes around the top, but these give only the maker's name. Both were incomplete when found. The significance of the figures upon them is not certain; various explanations have been given, and it seems probable that they have a mythological meaning, and refer to legends of the gods.

5. The later centuries of heathendom in the North may be divided into two periods: (*a*) a time very rich in gold ornaments of every kind, owing to the vast quantities of gold obtained from Byzantium; (*b*) the age of the Vikings, to which belongs the splendid profusion of silver ornaments to be seen in the museums of Copenhagen and Stockholm.

(*a*) In the first of these periods, *i.e.* from the 4th to the 8th cents. A.D., the only objects that appear to have any close connexion with religion are the gold bracteates. These were worn as pendants and necklaces, and were originally copies of Roman coins of the 4th cent., although the types soon became greatly altered, and the later bracteates appear to have a religious signification. The sacred symbols of the *swastika* and *triskele* appear on many of them, and when placed beside a human head may imply that a god is represented. The most common device is a head above a four-footed animal, and in some cases the latter seems to have a pointed beard and to be intended for a goat, an animal sacred to Thor. On others Odin is possibly to be identified, surrounded by snakes, or riding on his horse Sleipnir, with a sword in his right hand and a spear in his left, and fighting against the Midgaard serpent. Other bracteates have interlacing designs ending in animal forms—which shows that the beautiful animal ornamentation, which was elaborately developed later, already existed. This peculiar style of decoration, so characteristic of the later Northern art, seems not to have arisen from a desire to represent the animals sacred to the gods, but to be derived from creatures unfamiliar to the North, namely, the lions and griffins of classical art.

(*b*) When we reach the second, or Viking, period of the later Iron Age, we have evidence from literature, as well as from antiquities, of religion in art. Of the antiquities, the most important are the runic stones that were set up over the graves. On some of these are figures which appear to depict the gods; for example, a stone from Tjängvilde shows a figure riding on a horse with eight legs, probably intended for Odin on Sleipnir; and on the Sanda stone there are three figures in a special panel, which have been interpreted as the three chief gods, Thor, Odin, and Frey. On many of these stones Thor is invoked in the runes, and his hammer is carved to consecrate and protect the grave. Little silver pendants in the form of hammers have been found, and were doubtless worn as amulets, but these do not appear until the 10th cent., and were probably due to the influence of the cross-wearing Christians.

Under the head of amulets may be reckoned the figure of a boar, which was frequently placed on the crest of the helmet for protection in battle. This custom is referred to by Tacitus (*Germania*, 45), and there are several allusions to it in *Beowulf* (*e.g.* 303, 1113). It should presumably be connected with the golden boars of Frey and Freya mentioned in the sagas.

Two warriors wearing helmets surmounted by figures of boars are represented on one of four small iron plates from a cairn in Öland. That these plates were used to adorn helmets is evident from the similar bronze plates on the helmets from Vendel. The examples from Öland, as well as the majority of those from Vendel, are supposed to portray scenes of Scandinavian mythology. Thus

* The *swastika*, or cross with bent arms, in its simplest form appears thus , but is often elaborated into . Similarly the *triskele*, the three-armed figure, from , becomes .

one of the Vendel plates shows a cavalier armed with shield and spear, preceded and followed by a bird, and attacking a serpent; this is interpreted as Odin with his ravens Huginn and Muninn, and may be compared with the gold bracteate described above.

Regarding actual idols our only information is derived from literary sources. From the sagas we gather that the figures of gods set up in the temples were life-size, made of wood, and richly adorned with gold and silver. Thus in Olaf Tryggvason's saga, when Gunnar fought with the image of Frey and drove out the fiend inhabiting the idol, 'nothing remained but the mere stock of a tree,' and Gunnar, dressing himself in Frey's apparel, was accepted by the people as the god. Again, in the saga of Olaf the Saint a figure of Thor is described as 'a huge man's image gleaming with gold and silver . . . he bore the likeness of Thor, and had a hammer in his hand . . . he was hollow within, and had a great stand on which he stood when he came out.'

Other images are described as wearing bracelets, necklaces, and similar ornaments. The different gods seem usually to have been invested with their own peculiar attributes—Thor with his hammer or with sceptre as chief god, and Odin armed with sword and spear.

We also hear of smaller figures of the gods, such as the image of Frey which Ingimund carried in his pocket, and the ivory image of Thor which Halfred was accused of secretly carrying in his purse.

6. Turning to the heathen architecture, what knowledge we possess of the temples is gleaned from the literature of the North. Until the last few centuries of heathendom, the Teutonic races appear to have worshipped in the open air, Tacitus (*op. cit.* 9) saying: 'The Germans deem it inconsistent with the majesty of their gods to confine them within walls.' The temples that we hear of in the sagas apparently consisted of two parts: an oblong hall, the *langhús*, with an apse-shaped building, the *afhús*, at one end. It is possible that these two parts were originally separate, and that the round form of the *afhús* is due to its having taken the place of the sacred tree that was, in earlier times, the centre of worship. In this case the *langhús* would represent the dwelling of the chief (who officiated as priest) beside the tree. This *langhús* appears to have been copied directly from the simplest form of dwelling-house, and was used for the sacrificial feasts, but possessed no great sanctity. The *afhús* was the sanctuary proper, and contained the images of the gods, among whom Thor always occupied the chief place. Here also were the altar with the oath ring, the blood kettle, and the perpetual fire.

The temples were almost always constructed of wood, but the exterior as well as the interior was doubtless often ornamented. Adam of Bremen describes the chief temple of Sweden, that at Upsala, as a magnificent gilded structure. When Christianity finally drove out the old superstitions from the North, the temples were in most cases pulled down and destroyed; but the sanctity of the sites remained, and many Christian churches still mark the spots where the heathen gods were originally worshipped.

LITERATURE.—In addition to frequent references throughout the sagas, special mention may be made of S. Müller, *Nordische Altertumskunde*, 2 vols., Strassburg, 1897-98, and *Urgesch. Europas*, Strassburg, 1905; O. Montelius, *Die Kultur Schwedens in vorchristlicher Zeit*, Berlin, 1885; J. Worsaæ, *Primeval Antiquities of Denmark*, London, 1849; G. Vigfusson and F. Y. Powell, *Corpus Poeticum Boreale*, Oxford, 1883
